Hi all,

anyone know of a good source for information on Collins rigs?

I am looking into obtaining a Collins transceiver.

Also, Is this the place to talk about Collins, or is there another
ng?

Or, another possibility I'd like to check out is the military
AN/GRC-106 (complete) if someone knows about where I can find
one of these..

>may not be an issue).

Hello Michael,

There are several things to think about here.

The first is that the 753 (we used to say "seven-drifty-three") uses a dual range, bandswitched VFO. Here's how it works:

The 753 is single conversion, with a 5.2 MHz IF.

On 80 and 20 meters, the VFO tunes 8.7 to 9.2 MHz
(8.7 minus 5.2 equals 3.5, 9.2 minus 5.2 equals 4.0)
(8.7 plus 5.2 equals 13.9, 9.2 plus 5.2 equals 14.4)

On 40 meters, the VFO tunes 12.2 to 12.5 MHz
(12.2 minus 5.2 equals 7.0, 12.5 minus 5.2 equals 7.3)

All numbers are approximate - it's been a LONG time since I was near a 753!

Analog VFO stability decreases rapidly with increases in frequency. Bandswitching only makes it worse. The components used in the 753 design are simply not up to the job.

It was common in those days to use the reverse breakdown of transistor junctions as Zener diodes. They were pretty poor Zeners!

All of this adds up to a really tough redesign job, and there's no room in the cabinet for a really good VFO anyway.

Your external idea is the way to go. You need two different output ranges, as above, which complicates matters somewhat. The easiest thing to do is build two separate VFOs - one for 80 and 20, the other for 40.

If you decide to go the analog VFO route, here's a tip: Look around for one of the surplus tuning capacitors from the ARC-5 transmitters, or from a BC-221 or LM frequency meter. Don't hack up a good one to get the part - there are plenty of junkers out there that are all chewed up but still have good caps in them. These big capacitors have built-in 100:1 gear reduction drives that make most ordinary dial mechanisms look sad. You will need a hefty chassis to hold one, but if you like old gear, metalwork is part of the game. They are not small, so make the VFO big and solid and get the biggest tuning knob you can get your hand around. Don't pull plates out to reduce capacitance - if you put the cap in series with a good silver mica of about 100 pF, the result will be an almost linear dial.

WARNING: These old capacitor/gear drive combinations, when properly built into a VFO and lubricated, have a feel to them that is positively addictive. You will be totally spoiled and won't want to use anything else. I know - my homebrew rigs have dials of this sort.

>The author does mention putting two .001uF capacitors in series between
>the 7360 balanced modulator plates and the crystal filter (apparently this
>is a direct connection originally), to "prevent oscillation and make it
>easier to obtain carrier balance when there are slight changes in voltage,

>capacitor and an 1800 ohm resistor in parallel with the existing RC
>network in the cathode of the 7360.

The 7360 is a unique type of tube that has some odd characteristics. You might want to do a dejanews search for some posts that KK6GM and I did. Search on "7360 tube" and they should come up. Some VFO stuff in there, too, and a description of my homebrew setup.

2692. 7094-What Plate Cap.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-17 00:00:00 UTC
From: avitko@harris.com
Message-ID: <7aehn1$v6j$1@nnrp1.dejanews.com>
Source record: 89476

Does anyone know what type of plate cap fit on a 7094? Also, anyone know who might have one?

Thanks, Al

2693. Re: EICO 753 VFO Drift, again

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-17 00:00:00 UTC
From: Dave Edwards <ham@cybercomm.net>
Message-ID: <7aeitg$i6i$1@ostrich.cybercomm.net>
Source record: 89477

Who was the chap originally looking for this info on the
753 drift?
I mentioned I have a service note from Eico on taming the
VFO drift.
I am involved in a move, and it is a little tough to keep up
on email.
Thanks...Dave

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
I'm also including an MFJ 941-c antenna tuner and a
Kenwood noise cancelling hand mic, so this is a complete
station expect for the antenna (longwire or dipole would work
fine) and a key. $350 for the whole setup. The rig ALSO
has the optional Kenwood 500hz CW filter in it.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

Hello, everyone, I have a mint shape HW101 (from Heathkit) to give to a new home. The unit doesn't have a vfo, but everything else in installed. The unit was put together by Heathkit many years ago, used for about 100 hours, then the vfo was removed(I was helping a friend out with his unit and gave him mine).

The chassis is mint, contains all tubes, parts, etc...anyone like to have this piece of history? Well, you pay shipping and the rest is yours...(free).

Oh, the YL says.."Better Reply Quick, otherwise it goes to the recycler!", isn't she great!

Thanks Everyone,

Lee

A good thing about PBS, they offer video taprs of all these programs like The American Experience.
I saw this broadcast and it was very interesting. Although the Repbulic was sinking, the passenegers and crew would have been saved anyway by boarding the Florida. The wireless operator was just somebody the New Yorkers picked to hail as a hero.
The saddest thing is that congress wouldn't listen to appeals for radio requirements for ships at see. My father often talked of the Titanic, as he was only about 10 when the ship went down. There seemed to be a string of misfortunes that caused so many to drown with the Titanic. The Californian was only 10 miles away and saw the Titanic flares, but Titanic had only white flares, not the red ones to signal distress. The Californians radio operator had closed shop only minutes before Titanic called for help.

Jusssssst.... kiddin...!!! Have copy of tape and included "Abandon Ship" which was part of the Nova miniseries on accidents... Quality is P4.5 as I live about 45 mi from the Cedar Hill transmitter site.

Send $3 to cover shipping to:

Bismarck Wichy
WD0HCO
5129 Pruitt St.,
The Colony, TX 75056

...and send $15 to your local PBS station... it's a good program... it's worth it... otherwise Rich people running corporations will sponsor programs like "Mobile Masterpiece" from third rate countries like the U.K.

Clearly a lot more historical programming of this nature is needed. Much of our history is slowly disappearing along with the people that made it. I would like to see programs on Marconi, DeForest, Armstrong, and the early days of broadcasting. I believe at one time, Marconi LTD wanted to auction off all of Marconi's notes and instruments he left behind to make more office room. Luckly, the world cried out and his equipement was saved instead of being scattered to the four winds.

So pay up... I did... Reward PBS when they do good!

Hopefully we can stop bad British actors from murdering well written plays.... I prefer to watch really bad over paid American actors murdering well written plays....

Hams watching Hams if you will.......

- WD0HCO -

2720. Trouble modulating old AM tcvr

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-18 00:00:00 UTC
From: Joel Govostes <jgovost1@twcny.rr.com>
Message-ID: <36CC3325.A515737B@twcny.rr.com>
Source record: 89299
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

Having difficulty with modulation of the final amp of a 1960's era,
tube-type AM transceiver.
Modulation extremely low on the output. Not sure just why. Here's
something I've noticed; perhaps it could be diagnostic(?):

When I key the mic, the output level shoots right up, as read on a field
strength meter, but
immediately starts dropping back down gradually. Within seconds it
reaches a
final value partway down scale from the original instantaneous "peak,"
where it
remains. If I un-key the mic, and wait a couple seconds, then key up
again, I see the
instantaneous peak once again, followed by the drop. I do not see any
peak if
the mic is keyed rapidly in succession.

Besides this, I notice that the fluctuation on the rig's rel. pwr. meter
is only slight, while speaking/knocking/tapping the mic. There should
be a much more noticeable "flicker" on
the meter reading, according to the manual. What fluctuation there is,
is swinging *downward*,
instead of producing any increase in the relative pwr. output.

Any suggestions as to what might be going on here? The rig is a '60s
Lafayette, (HE45b, 6m): 2E26, plate modulated, single-ended mod.,
connected quasi-Heising style thru secondary of AF output tfmr).

Grateful for any help on this;

tnx vy
JWG

Bill - KB3PT

You must not be checking your email, so I'm resorting to a bandwidth wasting general NG posting in desperation (- Sorry, everyone else -).

We are VERY interested in purchasing the transmitter you mentioned in your email, but you didn't respond to my email, and you neglected to give me any other way to contact you.

Please send me a voicemail or email with your telephone number, address of your store in Wheaton, etc. I am often not at my desk, so just leave voice mail. I'll get back to you.

Sorry to keep bugging you, but we only have a short time window to do this project.

Let me know what's up.

Thanks,

Tom

PBS had a program about Sarnoff, deForest and Armstrong within the past ten years. It was called "Empire of the Air" (I think I got that right), and the program itself was done by Ken Burns of Civil War fame. There's a book with the same name, someone named Lewis (I think his first name is Tom). I'm not sure if the program was based on the book, or the book is a companion to the program.

Both the program and the book were pretty good. I finally read the book last summer (it was at the library) and it was good in that it covered the area where the three overlapped.

I thought PBS had become pretty good at making videotapes of programs available. They often promote the video at the end of the program. Contacting PBS might uncover that Empire of the Air and the recent show are readily avaiable for a fee.

2729. WTB R390 connector

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-18 00:00:00 UTC
From: Dan Davenport <w5vj@swbell.net>
Message-ID: <36CC63E8.435A@swbell.net>
Source record: 89308

The rear of my R390 has has a connector for a "whip". It looks like an overgrown BNC bayonet type government job. I need to hook an antenna to it.

Does anyone have an adapter that'll take this to a UHF or N type? Barring that, just a plug I can solder to a piece of 52 ohm coax would work. Mail server has been in the ditch, reply might be slow.

Thanks to all.

Tough one.

Plate Modulation is not quite the same as Heising Mod.

The "Peaking" just might not be related to the Mod. Have you tried a key? (cw)

I remember the Lafayette rig, and as I recall the mod was normal, but not great.

"downward" indication during modulation is not necessarily abnormal.

Best suggestion is to try to listen to yourself, or better get a local ham to listen and give accurate description of whats happening.

Assume you have made all the usual checks very thoroughly. I often use a large magnifying glass to examine for overheated parts, cold solder joints, etc.

Well, not much help, but do post back and tell us when you locate the problem - then we can all learn something!

<<It's amazing that this topic just came up here on the group. >>

Yep, I know, there WAS a thread a while back, or so they tell me, but I can't recover it from the archives, so I haven't seen any of the posts in it.

My intention here is not to compile a database. I would need a full-time college intern (perhaps Monica Lewinsky is free?) to help me do that. But I AM posting the responses you send me to a web page devoted to the WPE phenomenon:

http://www.qsl.net/wb1gfh/swl.html

Why? After a search of the entire World Wide Web I could find NOTHING about the WPE program. Since I have some free web space from QSL.NET I figured "it's better to light a candle, than curse the darkness" etc.

Anyway, apologies for clogging up REC.BOATANCHORS with this stuff but, judging from the responses I got, the folks who read this newsgroup just happen to be the perfect demographic for WPE'er...mostly baby-boomers who got their first taste of radio in the 1960's.

The connector is a type "C". Adaptors are available from any of the national wholesale houses. For a C to N adaptor, the price is about $15. C to BNC, about the same. If you get desperate, try the "RF Connection" in Gaithersburg, MD (ac 301). Joel does have what you want.

I have the following heathkit stuff for sale.
All units include documentation (either copies or originals).
Will make deals if you want multiple pieces.

SB-104A (original 104 with the 'A' retro kit installed).
Has nice narrow CW filter and NB. With matching SB-604
speaker/power supply. Unit works and is very clean.
$450.00 shipped (it weighs a ton)

SB-104A (a real one). With matching SB-604 speaker/
power supply. Unit works and is very clean.
$400.00 shipped (it weighs a ton too)

SB-644 external VFO for the 104. Works, clean, with cables.
$100.00 shipped (it's light)

SB-634 station console. This is the unit with a phone patch,
clock, ID timer, watt/swr meter. The unit is clean and works
but the ID timer LED's have deteriorated badly - they work
correctly but are almost impossible to read.
$100.00 shipped

(please email)

Bill,

You are missing the point. It's not a bait and switch tactic. He said he is not a dealer and probably has no idea regarding the FA or EBAY suggestion in the header of a message protocol. Also, Bob started the namecalling by #1 implying the seller was a bait and switcher #2 implying he was greedy and #3 sticking his nose into someones legitimate ad like he is some kind of amateur price policeman. And #4 complain to eBay? They make $$ advertising peoples items, do you honestly believe they will drop a paying customer for advertising his item on a newsgroup?? Get a life. If you don't like the ad, don't read it. For everyone who doesn't like eBay, there are two who do. Check the NYSE and knock off the eBay bashing. It's a new way to sell to a large group of potential buyers. PERIOD.

2751. $501 Viking II and the Price Cops ..

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-18 00:00:00 UTC
From: Larry W9MDX <net1@netohio.com>
Message-ID: <7aipb8$q9d@news.dx.net>
Source record: 89330

Just when I thought this rediculous thread had run it's course, I decided to check EBAY to see if any Viking II's had ever been at auction. Considering all of the ranting of the price cops it was interesting to see that one had indeed been up for auction and it sold for $501 after 14 individuals bid on it. Consider that the PC had anyone who thought the Viking II was not worth more than $150 in straight jackets, it was interesting to see that it went back up for auction and there were another 12 bids before it sold for $425. They must all be dealers!!

So even if we consider that the auction had a lot to do with it, let's say cut the $501 in half, the price cops are still about a hundred bucks off what might be considered a good selling price ... for a MINT Viking II. So all of you price cops out there, if you want a MINT Viking II, dig deep cause it's gonna hurt you .. or settle for a beat up piece of crap for a $150 and spend the next 5 years pumping money and time into it trying to make it look and work something like the one that got away! RODNEY!!

Gary:

I'm afraid you've accidentally stepped into a cultural combat zone. One group of believers wants to keep all commerce off this newsgroup and an opposing group of equally rabid believers want to post and read sales postings. Unfortunately, this has led to the situation where an honest mistake is seen as a deliberate assault on the integrity of the newsgroup.

This should have been handled by sending you a polite note informing you of the accepted practice on most radio newsgroups. When selling an item by auction please put "FA" or "For Auction" or "For sale on Ebay" in your message header instead of "FS" or "For Sale". This will allow the quick-draw flamers to ignore your message. It may or may not stop the flames however.

Best regards,
Ron Hershey

Hey Bob, it sounds like it is for sale to the highest bidder. Did you want him to sell it to the lowest bidder? eBay makes good sense for the seller. He is able to put his item in the hands of the person who wants it most and is able to pay for it. Technology is a way of life. Time to get used to it. Why would anyone in a capitalist society criticize someone for making a sound business decision? Are you a communist? Do you think he should "give it away" to someone because they like to pay low prices? Buyers on eBay are able to afford what they want. They see it, they buy it. It is very simple. If you ever bought anything at an auction, you would know it is the most democratic (American) and capitalistic (America's tried and true method of doing business) way to buy and sell anything. People who criticize others for using eBay are idiots and against American Capitalism... That means YOU Bob Plumskey!

It dosen't seem to be as bad in this newsgroup as a lot of others, but
the ebay teaser ads seem to be increasing. Some newsgroups are now so
overrun with these ebay teasers to the point that the group is almost
usless for their intended purpose of discussion. I have been forwarding
all ebay teasers to safeharbor@ebay.com with a complaint. Maybe if
enough do this, ebay will get the message out to their members and
unregister those who get complained about a lot.

2760. Re: WPE swl callsigns

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-18 00:00:00 UTC
From: "J. Lee Smith" <ckvnfm@mb.sympatico.ca>
Message-ID: <01be5aeb$d2a81dc0$9e34c8cd@ckvnfmmb.sympatico.ca.mb.sympatico.ca>
Source record: 89370

Well Folks, I'll add my story to the list of (now) almost-old geezers who revelled in the WPE Program. I am from South Western Ontario originally, and was assigned VE3PE1ZE, and still have the certificate in pretty nice condition!

Now I'm VE4ANC, located just west of Winnipeg, Manitoba. The rig has sure changed since then! At the time, I was using a converted second world war aircraftradio...the Bendix RA-10-DB. My dad had done the conversion to 110 VAC but transformer was undersized. When I ran it in the summer. I had to have the rear of the chassis hanging outside on the windowsill to avoid overheating the transformer and blowing the fuse during daytime DX'ing!!! At night it was cool enough I could drag it inside so the mosquitoes didn't get into my room.

Then I finally had enough paper route money to pay $25 for a converted Marocni R-1151 which purportedly came from a Lancaster bomber.....that was a lot of papers delivered, lawns cut, and money begged from Gandma, to get that radio.

Many, many, rigs later, I am now into Collins equipment....saw my first one when I was about 12....couldn't imagine the kind of job someone would have to have held to afford one. It would have been about 115 years worth of paper route money!

I am still very interested in radio, and own a low power FM station. You can see the site....and some good antenna/transmitter picures by looking at:
http://www.ckvn.com

All the best! 73 de
Lee Smith
VE4ANC

I agree with what I felt was Bob's point (and disagree with your
reply's inferences and unnecessary name-calling; i.e. "idiots").

Seems to me Bob was making a point about the eBay "bait and switch"
pointers seen frequently here...messages which probably do more harm
than good to sellers. The original SX-28 ad was of interest to me
when I noticed the subject line; after reading the entire message,
I decided I wasn't interested in bidding upon or buying that SX-28
from that particular seller. My decision had nothing to do with
eBay; it was made simply because I'd rather buy from someone who's
"honest and up-front" about advertising their item(s) from the very
start...regardless of price, method, or terms of sale.

2773. FS: National NCX5

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-19 00:00:00 UTC
From: w9zr@aol.com
Message-ID: <19990219153913.00958.00000236@ng-fd1.aol.com>
Source record: 89134

I have a NCX5 that looks very good but I am selling as is because I do not have the
power supply to check it out. Only obvious problems are the main tuning knob needs some tlc and I do not have a manual. Very few small scratches. $150 plus ups.

2774. FORSALE - MINT Kenwood TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-19 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7akj6t$mde@nntpb.cb.lucent.com>
Source record: 89135
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ 941C antenna tuner.

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

I bought a Viking II & VFO some 9 years ago at a Hamfest and restored it; then sold it for about $175.00. I believe that I paid less than $50.00 for it at the Hamfest. It was a mess even though it was a factory-wired model. I recall having to replace the 160 meter coil amongst other things.

Then several years later I purchased another one with the 122 VFO and restored it and I still have it.

As far as price is concerned I must point out that properly restoring Vintage Ham Gear is a time-consuming labor-of-love that requires a variety of special skills both electrical and mechanical as well as access to parts and information not readily available to would-be collectors who have better things to do with their free time. In other words, if the receiver or transmitter has been faithfully restored by a dedicated expert skilled in the art, then the high prices are in my opinion totally justified.

The fact of the matter is that the reason old Ham gear is often found at low prices in miserable condition is a reflection of years of improper maintenance, modifications, fixes and other screwball butchery at the hands of "amateurs" who hardware skills were sorely lacking.

Keep in mind that the Viking II dates from the late fifties/early sixties era almost forty years ago. Any Ham Gear 40 years old in top condition is worth a lot more than the asking price at a Junkfest.

I have a COMPLETE SET of QST magazines from 1980 through 1994
(15 years, 180 issues!) that I need to sell. I'd love to
keep them but just don't have the room. They are in very
good condition. This is a fantastic resource for anyone who
is seriously interested in Amateur Radio.

I am now taking bids on them. I will only sell as a complete
set, buyer picks up (NJ) or pays shipping. I'm thinking that
the minimum bid should be about $180 (ie, $1.00 per issue).

Please respond if your interested.

Thanks.

No idea Frank. The ruler I used only gives standard measure.

(5.5cms is about 1.58 inches)

The 400 was Swan's first (1964) full-coverage (80-10) transceiver. Few remain, and most that do are in terrible shape. Almost none can be found with all the accessories, which are themselves very rare. This 400 is an 8.5 or better on anybody's scale, however: complete, bright, shiny, and fully operational. What's more, it comes with ALL the original accessories: 117XB power supply/speaker, 420 full coverage VFO, 406 SSB/mobile VFO, 22 VFO Adapter, and VX-1 VOX unit. Own a beautiful piece of ham history. $395 + shipping.

2788. Original of "HRO"?

Just fulfilled a wish first conceived when I was
a teen - to have a National HRO. The one I've
got is in very nice condition, very little
modification and more coilsets than I can count.

Not all that long back, someone posted the legend
of how the name "HRO" originated. But I've totally
forgotten. What was its origin, again?

"Bob Muskie" <muskybob@sprint.ca> said the following:
>Hello...
>I am buying a couple of 12volt 1200MAH batteries for my
>Yaesu FT-530 handheld.Aftermarket..
>When I bought my radio I got a battery charger #NC-18B which
>will charge at 14.5volt 50MA... I know that this charger is good
>for the 12v 600ma batteries that I first had but is it still good for
>the newer stronger batteries??????
>is the charging time just doubled..???
>The charge time for this charger is 15hours for the 12v 600ma..

The MAH batteries will charge fine with the "wall wart" (slow) charger, at
an increased charging time.

The MAH batteries will NOT work with the Yaesu Quick Charger.

Not according to a steel tape measure I've just found, that has those
French units as well as real ones...

5.5 "cms" is roughly 2.25". Your 1.58" is about 4 "cms".

Forget those cheap foreign measuring units and stick with the real thing
:-)

I just found this radio at an estate sale. It's very clean inside and out. Cosmetically, there are no scratches on the face and only a few on the cabinet. Electronically, I can tell you all the tubes light, but besides turning it on, it is untested. Because of its size and weight this must be a pickup. I will be willing to meet someone within 100 miles of my CT QTH. As far as price, I will take the best offer.

Thanks 73s

Just when I thought this rediculous thread had run it's course, I decided to check EBAY to see if any Viking II's had ever been at auction. Considering all of the ranting of the price cops it was interesting to see that one had indeed been up for auction and it sold for $501 after 14 individuals bid on it. Consider that the PC had anyone who thought the Viking II was not worth more than $150 in straight jackets, it was interesting to see that it went back up for auction and there were another 12 bids before it sold for $425. They must all be dealers!!

So even if we consider that the auction had a lot to do with it, let's say cut the $501 in half, the price cops are still about a hundred bucks off what might be considered a good selling price ... for a MINT Viking II. So all of you price cops out there, if you want a MINT Viking II, dig deep cause it's gonna hurt you .. or settle for a beat up piece of crap for a $150 and spend the next 5 years pumping money and time into it trying to make it look and work something like the one that got away! RODNEY!!

Got my mint VII for $100. You'll only have to dig deep if you're foolish enough to do so.

I would like to buy a S-40B in good condition for personal use. I do sell on Ebay and want this one for my collection. I did buy one from a Ebayer and it was hacked all up with cold solder joints and rusted beyond belief. So If you have one let me know what you want. I would like the face in good to excellent condition,however if the case is trashed that is no problem..the radio must work well with good strong audio, tubes can be weak, as a matter of fact I will take it without tubes..state your condition.
Thank you

Gentlemen: I'm sorry if Ioffended any of you by posting this on your ng. I admit I'm not a regular reader of this ng. I just want my radio, that I've owned for 37 years, to go to somebody who might really want it and this was the only way I thought I could let you know about it. I live too far out in the boonies for anybody around here to be interested; I did offer it to our local ham radio group. They told me to put it on eBay. Go figure.

Again, I apologize.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Have for sale or trade or if you kave information about:

Harvey Wells HF Aircraft Receiver AR-10-A (with dynamotor A-11) circa 1944 with:

1) 12 volt Dynamotor AA-11
2) Band Change Unit AA-12
3) Tuning Control Unit AA-13
4) Shock Mount AA-14
5) Electrical Control Unit AA-15
6) Crystal units AA-1
7) some interconnect cables and connectors (not all)

This receiver is powered by 12 volts. I do not know much about it (i.e. what airplane it was used in).
The black wrinkle paint on all units is in very good condition although there are some minor scratches.
Remeber this radio is over 50 years old. It is in clean condition internally and all auxilliary equipment is in
very good to excellent condition. The receiver has two tubes missing, the remainder are present but
untested. The missing tubes are a 6SK7 and 6SN7.

I also have the original Instruction Manual for this receiver, dated January 1944 (a little dog-eared but
complete) and a photocopy of it, so as not to degrade the original any further.

Am looking to trade for any of the following:
BC-348, BC-224, BC-314, BC-312, BC-342, BC-344, or clean unmodified ARC-5 equipment (such as
BC-453s or BC-454s) in unmodified, complete condition.

If interested or if you know where the receiver was used or other information, please contact:
Ned Parkes

Tonite I read the message here from the gentleman who is selling the
SX-28 on eBay. It's apparent he simply did not know about placing
"FA" or "eBay" in his message subject line, and I extend to him my
apologies if I may have offended him in any manner. He was man
enough, and courteous enough, to clarify his misunderstanding, and
obviously did not intend to mislead anyone in any manner. It's a
shame others who regularly do mislead others here with their ads
that attempt to "conceal" the fact that their items are for auction,
or for sale on eBay, refuse to cooperate and identify their items
clearly as being "FA" or "FA on eBay" in the message subject lines.
Doing so helps buyers and sellers (as well as those who simply are
not interested), in my opinion.

> Also, Bob started the namecalling by #1 implying the seller was
> a bait and switcher #2 implying he was greedy and #3 sticking his
> nose into someones legitimate ad like he is some kind of amateur price
> policeman.

No comment; I don't feel doing so would serve any useful purpose,
just as name-calling serves no useful purpose.

> And #4 complain to eBay? They make $$ advertising peoples items, do you
> honestly believe they will drop a paying customer for advertising his
> item on a newsgroup??

No, I sure don't, nor would I expect them to. They are a business, a
very large and extremely successful one that has grown very rapidly.
And altho it's my personal opinion that the Usenet newsgroups should
not allow businesses to advertise in the newsgroups, it's also the
case that the advertising seen in the newsgroups is not being placed
by eBay...it's being placed by individuals who are customers of eBay.
Whether it's "right" or "wrong", in accordance with the newsgroup FAQ's
and charter or not, I truly do not know.

> Get a life. If you don't like the ad, don't read it.

"Get a life"? "Don't read it"?
Yes sir, whatever you say, N3XBU.
I'll salute you if you like, N3XBU,
but only with my middle finger seems to be rising.

> For everyone who doesn't like eBay, there are two who do.
> Check the NYSE and knock off the eBay bashing. It's a new way to sell
> to a large group of potential buyers. PERIOD.

Didn't you just say something in your message (above) about
"sticking one's nose into someone else's business"..."like
some kind of policeman"...or something like that?

From your messages, it appears there's something that makes
your opinions here more "valid" than the next guy's opinions.
It also appears from your messages that you feel you were
appointed to tell others here what they should and should not do.
I don't think so, N3XBU.

You used the word "idiots" in your previous message, just as you
used the word "PERIOD" in your last message, as tho your
word is final, and anyone who doesn't agree with you or your way
of thinking is an "idiot". I don't think so. But that's life...
G'nite to you, tho.

"...TVI in '60's because no one had cable"

Well a lot of towns did. In 1959 I caught a band opening one night, and was on for several hours.

Next day in school, EVERYONE came up and told me about all the cities and states I worked.

Seems I got in the local TV Cable system and wiped out the entire town. "Red Face?", "Mea Culpa?, ...its kind 'o funny now, looking back, but it wasn't a bit funny then.

This is an off-subject post, but then what would you expect from a Communist Idiot?

Have a good week-end, folks.

Yes they are Red.

The politically correct way for one to post an item for auction, is to precede the Subject heading with "FA" (For Auction). This way, If you or others wish not to view them, simply set your message filters (in your browser) to filter out "FA".

I've found the yeasu batteries are twice as good as most of the aftermarket brands. Or at least here they have been. Usually , you will charge at 10% of the current capability of the battery for 15 hours.. Say a 1200, should be charged at 120 ma for 15 hours for full charge. So I'd think with a 60 ma charger on a 1200 battery, you will need to charge for 30 hours at that rate. It'll work, I charge 1000's and 1400's with a 60 ma charger. What I do to tell when charged is to put a voltmeter on the battery and when you peak voltage with little change after an hour, you are fully charged. Will vary, but on say a 12 volt car battery, it will usually be fully charged at 14.4 volts. When you unhook the charger it will drop back to 13.8 or so. It's bad for a battery to stay at full charge voltage for extended periods of time. You should always unhook when fully charged or else the battery gets hot. Another kinda unprecise way to tell if charged is just to pick up the charging battery in the hand at room temp. If it feels cold or even room temp, it still needs more charging. When you pick it up and it feels very slightly warm to the touch, you are pretty much charged up. A voltmeter is the best way to tell though. It will never lie, once you know what your full charge float voltage is. I use 7.2 volt cells. If I remember right they are full at about 8.4 v MK

> I purchase about 4 batteries a year for my Handheld.. "Smitty" N5WPV

I guess they are ok, but the last supposably "super heavy duty" battery I got from Mr. Nicad sure didn't last too long. It was a 1400 and it's already deader than a doornail. Funny part is, I have an original yeasu 1000 battery that is still going strong and it's much older than the Mr.nicad. Heck, it was old when I bought the mr.nicad 1400. I'd ask about the specific brand of the internal cells and go with the highest quality you can find. Might cost more, but it'll be worth it in the long run. I find the original yeasu batteries are the best. Don't know what brand cells they use, but they make most others look like junk over the long haul. I imagine mr.nicad can get the high quality cells as well as the other companies. BTW, my radio is a 470. Different case than the 530 I think. Mine uses the fnb series batteries. You can also buy just the inserts too. But taking the cases apart is not for the faint of heart. I use a hot hairdryer first and then a sharp razor blade to cut the glue seal. I still tend to mangle em a little before it's over with. The dead 1400 case , I converted to a regular battery case. MK

One of the rarest Swan rigs, the SS-200, Swan's first venture into all solidstate design, was sold only for a couple of years in the mid-1970's. This one, from my long-time personal collection, is an 8.5 cosmetically (very clean, front panel and knobs bright and shiny, no dents or dings) and 9+ electronically (hot receiver, adjustable 1 to 100 watts out, smooth VFO action). Has built in VOX, calib., and provision for external VFO; all controls on front panel, and includes a (very rare) copy of the complete manual. This is a piece of American ham history and a delight to use QRO or QRP.. $295 + shipping.
Tks! Jan N0JR

> Can someone tell me if ebay postings are within the charter of this
> group? Where can I get a copy of the charter?

This group was set up before ebay (ack!ptui!) became a major irritant
on Usenet. So ebay (ack!ptui!) is not mentioned in the charter.
This group was not set up to foster non-boatanchor commercial
interests such as ebay (ack!ptui!). So even while mention of ebay (ack!ptui!)
is IMHO off-charter, we cannot escape its occasional (read: every 15 seconds)
mention here.

Please preface any ebay (ack!ptui!) listings with FA in the message title,
and all will be well. or at least as good as it gets in a post- ebay
(ack!ptui!) world.

2835. Need TMC GPR-90 help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-19 00:00:00 UTC
From: paul@pachena.ca
Message-ID: <7ak43grpf1@nnrp1.dejanews.com>
Source record: 89269

Hello all,

I have just aquired from a friend, a TMC GPR-90 receiver. This looks like a beautifully built rig and I would like to put it in service. Everything seems to work fine on it other than the fact that it has a lot of distortion on strong signals (anything over S-4). I have searched the newsgroups and found many suggestions about looking at the AGC circuits. I have done all of the obvious things (I hope ;-)), changed all tubes, checked all pin voltages, scoped all of the key gain points in the circuit, checked and rechecked the AGC circuit. I discovered the only way I can get the distortion to disappear is to lift the diode detectors load resistor from ground and bias it slightly positive by connecting it to the positive supply through a 2M resistor. Through all of the reading and research I have done trying to solve this I have concluded that by doing this, I am shifting the signal on the detectors load line. It is a poor way to fix it and I would really like to determine the real problem and repair that instead. Perhaps the gain of the RF and IF stages is too high due to leaky cap or open R? If anyone is familiar with the GPR-90 (or receivers of this genre in general)and might have some more suggestions for this tired old brain, I would be very grateful. It's been 2 weeks now and I would really like to catch up on lost sleep. Please e-mail me for further details. I look forward to any and all help forthcoming.

Regards,

Paul

Greetings and thx for reading
I recently aquired one of these fine radios and would like to learn more about it. I currently have the Riders manual only for the generic SP-600.

The rig has provisions for external IFO and BFO as well as external crystal control so I'm suspecting that there was a common transmitter often matched with the rig... and many other general questions.

If you know about these rigs, even if you are SELLING information please drop me an e-mail

Thanks

Alan de KB8VCK

I've never heard of a matching transmitter. I always thought the external inputs were meant for diversity reception. You'd have a number of Super Pros, and one set of oscillators, so they'd all be on the exact same frequency. My memory tells me that the VFO and BFO signals are avaiable on those jacks until you throw the switch, so one Super Pro would be the master and the other(s) the slave.

A company also had a very stable external oscillator (it had the VFO and I think the BFO) that took advantage of the input jacks. It was more stable (I think it the oscillators in ovens) and better calibration.

******

I'm thinning out my QST collection and decided to seek out other collectors before I put them individually on e-Bay. The QST's I have for sale in the 30's are collector quality - EXCELLENT condition. They are priced as individual years excluding shipping charges. Be glad to ship any method you prefer. If you want more than one year, I'll discount to make it worthwhile for both of us:

1930 $34 EX
1931 $32 EX
1932 $30 EX
1933 $28 EX
1934 $26 EX
1935 $25 EX
1936 $23 EX
1936 $21 VG
1937 $22 EX
1937 $18 VG
1938 $21 EX
1939 $20 EX
1939 $18 VG
1941 $18 EX
1947 $13 G
1948 $10 F
1949 $12 G

I have many other full years sets up to 1997 and many loose issues. Would entertain trades for CQ/QST/HR.....

Thanks,

73 es gl bill n4alg

I have been reading this newsgroup for several years and ebay teasers have all but ruined the group for discussion. The charter states that the group is not for commercial posting of ads. Ebay users are abusing Usnet more and more posting these teaser to discussion only neswsgroups to try to intice potential bidders. It is people like you who blantenly ignore the charter of a newsgroup in the hopes of putting a little more profit in your pocket that are causing this abuse of Usenet. You contribute nothing to he topic of this group, you only reason for posting here is for your finiancial gain. Users of discussion newsgroups are getting fed up with this abuse and are beginning to complain. All ebay teasers posted to this newsgroup will be forwarded to ebay.

The receiver that became the HRO was designed to replace the AGS
superheterodyne, but--as is true of so many software products
today--was so overlong in getting off the drawing board and into
production that it ended up being tagged Helluva Rush Order in-house.

Paul: I own one of these. First, get yourself a heavy-duty solder gun or iron, & solder ALL the riveted connections under the chassis (ground lugs, tube socket grounds, etc). This will work wonders. Guaranteed that they have gone resistive. Second, change all paper caps. Good luck - an excellent receiver.

Gonsset G-66B receiver, G-67 transmitter, with matching power supplies for
12 VDC and 115VAC. Manuals included. Cosmetically excellent, S meter
on receiver sticks. You will need to make up the interconnect cables.
$249 for all plus shipping.
regards,
Chuck...K1KW

> > indicates that its not worth that much to anyone else either. A
Viking II
> > will sell for about $100.00 to $125.00.. but not $500.00!!!
> > 73 tim

Tim:

A Viking II sells for $175. - $275., depending on condition, a Viking I
sells
for $125. - $175. ... these price ranges all assume a complete, unhacked,
and at least partially operational rig.

A "collectors quality" model sells for even more. $500. would require
that
the rig be in the original never-opened box and have gold plating ... IMHO!

There is a problem with profiteering driving users out of the market for

some fun rigs, but I suppose that is part of living in a capitalist society
where "whatever the market will bear" is the moto.

Even so, considering the alternatives I feel blessed to be an American,
even with all of our obvious warts.

I agree that profiteering on old rigs is getting ridiculous. It's almost embarrasing to ask what you know you can get for some of this stuff, especially if you're selling it to fellow afficianados. About the best solution I've come up with is to trade with other guys - at least then we can chuckle when we're both trading radios we paid 50 $ for for radios we'd have to pay 500$ to buy outright now. Not always easy to find a good trade, but at least boards like this make it alot easier. IMHO

The BC-221 is a precision frequency meter and signal generator. The
BC-906 is an absorption wavemeter. The BC-906 covers a limited frequency
range ~145-235 MHz. The BC-221 covers ~195 kHz to over 30 MHz. I
normally pay between $15 and $20 (depending on condition) for a BC-906
because of its nice case and the velvet vernier tuning dial.

YES!!!

I love swaps cause everyone gets a bargain!

Wanted.
-Blonde Altec bookshelf speaker in unmolested good condition.
See if you have one in the attic.
http://www.atl.org/images/altec.jpg
-National FB-7 SW-3 Navigator 51J4 SX88

Have.
-Vibroples Champion in original(opened) box, sn 174276. HP selective
level meter/generator pair (good for sweeping HF radio filters,
IF, and RF stages), KWM2A RE, cosmetically pretty nice, not working,
too far down in 'tuit priority list for me to ever get to it.
Oki Cell phone test sets. Measure all aspects of analog cell phone
and can program OKIs. Appears to work as cell phone with fully
programmable NAM and ESN but I don't have a manual so not sure.
Turbine looking thingy, http://www.atl.org/images/turbine.jpg
photo in URL is a sample. The one I have to swap is sealed in
govenment shipping container and has been overhauled and has documents.
Application is listed as A6 (assume grumman A6 intruder???)

-bob
404-888-0389 but email is best.
I'm in Atlanta.

Hi everyone,

I have an R-390-A that has a bad cap. It is C-603 which is a large can filter cap. and it's fairly common for them to fail. Up until a few days ago I didn't know that there were two of thes plugin cans that would work. One about 4 inches tall and the other about 6 inches. The pinouts are the same and both work, till you try and put it in the case. Anyone got information on where and how I can get one of the shorties.

Thanks,

Bill, N5WO

David and Tim:

Two Viking II transmitters just sold on EBAY for $501 and $425 respectively. They may not be worth that to you but 14 people bid on the first one and almost the same number bid on the second one. Granted that there is a certain craziness about an auction and EBAY stinks but nonetheless there were some buyers out there that were willing to pay more than you indicated for that transmitter. Please don't take my post as a personal assault but the prices you state are what YOU think they are worth or what they are worth to you. Everyone has a different opinion on what something is worth. It appears that a Viking II really doesn't have to be gold plated to sell for $500.

The Azden has been spoken for. If I do not receive payment
by 2-25 then the
radio will be offered for sale again.

Thank you,
Randy.

Azden PCS 2000 for sale. Good spare parts unit. It has a PLL lock problem but is functional otherwise. It has not been hacked up or modified. It comes with the original mike and instruction manual. Asking $25.00 shipping included. JPEG available.

Randy KB8ASO Milan, IN.

For Sale at Cincinnati Hamfest next weekend:
Drake TR-3 HF transceiver, AC-3 power supply, and MS-3 speaker.
Transceiver has good finals. Has some receive and transmit on 80 through
20 meters, but is dead on 15 and 10. Front panels are in super shape,
but cabinets need repainted (no dents).
AC-3 works well. MS-3 has a NEW 5x7 full range speaker in it. Includes
original owners manual. $135 for all or trade for a Drake MN-4 tuner.
Also a Tokyo Hy-Power HC-150 antenna tuner with built-in SWR/Watt
meter.

See Mark W4UDX at Cincinnati hamfest. Thanks

Lots of folks live in rural areas, far from active amateur communities
where fleamarkets and meets may be held. eBay gives them a chance
to find and bid on items they may never see.
At least take some solace in the fact that gear going for these rates
is going to a good home, and will get good care. How many of you
complainers have trashed older gear figuring its useful days were
long over?

Personally, I am old enought to pay for my toys... If I want something
I will pay the going price **IF** the unit is worth it to me. From what I
have
seen, the prime used gear seldom appears at fleamarkets or ham auctions,
and when it does, it is usually sold as it is being unloaded in the parking
lot.

When I don't want to pay the growing rate, I usually find that with some
patience
and networking amongst my ham friends, I will find the item at a price I
wish to
pay. The game is the same in most related hobbies. When I first started
collecting
antique radios the Zenith "Walton" tombstone was going for 400 bucks--an
exorbitant
sum in most collectors opinion. The latest one offered on eBay commanded
nearly
5000 dollars.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.swap

I have a Swan 500 for sale. The rig is about a 7 1/2 on the 1-10 scale. The faceplate is clean with one scratch. Here's the status: The receiver is working on all bands and the VFO tunes nicely. The band switch must be a little dirty as the VFO will jump a bit as you start to change bands. The finals are dead so I can not attest to the transmit part except to say that in the tune position it does put a few watts out. I've cleaned it up it appears that it had been sitting for quite a while due to the dust accumulation in the rig. I'd normally keep it and restore it but have other projects going. Includes the power supply. I suppose I can post a photo if interested, but don't have one handy.

$195 and I'll pay the shipping from Rochester Hills, MI

2916. performance of E.H. Scott naval receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-21 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <7apn3i$58p$1@remarQ.com>
Source record: 89033

While visiting San Francisco last week, my son and I toured the U.S.S. Pampanito, a WWII submarine that's open to the public. Mounted on the wall of the galley was an E.H. Scott receiver with BC and two SW bands. I assume it was there to entertain the troops. The model number was something like RDO-20.

I found a few posts about E.H. Scott naval receivers in the archives of this newsgroup, indicating that these were SLR (super-low radiation) sets, designed to emit as little radiation as possible to prevent the enemy from zeroing in on them.

I'm curious about their performance compared to other shortwave sets of the era. Would these be considered high-performance receivers, or were they average-quality sets with extra shielding, etc., to minimize radiation?

Thanks!

Phil

2917. Old Heath SG-7 Signal Generator FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-21 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <y2_z2.436$mc.1143@monger.newsread.com>
Source record: 89034

For Sale:

Heath SG-7 RF Signal Generator. This one must be one of the earliest Heathkits made. It covers from about 150 kHz to about 150 MHz. Color is the very old heath color, with a sort of "olive drab" front panel, and a green case, but not the color of Heathkit green we normally see. This is not a repaint job, but just that Heath used a different color at that time. It resembles a Heath "Lunchbox" xcvr in styling, and even includes an aluminum colored handle on the top. The Signal Generator appears to work OK, and includes output cable. Cosmetically, it is in very good shape for the age. This is not to say it is perfect, but it seems to be well preserved. $ 30 plus shipping from Florida.

E-mail to W8EK@usa.net

Thanks.

Message-ID: <36D06D2E.A3E1FDA@awwwsome.com>
Source record: 89035

The Scott entertainment receivers (RBO, SLR, RCH, ect.) performed better than average but were not the best performers of the time. After all, they were intended for entertainment and not vital communication. E.H. Scott Radio Labs were forced to comprimize the performance of these receivers to meet the requirements of their contract. Initially, Scott wanted to build these receivers with more IF stages like their best known receivers of the pre-war era. IMHO, the National military equivilant of the HRO series, the Hammurlund SP-600, the Hallicrafters SX-28 and other vital communications receivers were better performers. The Scott receivers did have better audio than most, however.

From: "J. Lee Smith" <ckvnfm@mb.sympatico.ca>
Message-ID: <01be5dda$3c2a2040$fc36c8cd@ckvnfmmb.sympatico.ca.mb.sympatico.ca>
Source record: 89037

Hello Folks:

I have a Canadian RCA AR-88LF which is now surplus to my needs. Radio functions exceptionally well, no AC hum, clicks, buzzes, dirty switches, bad gouges, etc. Has the original steel case, and copy of the manual. Very small paint chips in the trim, panel in good to very good condition with no rub marks or scratches.

This is a VERY heavy radio, so shipping will be a consideration for you, as it weighs in at a hefty 90 lbs approximately. It is a real strain for me to move it around...just what you need for ensuring that your radio table never shifts!

Case will need a repaint to be beautiful due to paint abrasions but there are no dings, dents, or holes drilled in it.

Asking $250 US funds plus shipping. If you are located in MN, or ND, I would prefer in-person pickup...and I'll even put you up overnight at the QTH during the turnaround. QTH is about 10 miles west of Winnipeg, Manitoba, Canada. My phone number is (204) 864-2334.

I have .jpg files available, but they were taken with a polaroid camera, so they lack the kind of detail I would have liked to be able to present to you. If interested, I'll email them for your perusal.

73 to all!

Lee Smith

I have restored one of these Scott naval receivers which I still have. It has excellent BC band fidelity (translated: high bandwidth).
I would say it is about an average SW radio---certainly not in the class of the big classics like the SP-600, Etc. Mine did not have many tubes---I think it had onlya single RF stage instead of the two normally in the high performance radios (i. e. a 3-gang var. cap instead of 4-gang).

Does anyone know if the Ebay auction market prices are being calculated into any of the price guides ?

Anyone know the name of a good reliable price guide for boatanchors and antique radios ?

Thanks,

-ERIC

I typically like to sell directly, but I have so darned many tubes, I split them up into 3 lots and posted them on eBay (sorry).

Lot 1 is 187 assorted NOS /NIB 7-pin and 9-pin miniature tubes;
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=68069950

Lot 2 is 111 assorted used tubes (mostly miniatures). All tested, all boxed, includes some 6DJ8 Bugle Boys, a Telefunken 6DJ8, and lots more;
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=68076459

Lot 3 is 50 assorted NOS/NIB sweep and rectifier tubes.
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=68081160

I also have more individual tubes posted on my website at;
http://members.aol.com/reactor001

Thanks for checking,
Tom Mitchell

>
>Joe
>W5WBR

Pretty sure these things had two RF stages; one was more of a radiation
supressor than RF stage, though. The RF stages are enclosed in the coffin
at the center rear of the radio, with one tube being mounted horizontally
(if I remember right) through a bulkhead.

BTW the Super Pro 600 was not a WWII vet; you're thinking of the
BC779/BC1004 et. al. which were variants of the SP-200.

Not a stellar performer by any means, but better looking than most WWII vets
and has some cool engineering features.

FOR SALE: Hewlett Packard VHF signal generator. A classic! Looks great; lotsa knobs. Condition unknown; I haven't plugged it in, but the info I got with it was "It worked before I moved", whatever that means. $50 and it's yours. Or if I check it out at your request and it works, the price goes up to $75; if it doesn't, price stays the same. Located in Portland, OR. I am willing to ship, although it's probably not worth shipping very far due to weight vs. value ratio. SERIOUS INQUIRIES ONLY !!! Please respond to <mkepp@hevanet.com>.

There are to me two possibilities;
First- Viking II's are really worth $501.
we are too close to the sources of these
things to see the trend.
Second- All this bidding up is fake!

Also it seems that E-bay no longer allows posting of firearms on their
auction board.
Is it that even they do not trust their
own bidders to be legit.?

Source record: 89053
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

The 350D, Swan's first venture into digital display, dates from the late 1970's. It uses a single 6MJ6 (6LQ6) final and is of the hybrid (tube/transistor/IC) design characteristic of the period. This 350D is a solid 8.5 or better, complete, clean, with bright knobs and front panel, fully operational, smooth VFO, and including A.C. power cord, VX-4 VOX, Swan mic, and original manual. $345 + shipping.

Very nice Hallicrafters station for sale. The HT-32A is in excellent condition. All knobs and paint are original. It has been modified to include an internally installed antenna relay which is powered from a small power cube plugged into the accessory AC socket. An RCA connector provides the receiver antenna output. All cables are included to provide turnkey setup and operation. The SX-101 MK3 is in very good condition. I has a chipped main tuning knob and one small knob is chipped. Station includes a microphone wired up for the HT-32A and an original R-46 speaker with original speaker and grill cloth all in great condition. Price for the entire station is $550.00 and I would prefer not to split up if possible. Shipping is extra and will not be cheap from Atlanta, GA. I will work with interested parties to avoid shipping, if possible.

They do have access to the internet, and the "rec.radio" newsgroups, tho, and just might be able to find what they're seeking here, at a fair price.

> Personally, I am old enought to pay for my toys... If I want something

> in the parking lot.

I'd have to agree with you there, Peter. The "prime boatanchors" don't seem to turn up as often at hamfests and such as they once used to. The marketplace has changed, and certainly the newsgroups and eBay have been a major part of this change.

> When I don't want to pay the growing rate, I usually find that with
> some patience and networking amongst my ham friends, I will find the
> item at a price I wish to pay. The game is the same in most related
> hobbies.

"Patience" seems to be the key word in the "collecting" hobbies. With patience, you can usually find what you want, in the condition you want, and at a price that's considered "fair" by both seller and buyer. I find this to be true with ham "boatanchors", as well as with older, collectible U.S. coins.

> When I first started collecting antique radios the Zenith "Walton"
> tombstone was going for 400 bucks--an exorbitant sum in most collectors

$5000? Hmmm, any idea what an RCA 5-T "tombstone" might be worth today, in excellent to outstanding condition?

2965. FT/FS: Harvey Wells AR-10A HF Aircraft Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-21 00:00:00 UTC
From: sparkes@fast.net
Message-ID: <7ap37e$ct9$1@news1.fast.net>
Source record: 89103
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Have for sale or trade or if you kave information about:

Harvey Wells HF Aircraft Receiver AR-10-A (with dynamotor A-11) circa 1944 with:

1) 12 volt Dynamotor AA-11
2) Band Change Unit AA-12
3) Tuning Control Unit AA-13
4) Shock Mount AA-14
5) Electrical Control Unit AA-15
6) Crystal units AA-1
7) some interconnect cables and connectors (not all)

This receiver is powered by 12 volts. I do not know much about it (i.e. what airplane it was used in).
The black wrinkle paint on all units is in very good condition although there are some minor scratches.
Remeber this radio is over 50 years old. It is in clean condition internally and all auxilliary equipment is in
very good to excellent condition. The receiver has two tubes missing, the remainder are present but
untested. The missing tubes are a 6SK7 and 6SN7.

I also have the original Instruction Manual for this receiver, dated January 1944 (a little dog-eared but
complete) and a photocopy of it, so as not to degrade the original any further.

Am looking to trade for any of the following:
BC-348, BC-224, BC-314, BC-312, BC-342, BC-344, or clean unmodified ARC-5 equipment (such as
BC-453s or BC-454s) in unmodified, complete condition.

If interested or if you know where the receiver was used or other information, please contact:
Ned Parkes

Wow! And guys quibbled with me just a few months ago about $125.!
Collectors inflation I suppose ... driven by eBay greed.

The time is coming very soon that users of boatanchors on limited budgets
will be priced out of the market. Sad.

Hi,
I have two Collins S-line styled BUD INDUSTRIES boxes.
These are empty, and in new condition.

One is the same size as the 32S / 75S cabinet, including a white trim ring and
a flip top lid. Ready for your home brew antenna tuner, amp,
or ???. With white feet. Color scheme is dark grey front panel,
light grey box. Matches my S-line colors nearly perfectly.

The other is very small -- like the size of a DL-1 dummy
load, etc. Same color scheme. Would be ideal to mount your speech
processor, cw keyer, clock, or ??? to match your prized S-line.

Price is $150 for the pair, plus exact shipping (these are light).

thanks,
Joe K7JOE

No, not greed. Blame the market for a limited product
that is now in high demand. And don't blame "collectors" either.
I wish folks understood what a "collector" is! Collectors
are probably responsible for most of these rigs still being
in existence, and not butchered with "hammy" type modifications,
than anything else.

Many of us collectors are also "restorers", I have taken two
SX-42s back to original, and I am currently the same with two really
rough SX-28s. These are the 100 dollar eBay junkers that you guys
thumb your noses at. Given that it takes at least 40 to 60 hours to
properly redo
one of these sets (depending on condition), plus the price or replacement
dial scales, parts, knobs, etc., do you really expect to see them being
sold for
100 bucks like in the "old days"? My time is worth something, and besides
as a collector I do not "deal" or trade my sets on the open market. They
are
bought to give me or close friends enjoyment, not pocket money.

So, you see a restored SX-28 going for 400 bucks and whine about boatanchor
prices. Never mind some poor slob payed 150 bucks for the set, and probably
another 50 or 60 for shipping, and then spent countless hours finding the
parts,
money and time to make it look new.

Don't confuse collectors with those who purchase these rigs as investments--
something to be bought cheap and turned fast around for a substantial
profit.
A dealer justifies his inflated prices by claiming his "legwork" is worth
something--
and most likely could give a damn about the history or nostalgia behind his
wares.
A collector's set represents the work that went into making/keeping the set
in that condition, and a deep appreciation for the what the radio
represents.

There will always be boatanchors for those on a limited budget, provided
YOU are willing to do the legwork and spend the money to put something back
into original or at least working condition. With some exceptions, the days
of
finding pristine examples of higher-end gear for bargain prices are long
gone.
If you think you are going to find those bargains on eBay, you are mistaken.

2980. FS--HW-7 and Power supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-21 00:00:00 UTC
From: Nick Marsh <nickwb4sqi@wwd.net>
Message-ID: <36D02BF0.1826@wwd.net>
Source record: 89118
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have for trade a HEathkit HW-7 with matching power supply. THis radio has the following mods.

1. Audio CW filter
2. Accu-Keyer with speed control and jack for paddles.
3. New receiver front end.
4. RF gain control

This radio appears to work, seems to receive on three bands, RF output accoding to meter. I have no docs on the mods. Power supply puts hum into receiver (typical for HW7?)

I want to swap this radio for Heath SB accessories, need SB630 station console and SB620 analyzer, will also consider swapping to SB102/HP23.

Since I don't have the docs this radio is sold as is, guaranteed not to be DOA.

Hi Gang,
I've got an R-123M Russian tank radio, with power supply (BP-26),
and all cables (no mic or phones though) that I'd like to
sell or swap.

This rig is an FM tranceiver, part solid state (I've been told) that
covers 20 - 51.5 MHz continuously with 4 motor driven (!) presets.
I believe it is about 20 watts RF output. Receiver works great
haven't tried the transmitter because I do not have the correct
antenna connector. It runs off of 26 VDC.

It is in good cosmetic shape except for some scuff marks. Its also
heavy, but small. I'd either like to get $200, or swap for a
Hallicrafters SX-117 in good cosmetic shape, unmodified.

Steve

I have a KWS-1 and a Viking 500
transmitter which I purchased several
years ago and never got around to putting
them on the air. They are both in VG-
excellent condition and are both really
nice looking transmitters. The KWS-1 is
missing one connecting cable and relay
but has a beautiful manual, the rectifiers
are solid state replacements. I don't think
that I ever got the connecting cables for
the 500, but those are not hard to replace.
both have been un-used for about 6 years.
I would like to get as close to $2000. as I
can on the KWS-1 and $1000. on the
500. I will however acept the best reasonable offer.

Thanks,
LEN

2999. FORSALE - MINT Kenwood TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-22 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7arqsa$2fe@nntpa.cb.lucent.com>
Source record: 88987
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 + shipping. You might find one for a few $ less,
but NOT is this great condition.

I do not know if these a what you want, but I have 7 (seven)
hallicrafters knops.

4 small for 1/4 inch shaft
2 large (tuning ?) for 1/4 inch shaft
1 small for what looks like 1/8 inch shaft

One of the large ones is missing the shiny mettle center.

All are black with ridges. Looks like 1950's vintage.

Also have 4 small old hallicrafters knobs that look like
SX 28 vintage (1930's or 40's).

Chris

I have a Collins mechanical filter assembly. It says:

Collins Mechanical Filter
Plug in Adapter
Type No. 353a-15

522 9547 014

Has an F455F15 filter inside a rectanguler metal box
with a male octal plug on the bottom and 2 7pin sockets
on top marked 6au6 and 6ba6 respectfully. Looks like an
adaptor for an old rig. Maybe it replaced a 6sq7 or some
such. Of course I could be all wet on this, just a guess.

Would like to get $30.00 for it.

You might post the date of the QST article, since somebody was looking for
such an article last month, and while many have remmebered such an
article, nobody's come up with a specific date (except for me, but it was
a very radical modification of the rig).

John,

The NCX5 MkII was advertized in Sept 65 as an improved NCX5 . National
announced that their new balanced modulator circuit would be
incorporated into all new NCX5 production and was available as a
retrofit to existing NCX5 customers.

No cosmetic changes or labeling but just behind the VFO capacitor
housing V10 and C7 are replaced by a module that has V501.

Later on this evening I'll try to post the ad to my National Product
line web page at:

http://www.io.com/~nielw/nat_list/nat_list.htm

I'm looking for info on the Type 14 hf tx. The unit I'm dealing with was made by Northern Electric in Canada, probably during the '39 - '45 war. I don't think the design was Northern's - more likely Western Electric or RCA.
Equipment is in two cabinets about 7' high x 2' wide x 3' deep. One cabinet is the modulator and power supplies, the second the r.f., which has a rather complex 10-channel switching set-up controlled by a telephone dial on the front panel.
Any help, or leads to anyone who could help, will be very much appreciated.
Thanks and 73

> There are to me two possibilities;
> First- Viking II's are really worth $501.
> we are too close to the sources of these
> things to see the trend.
> Second- All this bidding up is fake!

To me, there's other possibilities, Len...including the possibility that particular Viking II was apparently worth $501 to the buyer. Nobody "twisted anybody's arm"; the $501 bidder is now the proud new owner of the Viking II that he/she wanted, having paid the price he/she voluntarily chose to pay.

We might (and some of us do) wonder "why?" ... but only the buyer who paid $501 knows why he/she paid that price. There are so many possible reasons "why?"...including..."no particular reason why".

Another Viking II may sell for less than half that price, while yet another may sell for considerably more. That's just the nature of today's marketplace...a multi-faceted, "dynamic" marketplace...as multi-faceted and dynamic as those who choose to participate in it.

> Also it seems that E-bay no longer allows posting of firearms on
> their auction board. Is it that even they do not trust their own
> bidders to be legit.?

More likely it's a matter of adherance to and concerns relating to firearms laws which restrict interstate sales of firearms. It may also be a matter of e-Bay choosing to avoid the possible "hassles", the probable legalities, and the potential liabilities which sales of firearms (through use of their facilities) may create for them.

3047. FT: EICO 753 Transceiver 3band am/ssb/cw

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-22 00:00:00 UTC
From: fiin@my-dejanews.com
Message-ID: <7aqo4g$708$1@nnrp1.dejanews.com>
Source record: 89069
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.shortwave

The set I have to trade is an EICO 753 transceiver;
It operates SSB/AM/CW on 80,40, and 20meter
AM output is 30watts, SSB is 120watts
(This is quoted from the manual& schematics which are with the unit)
unit is about 6x14x11 though there are diagrams showing how to mount it for mobile (or use it as a tabletop)

I read a little about this radio and have heard that they are known to drift, but I have a copy of a QST article which explains how to stabilize it.

I am not an amateur operator, and do not know a lot about transceivers, I don't have a power supply so I cannot attest to its operation. The unit interior looks clean and intact through the vent screens, but there are a few scratches on the front.

If you have any other questions about this radio let me know,
I would trade for almost any receiver, though I would prefer one with ssb ability. Old Radio Shack DX model or whatever you feel is of fair value for trade.

Apply any offers to: Xfiin@Xusa.net (remove both X's)
Thanks -Bill

Hi again Butch.
You didn't answer my last email fully.
I also asked you if you need the female or the male 9-pin connector. I don't remember which is mounted on the swan radios.
Mike.

3049. Eddystone 830 series receiver

I am restoring an Eddystone 830 series receiver specifically the
model 830/4.

Would anyone have available the tube compliment and corresponding
valve reference number, example V1 6ES8, V2 .....

Also would anyone know the crystal frequency and crystal type of the
2nd local oscillator.

If anyone has a schematic or copy available I would be very interested.

Please reply to csc@smartt.com

Colin

>forgotten. What was its origin, again?
>
Hello Martin,

According to an article in Electric Radio a while back, the HRO was developed in a very short time. Much of the work was specialized machining, and the machinists began writing "HOR" (Hell Of a Rush") on the parts and drawings. It became such an "in-joke" that the project became the "HOR" project. But the brass hats realized they couldn't market it with the name HOR, because of how it would be pronounced as a word, so they reversed the R and O.

I wasn't there, but I believe it!

From: tcltd@widomaker.com
Message-ID: <36D1783D.68F4@widomaker.com>
Source record: 89076

I have two of these - one in excellent working condition (the 2d doesn't work - yet); anyway, these sets have near high fidelity sound when played through a good and matched speaker. Try a local AM broadcast station that plays good music - AM sound at its best and probably far better than anything built since them. IMHO. Jim

A good reason why being in a local ham club and sharing good fellowship is so worthwhile. (I) seldom see more than a piddling showing of greed at our swap meets. Our club occasionally holds auctions at meetings. Lots of fun. I've picked up some big avoirdupois for 0-25 bucks during the local summer swap meet. I sometime return it the next year. Hams often "catch and release". Given enough time, a real "jewel" will make a full circle!!!

I suspect both points are correct to some degree. Certainly, HamFest
and local flea market prices are usually going to be somewhat lower than
eBay. However, that is because they have a limited (local and focused)
audience or market place. At the other end of the scale, eBay provides
a seller a global audience and gets to the buyers with extra cash who
may not have the time or inclination to rummage around in cardboard
boxes at swap meets. If you look at popular items with a lot of
bidders, you'll see a pattern of bids. A few low bids (well below
"perceived" market value), the majority at or around the recent going
rate at the Flea Market, and a couple up higher (sometimes 2-5 times
higher, or more).

Hello! Has anyone run these side-by-side? I'd be interested in hearing your comments regarding basic receiver performance in CW mode of the two.

I know the '830 is a load-n-dip radio, and the '751A isn't, so that isn't of concern to me. I'm most interested in basic receiver performance on CW; dynamic range, selectivity, and sensitivity comparisons.

Thanks!

Source record: 88942

In a way buying gear reminds me of what happened when people buy a house. They buy a house at a certain price and when they sell the house several years later they get more for it. Often they fail to take into account many factors.
Consider the cost of upkeep, the cost of loans etc. The cost of the home was not the original purchase price , but the sum of all those costs. The bank , local and state taxes actually sucked up your profit.

Now consider the cost of ham gear....
A ham goes to Dayton or other major hamfest and has certain static costs of attending the hamfest. If you are like the majority of attendees ; you are from out of town. You will have to get there (one cost) you will have to stay somewhere (added cost) , you will have to get inside the gates (ticket cost) and you will have to eat while your are there (granted you have to eat anyway, but usually you don't eat pizza for $3 a slice when using your computer).

The point that I am making is that your $100 *bargain* at the hamfest may not be such a bargain afterall. Think about it.

In article <7au7if$6bn$1@nnrp1.dejanews.com>, amfone@concentric.net
says...

> Hello I want to put the R5000 in the car for some mobile listening. But
> note I do not have the optional DC2 connector.. Behind the plastic cover on
> the rig I just have an empty space.. the manual says a technician should
> install the dc connection...Does anyone have a dc connection for the R5000
> they would like to sell and how hard is it to put in the rig ? I sure don't
> want to send the rig in, to a shop just to put in a simple cable ...

I really liked my R5000, a shame I had to sell it to finance a
better radio (i.e., a transmitting one!) I think that the bit about
sending the radio in for service is the normal manufacturer conservatism
regarding service. I installed the VHF adapter in mine, without
instructions. Nothing inside the radio is all that difficult to figure
out, so if you can find the DC module, give it a try.
BTW, I got my VHF module at Norham Radio. They don't have any
more of those, but they might have the DC module. Just run a web search
on the part number, and call every place that lists it.

(Sorry if this appears twice, I posted this over 24 hours ago and it never appeared)

For anyone interested, here's the website for the USS Pampanito

http://www.maritime.org/pamphome.shtml

and a page on its onboard electronics

http://www.maritime.org/radiocat.htm

including the RBO receiver

http://www.maritime.org/radio-rbo.htm

If anyone has a nice RBO for sale, let me know. I could earn *major* Dad points with my boys if I got a
real "submarine radio" like the one we saw on vacation.

Cheers.

Greetings:
I recently acquired a Gonset VFO (matches Communicator IV series) and need advice on connecting the unit to a 6M Comm. IV. The RF connector makes sense, it goes into one of the available crystal sockets however, there are 3 female RCA connectors (J1, J2, J3) that are undocumented. On my unit J1 is fitted with a jumper. Could anyone advise me on the correct patch scheme for the unit? Also, has anyone had any experience running narrow band FM with this? Thanks in advance for the help!

I wanted to get the word out to all the sites about a thief by the name of Glen Verasso of
Newark, Ohio. He entered into a trade agreement with me when he saw my listing of
my Henry 2KD5 in one of the various ham sites, amngh whch this was one. He offered
to trade me an FT1000 (presumably an early one) for my Henry. This seemed like an
odd, but certaily reasonable trade so I went for it. I carefully packed up the Henry in 3
boxes ans sent it to him UPS, the same time he sent a package to me, again UPS. What I received today was a nicely wrapped box with three concrete blocks inside, total value
about $1.50.

Guys....
This is an example of an old usenet game called "trolling."
A "troll" is a post on a usenet group specifically designed to
upset people and get them posting long threads denoucing the troller.
It's not the same as a "wisecrack" reply or post that's on-topic;
The troller doesn't actually care about what he's posting.
The subject is irrelevent to him.
He will post shocking or outlandish junk just to get heated replies.
He gets his "bang" out of upsetting you.

These "trollers" absolutely LOVE the ham related newsgroups,
because so many people will publicly reply to them.
The proper response is to either ignore him or reply to him
in private email. Please don't copy the newsgroup.

Kind Regards,
Dave AB5S

I have been informed (in a less than polite way) that I was too broad in my statement that I had listed my Henry 2KD5 in this or any other newsgroup and that I had been defrauded by somenon who was using the newsgroups. That was not my intention. My only intention was to warn all of you about this individual in case you might have the occasion to have dealings with him. I never expect to see a dime of my loss again so I had not hoped to gain in any way by my posting to the newsgroups.

So let me be perfectly clear -I DID NOT POST MY HENRY 2KD5 IN THIS OR ANY OTHER NEWSGROUP. I WAS NOT DEFRAUDED BY ANYONE THROUGH THESE NEWSGROUPS.

My ads were all at Internet trading sites and all of them have been informed of the situation, as well as this person's ISP and all law enforcement officials in the respective jurisdictions.

I have slit my wrist and let a small sampling of blood fall on my keyboard in pennance.

Regards,

Gary

In article <36D219D3.7016@falls.igs.net>, Anthony Wilson
<atony@falls.igs.net> writes
>I'm looking for info on the Type 14 hf tx. The unit I'm dealing with was
>made by Northern Electric in Canada, probably during the '39 - '45 war.
>I don't think the design was Northern's - more likely Western Electric
>or RCA.
>Equipment is in two cabinets about 7' high x 2' wide x 3' deep. One
>cabinet is the modulator and power supplies, the second the r.f., which
>has a rather complex 10-channel switching set-up controlled by a
>telephone dial on the front panel.
>Any help, or leads to anyone who could help, will be very much
>appreciated.

I used several of these when serving with the Colonial Service in Kenya
in the mid 60's.... Made by COLLINS, and very slow to autotune....!!
The Colored operators used to hear a call on one frequency, then
selected that one, while the *****! thing was tuning itself the caller
changed freq. to the next one in the book, whereas the op would then
select that one and it used to go on for hours like that!

We tried in vain to get the ops to stay on one freq. and let the caller
finally finding the one they were on but to no avail. I remember the
rebuilding of the autotune was a real pig..... But at this late stage I
cant remember any more details......

Happy Days, when Raddio had thingys that glowed in the dark!

Oh goodies,

I get to tell the Yank - or not? - about his own slang...

Enlightened one of the coarse tongue, the blessed boatanchor is a radio - though not amateur by it's nature. Envision an old, old piece of equipment. Huge, by todays standards. Indeed: tubes. And mostly steel casings. Heavy. Real heavy. Heavy enough to be used as...

Indeed: a boatanchor! Right in one go!

But, we don't throw them over the side. We collect and restore them. And sometime have to pay the fare, to get them over the big pond without sinking the ship.

Wammes - a Dutch collector - Witkop

A boatanchor is a large,usually steel contraption shaped kind of like a double fish hook, used when in a boat and not wanting to drift. One merely lifts (if a small one as in your brain) it from its' berth somewhere near the bow of the boat and, without much splash, drops it into the water using enough line as to reach the bottom of the body of water one is floating on. Now, in your case Mr. GNFrykman, be sure to unravel the line from around your right leg before letting loose of the boatanchor then don't forget to place the line around your neck. Okay now, heave ho off you go! Oh, by the way, don't forget to bring along a vintage ship to shore radio so that a passer by may call the Coast Guard to inform them of your fate.......Sure gonna miss that a__ ho__ !!

Hello, I have just gotten SIX of these , all un-used EIMACs.
Question...there seems to be some kind of white-grease type of substance
on these...is this for anti-corrosion purposes? Very nice "tubes", otherwise.
Just wondering....also, I will be offering these for sale at half price off
the "other guy's prices" Hope everyone is doing well, I have taken the last
couple months off from selling full-time to re-stock all my goodies, and
re-arrange
the collection to be able to serve you better. But, I'll be back!
If you have any tube inquiries in the meantime, just send them forth.
Thank you,
Joe Pratt, Tubecntral@aol.com

Very nice, 75A4, SN 29XX Has only the 4:1 reduction tuning and
the 3.1 kHz filter. No modifications or even any of the service bulletins
have been done. Original paint is so good it will not need a paint job.
There are only tiny chips from the corners. Comes with original manual and
a bag full of the "Orange Drop" capacitors for replacing all those leaky
paper jobs.
Price is $700.00 plus shipping. It is in the Atlanta area and I will work
with you on delivery.

Source record: 88865

The original NCX-5 used a 7360 beam deflection tube balanced modulator.
The Mark II model used a diode ring balanced modulator for even greater
carrier suppression.

Message-ID: <21600-36D3FA16-2@newsd-161.iap.bryant.webtv.net>
Source record: 88867

The ol' HG-10 is pretty stable VFO.

I'd first check your VR tube. Attach a digital VOM on to the output and see if your voltage changes when the VFO is keyed on. Should be about 150 VDC or thereabouts. Hit the SPOT switch and listen for the signal on the '16. Is it drifting? Now transmit (into a dummy of course!).. is it drifting?... sure sign of VR problems. Remember the VFO is getting power from the '16.. if you change the load (Key/Unkey) a bad VR tube could cause it to drift.

If not then it's Oscillator RF. To increase the Freq - either the Inductance has to decrease or the capacity has to decrease (or both).

Since coils don't unwind themselves... chances could be the capacitors are going bad... next you have to determine if it does it on 80 or 40 or both. (20-15-10-6-2 are harmonically related to 40) If both, consider that the bandswitch could be dirty... flip it around about and see if the freq changes...

I hope that has given you some ideas... I own a chirpy '16 myself... chirp comes from the unreg power supply... added an OA2 VR tube next to the 6GE6 final and attached it to the osc section only... now has a real T9 sig from xtals!

Good Luck! WD0HCO

One more thing - bring the VFO output near another SW receiver... or freq counter and make sure the -VFO- is drifting... the conversion OSC in the '16's receiver could be drifting and the VFO is ok... (rare but it could happen...)

RAM has to be replaced every 10...15 years. 751A has better front-end.
751A has better dynamic characteristics. And, yes, it has that battery :^)
I'll newer sell my 751A. If I buy (better?) hf rig I use 751A with transverter
to work VHF/UHF/SHF.

For Sale or Trade:

Galaxy V Mark II HF transceiver with optional 100 KHz calibrator
and VOX modules installed, and matching power supply. No manual.
Picked it up at an auction. All tubes good (I replaced three duds).
Checked for basic functionality. Receives on all bands. Calibrator
works. Loaded transmitter up to 200 W output on CW on 40m and 20m.
Sidetone and semi-breakin keying work fine. SSB not tested (I have
no mic to try it with). Rig is quite clean, definitely the best
I've ever seen. It needs only a light cleaning. Only mod that I
can spot is the mic jack (changed from 3/16" to 1/4" style), and no
repairs that I can spot. I would consider this to be a project rig,
since I haven't fully tested it and cannot guarantee it's 100% ready
to go. But... it shouldn't need much work, if any, to be usable.

Will sell for $125 plus shipping, or trade even-up for a Drake 2NT
novice transmitter, or trade plus cash for A Drake T-4XB and AC-4
(I have a nice R-4B that needs a mate!).

Well, since you asked so very nicely... "boatanchor" means on old radio transmitter or receiver, almost always using vacuum tubes. Some are so big and heavy they could be used to anchor a boat; hence the term. There is a large and active community of hams who like to restore, preserve and operate these classic rigs. Some favorites are Collins, Drake, Hallicrafters, Johnson and Hammarlund gear, and all sorts of military stuff.

Mike, N4PDY

3162. National RCP Information

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-24 00:00:00 UTC
From: tyree@mizar.isi.edu
Message-ID: <7b1l5i$bnq@mizar.isi.edu>
Source record: 88879

I need some help finding a schematic for a receiver I recently picked up at an auction. It is a modified National Company NC-100, with modifications to specifications for use in air traffic control. It has a label which states:

"Communications receiver made for Department of Commerce, Civil Aeronautics Administration. Type RCP. Serial No. 572. Made by National Company, Malden, Massachusetts. Modified by Schutting and Company, Washington D.C. Contract CCA-24653. Dated 10-30-45."

I have some documentation for a Type RCE receiver (also a modified NC-100), which is similar to the Type RCP. However, there are significant differences from the RCE. The tube line-up is the same except that the 6C5 2nd detector is replaced by a 6H6 and the 6C5 first audio is replaced by a 6F8G. It has an AGC activated relay that turns on a front panel pilot lamp whenever the signal exceeds a certain strength (probably the same level as the squelch or C.O.N.S.). It has the same frequency band ranges as the NC-100ASD.

I am sure that it is functionally the same as the RCE, but I need to know the exact schematic as modified to include the above tube line-up changes and to implement the AGC activated signal indicator.

Any help that can be provided will be appreciated.

Regards,
Vance Tyree

3164. R-390A Restoration

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-24 00:00:00 UTC
From: Bill Tobin <tobin@csrlink.net>
Message-ID: <7b1r58$e09$1@pigpen.csrlink.net>
Source record: 88881

If anyone out there has an old R-390A just waiting to be restored, I highly recommend Mr. Rick Mish of Miltronix in Toledo (419) 255-6220. He just remanufactured my Stewart Warner, and, from a cosmetic standpoint (I'm at work and can't play with it yet), this radio looks virtually new. Rick takes the ENTIRE radio apart, cleans it, restores the front panel, replaces any bad components (tubes, caps, xtals, etc.), supplies original meters, reassembles, aligns, etc., etc. Like I said, I haven't tried it out yet, but Rick claims that on most bands, my rig demonstrates 0.3 microvolts or better sensitivity on most bands. I have no reason to doubt him. "I love these radios more than I love people," he says.

Fully restored, these radios will outperform ANY modern-day, solid-state military HF rig by Harris, RACAL, or Watkins-Johnson, so it's in your best interest to get it done. The price is only going to keep going up, and parts are going to be harder and harder to come by. Rectifier tubes, IERC shields, ballast tubes, meters, etc. are in very limited supply now.

Anyway, my praises once again to Rick. He very obviously gives a damn.

Source record: 88883

Hello de Jim N1MAA....Was going through a pile of R-390A IF decks and one was fitted with Clevite ceramic filters in the 8,4, and 2 kc position. It has the Collins 16kc mechanical filter. The deck is an EAC ser # 24, and the filters seem to be original. I thought all R-390A's had the Collins mechanical filters. BTW I think it sounds really good. Better skirts than the R-390, but not as sharp and restrictive as the Collins mechanicals in the R-390A.
Any info will be a great help.
Tnx es 73 Jim

From: "D. Shane" <dshane@mail.ichange.net>
Message-ID: <36D4B6B7.A30092FF@mail.ichange.net>
Source record: 88899

Thanks for all the help I received with my low-output, unstable plate current problem. Turns out I had at least two problems - the expected dirty switch contacts, and alignment. Once I cleaned all the contacts and still had the same problem, I swapped out all the tubes (I really wanted a complete set of replacement tubes anyway) and still had the same problem. Then I borrowed an RF signal generator and did an alignment per the manual. Result - 120 to 170 watts out on all bands, with the original tubes. I learned something -- a radio can go out of alignment just sitting on the bench not being used.

Now the little beauty is back on the air-- all the little tubes are glowing happily and RFI is back in the TV.

All's right with the world . . .

---Don, K4DLs (k4dls@arrl.net)

Yet another example of how operating on 11 meters wrecks brain cells
worse than smoking crack cocaine.

The bidding opened at $250 and is already at $285.

All that for an IMD/RFI generator -- when you can buy 2 KW industrial
plasma generators on 13.56 MHz all day long for $200.

3197. FORSALE -Ken TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-25 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7b4ak8$ali@nntpb.cb.lucent.com>
Source record: 88792
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

I ordered one of these from the 59 or 60 catalog and THEY cancelled the order claiming out of stock or some such thing as that. I ordered a Knight Kit, can't remember which one, but a 3-4 band receiver I think, and it was canselled too! So,...I don't actually have one of those things, but it would be nice if it had been one of the first two that I ordered and never got. Sure was pretty in the picture, man!

Knight Spanmaster regen BC/SW receiver. How many have you seen?
In OK, not great condition---Fabric covering is loose on the RH side of
the cabinet and the the front RH corner of the fabric cover is ripped.
Panel and dials are fine, knobs are developing the white chalky stuff
on the surfaces [comes off with a toothbrush and scrubing].
All original and untouched, works but with filter induced hum.
$40 + ship for 10 pounds from VA 24012.
Also have a nice,clean working Heath GR-64 receiver--only prob is the
main tuning dial cord has broken. $35 + ship for 15 pounds.
Thanks for the read, Craig

3209. SP600 Help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-25 00:00:00 UTC
From: Terry Brown <browntl@concentric.net>
Message-ID: <36D5FDC4.BF6B8C05@concentric.net>
Source record: 88804

I'm recapping my JX17 (getting rid of the Black Beauties) and have
run into a snag. I've methodically recapped sections under the chassis
and tested the radio after each section. I started with the power
supply, went to the audio and then
the IF.
After recapping the 3.5Mhz oscillator, and the other caps nearby, I
tested the receiver. Worked great on bands 1, 2 and 3. Switched to
band 4 and nothing! Looked at the replaced caps and wiring around them
for shorts/solder bridges and found R37 (2.2k) broken in two. I thought

I'd accidentally broken it when reinstalling the oscillator shield since

it grounds on a lug under one of the screws. I replaced the resistor
and retested. Worked great again on 1, 2 and 3. Switched to band 4 and

R37 fried!
I can't see anything physically wrong. Anyone have any ideas what
may be causing it? Sure appreciate some help before I start pulling my
hair (thinning already).
Terry (KA5IHV)

Message-ID: <7b53o3$c7k$1@autumn.news.rcn.net>
Source record: 88806

The ac switching power supply in my Cushman CSM-50
service monitor has switched its last cycle.

Does anyone have a schematic of this section of the unit, or
any experience with the common failure modes for this supply?
Problem appears to be a lack of drive to the two switching transistors.
Have 160VDC on first set of filter caps-- rectified ac line voltage.
Switching transistors test ok, as does high frequency rectifier diodes.

Pete

Being obsessive-compulsive, I always arranged my crayons in rainbow sequence. When radio came along, all I had to do was add black and brown in front and forget the combos (red-orange, etc.). The quicker they learn to recognize the values by inspection, the better. I never think about the translation, just look and see 2200 ohms, or 4.7 Meg, or whatever. Throw a handful of values on the table and go.

I have a Hallicrafters knob, with aluminum skirt. It has six postitions
written on the skirt:
Crystal: Sharp, Med. , Broad
Normal: Sharp, Med, Broad
Knob does not have the cone shaped trip ring inside, but I have another knob
with the trim ring that will fit, if needed.
Looks like those on the SX-71, SX-99, SX-100, etc
Make reasonable offer.

You're kidding right? I thought everyone knew this. The "clean" version is:

Bad boys rush our young girls by victory garden walls.

Black,brown,red,orange,yellow,green,blue violet,grey,white.

I'll leave it to someone else to tell you the non-politically correct version. Come to think of it, in this day and age, who would know what a Victory Garden was anyway?

>
>brokebob@aol.com
I learned the color code my own way. Then 20 years later I heard the
"Bad boys"
acronym for the first time. My thought was that it went like a color
wheel of primary
colors. You learn black for zero which makes sense. Then learn that
brown is 1.
Then if you notice it's red and red & yellow make orange, yellow and
blue make green,
which leaves purple (or violet) dangling at the end. So you get red -
orange - yellow -
green - blue - violet. Now that gets you through 7 and you need two
more colors.
Now since black starts the sequence, is seems reasonable that white
should end it...
well it does. Now we need one more color, well it's gray (which is
what you get if
you mix black and white. Now for the tolerance, gold is more valuable
(expensive)
than silver. So gold is 'better' it's the 5%. Silver is the 10%. Now
in the solid-state
age, we need the 0.1 and 0.01 multipliers. Well, I never have figured
that one out.
Maybe it's gold is higher (1/10) and silver is lower (1/100).
If you're working on old radios, you must also remember BED.
(Body-End-Dot)
Now maybe this all sounds complicated, but it provided me an algorithm
for figuring the color code out...so I never had to 'memorize' it.

>looking for any advice on what would be best for the job - Deoxit or
>Progold. Also would it be better to use the 5% sprays or the 100%

5% DeOxit is more than sufficient to clean most contacts. 100% is for serious problems. Followed by a 5% rinse.

DeOxit is for general purpose cleaning. ProGold is for more exotic metals, like gold and silver contacts. I have both in my remote kit, and have found that DeOxit will take care of most all of my cleaning needs.

The best way to apply these products is to spray, or brush apply them...work the instrument, let sit for a while then spray or brush again to rinse the product, and the crap it removes from the contacts. Heavy crap requires a second or third procedure, but it will work.

3252. WTB: Drake T-4XB & AC-4

Steve -

Neither. Use Cramolin (of which Caig's Deoxit is a pale imitation):

http://www.JLIelectronics.com/cramolin.html

I prefer the 100% which I can dilute as needed for a particular
application.

Look for Microbrushes at hobby stores - they are great for applying
cleaning solutions in tight quarters.

I'm fixing up a Heath SB-301/400/600 station. Need one VFO dial
(can come from SB-100/101/102/110/300/301/303/310/313/400/401),
and two original power cords. Could also use a CW filter and an
AM filter, if I can get 'em cheaply enough.

73,
Dean / K5DH

Martin,

I have an original manual for this radio. (Mine got stolen - who on earth
would want to steal one god only knows!!)

I can't get to it just now 'cause I'm in the process of moving house but if
you EMAIL me your addr. I'll copy it for you an the next month or so.

Cheers,

Well I guess "good" is relative! My comparison was to other
communications receivers such as the R-390 series - the Scott certainly
sounds better to me when comparing receivers.

I have a COMPLETE SET of QST magazines from 1980 through 1994
(15 years, 180 issues!) that I need to sell. I'd love to
keep them but just don't have the room. They are in very
good condition. This is a fantastic resource for anyone who
is seriously interested in Amateur Radio.

I'm asking $100 for the entire set. You pick up in NJ or pay
shipping. If interestd, make an offer.

Thanks.

Hi ALL!

Does anyone have a small, SIMPLE circuit for a 455kHz BFO oscillator
using easy to find (ie: Radio-Shack type) parts?
I do have a small junkbox as well.

I've built a SW converter for my AM car radio and want to add SSB/CW.

Many thanks! ve9aa - Mike

From a firm called Mauritron in Southend-on-Sea, Essex. Cost about
ï¿½5-00.

They have a URL (can't remember it) but it cropped-up under 'electronic
valves' in Alta Vista. The last time I clicked on it, it didn't work.

I'd be real curious to see if any turn up. I was involved in a rag chew session ten or fifteen years ago about whatever happened to--all those drugstore tube checkers. For as many as there were, where'd they all go??? There is a rumor that they were all rented, and the owner(s) retrieved and destroyed them. Anyone know???

I have this cool weird old W.E. tube -- jus the thing to impress your friends, squish your enemies. It is quite DENSE, as is the current owner for dragging it home. Perhaps this can be rebuilt and used by someone somewhere? Or maybe YOU want it as the ultimate item for your tube collection! Check out the pictures in the URLs below: it has its own custom wooden shipping/storage crate, so it COULD be shipped. Contact me if interested, or if you know of any place that buys up stuff like this.

Thanks,
Rick Francis, rfrancis@glasscity.net

I have all (or most) of the insides from this gates 3 tower phaser available.
i can furnish pictures upon request of the coils, turns counters, ect. the mica
caps were already gone when i bought the phaser, so can't help you on them.
i honestly have no idea of value, some are single, 2 are double ganged.
at best i can furnish gates part numbers..for each coil...
if interested, email me or call 517-789-8702 up till 10pm est.
thanks for reading this post.

Kevin,

The NC300 sounds real interesting.

Which speaker?

Any problems cosmetically? Scratches? rust? Knobs?

Any modifications?

Do you have picture you can email me?

What's you phone number, I'll call so we can talk real time.

73, Niel-WA5VLZ Rochester, MN

Source record: 88695

Hello Group:

I am restoring a Philco 610 radio, and I was wondering where I could find a replacement speaker for it. Do I need a transformer as well? or can I just go to Radio Shack and purchase a 4 ohm PM speaker? Help!
If you folks could point me in the right direction, it would be greatly appreciated!

Thanks!

Clark

Hi, All!
I have two National NC-173 receivers for sale. Really
hate to get rid of these, but finances force sale.
First receiver is in very nice shape, works fine, with just a few
minor scratches. Has original speaker and mint owners manual.
Second receiver is complete but does not receive. Very minor
damage to lower front panel. Will fix up nicely.
Will sell all for $250 plus shipping. Will not seperate.

I heard last week from a guy in California who had a beautiful example of the species, and he told me he got it from someone who had leased them out to drugstores and other establishments and then warehoused them when they were no longer popular. If that's correct, your information was right.

As to where they all went, who knows?

Try the TenTec kit. Probably your best bet, as all
parts and pc board included in a simple kit for a
very fair price. BTW, many car radios do not use
455kHz for the IF. Make sure your's isn't 260kHz.

I guess I should check this NG more often. After using Cramolin for years
in my recording studios I found I couldn't find it anymore and was told it
was removed from the market. My service company uses D-5 De-Oxit by the case
with very good results. I checked the suggested web site and was pleasantly
supprized the R-5 cramolin is still available. Wonderful product!
I'll order a case Monday.
Tnx for the tip...
Oh, by the way, they both (R-5 and D-5) will work as you need.
Just don't use too much.

Some more recent car radios use 455KHz. Or 450KHz. Probably opening the case will give you information, because if it uses a ceramic filter (the ones I've seen could be described as a plastic square or rectangle, with the to five leads and orange or green) they are usually marked. If it's an older type, with just IF transformers, they sometimes are marked though it's less common. But if the car radio uses IF transformers, chances do seem good that it would be a 262KHz IF.

If it's a digitally tuned car radio, it's probably 450KHz. The synthesizer IC's seem designed for use with an IF of that frequency.

The original poster didn't say whether the converter is crystal controlled or tuneable. I guess it's more likely that it's crystal controlled, but if it's tuneable (you tune the converter and the radio stays on a fixed frequency), one could inject at the frequency that the radio is tuned to. It's sometimes easier to do it that way. Just make sure you can adjust the output of the BFO, so it gets into the receiver at the proper ratio to the incoming signal. YOu'd see this sort of arrangement in the old days when converters in front of car radios were common.

Another trick is to turn off the AGC in the radio for better operation. Of course this entails having a schematic of the set, or tracing out some of the circuitry.

Michael

Very nice working FRG-7. Panel about a 7-8, no damage; looks fine even
without cleanup. The cover and the bottom have a few rust spots; when I
got the RX a few years back I took it apart, cleaned it and cleaned the
controls. Excellent monitoring RX; if I don't sell it
I'll clean and repaint the cover and bottom and put a higher price on it

:)

$125.00 plus UPS from CT

I have a mild craving for an NCX-3 and related accessories. Comes from the fact that an old friend and mentor (elmer) when I was a kid had one in his car...I thought it was neat. He died last week, and for some reason I find myself craving an NCX-3. Go figure.

At least from what I hear they're cheap. But I'd like to find a nice one or maybe more than one. I promise to put it on the air and use it.

Thanks,

Travis

Good Condition Tektronix 60 MHz O'Scope. One book. *no probes* (using them on my newer TEK 2246). Has cover. Non-smoker. Wgt: 13 lbs. (Great Portable!)

Woul like to sell for $600 obo, or trade this wonderful Portable field instrument for a decent AM station consisting of Johnson Transmitter (Ranger II or Viking II-w/VFO), and good working condition receiver (No Junque, please). SP-600/National NC-300 Vintageis the level of qualityin a RX that I'm hoping for. (I sold my last one off for $75.00 ten years ago... now I could shoot myself over it!)

I would like to find a good home for this receiver. I purchased it about seven years ago as a replacement for my 1965 novice station. I have not had it powered up in over five years, and the power cord has been cut off because the original was too frayed to safely use. The receiver worked fine then, but just like my original, it was kind of deaf above 20 meters.

I'd like to entertain offers and reasons for wanting the reciever; price is not paramount, but finding a good home would be.

I don't know about that particular rig, but back in those days it was common to to have a stage that mutliplied to 25 MHz, and then another that doubled to 50MHz. So you could use 6 or 8MHz crystals as long as when mutliplied they landed in the six meter band.

Of course, there were exceptions, and there were the relatively uncommon rig that used 50MHz overtone crystals.

One important thing worth remembering is that a lot of those rigs were meant to use FT-243 crystals. Crystals in the 6 and 8Mhz range were common and cheap, and you didn't pick a crystal to go on a certain frequency, but you'd use a crystal that you could get and operate on that frequency.

But the frequency marked on those FT-243s often was not what you'd get. Between using them in an oscillator that they weren't originally cut for and crystals that weren't high precision in the first place, you could take a handful of surplus crystals marked with the same frequency, and there would be quite a frequency spread when they were popped in the transmitter. Not so good if you were expecting it to operate on a certain frequency, but kind of useful to get the ability to operate on numerous frequencies.

If you couldn't find a crystal that you needed, you'd find one that was fairly close, and grind it up to the desired frequency. FT-243 packages screwed together so it was easy to get access to the actual blank, unlike crystals in a metal can where the case is soldered together. You could find instructions in the magazines and books of the times on how to grind crystals. But you can't expect to grind the crystals all that much, so they have to be relatively close to the desired frequency.

Even without grinding, taking apart an old crystal can be useful (make sure you watch how it's put together), because the mere cleaning of it might get it closer to the marked frequency, and the cleaning might improve the crystal's activity.

Other schemes were to put the crystals in oscillators that had means of pulling the frequency a slight amount, commonly referred to as VXO's (variable crystal oscillators). You could only pull the oscillator a

slight bit, but the more it was multiplied the greater the variation on the signal frequency.

I'm not sure where all those old crystals went to. Either they've been thrown out or they still exist somewhere. I'm sure a lot of them were put on the shelf as people moved away from 6meter AM, or moved to synthesized rigs.

Hello. Looking for a users or service manual for a Alda 103a.
A photo copy or computer scan is OK.

Thanks,
Randy KB8ASO.

p.s. I have info on fixing the VFO backlash problem
on this set if interested.

<gary.sarra@snet.net> writes
>I recently acquired this receiver. It has an added control that my
>manual does not show. It is called RIS and is a potentiometer on the
>front panel. Also there is an input on the front panel called RIS input.
>Does anyone know what this control is for? Any info appreciated,
>Thanks, Gary
>
Radar Interference Suppression..... A feed from the Radar's Pulse
Generator was taken to the RIS input, and the control adjusted so a
noise limiter operated on every Radar Pulse..... Stops the Matelots
getting pulsed ears!

Gawd....takes me back a bit!

Is it doing this on all bands? If so, I would suspect something other than
the input matching networks. I used Cetrons in my last SB-200, and can't
say anything bad about 'em. I've also used Svetlana tubes in a few projects
and think very highly of them.

I have 3 or 4 mil surplus modulator units from APS-104 search radar (likely from B-52 bomber - 1950s/60s vintage). These were used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays,transformers and other parts all in airtight aluminum canister. Also have copy of service manual. Unused, still in original box, $65 (pick up only - exceeds UPS size limit) from southeast Alabama. 36330 zip. NOTE: Please REMOVE the "ns" AND REPLACE the "43" with "snow" to spell "snowhill" in my email or call 334-347-5281.

1. Swan Model 250 Operation and Maintenance Manual (Copy). Fair
condition but it
is all there. I think this has been hanging around the shack a long
time! $8.00

2. One set of National Radio Company stuff consisting of:

a. NC-140 and NC-190 Specification Sheet.

b. HRO-500 Specification Sheet (4 pages).

c. NC-77x and NC-121 Specification Sheet

d. NCX-3 Specification Sheet.

e. National Equipment and Accessories Amateur Net Price List RAP-10,
effective April 10, 1964.

f. National 's Anniversary Photo Album, circa April 1964, including
photos of
items produced between 1923 and 1964.

g. Sam's Photofact Service Data for HRO-50.

h. Sam's Photofact Service Data for HRO-7R, HRO-7T.

$12.00 for the lot.

3. Mosley Model TA-33 Jr. Assembly Instructions and Parts List. $5.00

4. Electron Tube Test Set TV-7/U Operation and Maintenance Manual
(Copy). This
does not contain the tube settings data. This is the operation and
maintenance manual
only. $10.00

5. Radio Set SCR-274-N Handbook, Maintenance Instructions, TO
12R2-3SCR274-
2, Revised 25 July 1956. 206 pages. $25.00

6. Radio Set SCR-274-N Handbook, Operating Instructions, TO
12R2-3SCR274-1,
Revised 25 July 1956. 28 pages. $15.00

7. Radio Set AN/PRC-47 Marine Corps Stocklist. 10 pages. $5.00

8. Radio Set AN/ARR-15 Handbook of Bench Test and Alignment Procedure.
(Copy). Approx 30 pages. $12.00

9. Radio Sets AN/ARR-15 and AN/ARR-15A Handbook Maintenance
Instructions,
AN 16-30ARR15-3, 15 June 1948. (Copy). Approximately 150 pages. $20.00

10. Frequency Meter, AN/USM-159, Operator's Manual, TM 11-6625-486-10,
April
1962, (Copy), 27 pages. $10.00

11. Heathkit Model SB-220 Linear Amplifier Assembly Manual, very good
condition.
$25.00

12. Heathkit Model SB-100 SSB Transceiver Assembly Manual, fair
condition (cover
is frayed and loose) but it is all there and not written on. $15.00

13. Heathkit Model IM-105 Volt-Ohm-Milliammeter Assembly Manual, Very
good
condition. $10.00

14. Heathkit Model HX-10 Marauder SSB Transmitter schematic,
specifications, and
operating instructions (copy), 7 pages, fair condition (yellowed
paper). $ 5.00

15. Heathkit Model HW-101 SSB Transceiver Assembly Manual (Copy by
W7FG),
excellent condition. $20.00

16. Heathkit Model HW-32A 20 Meter SSB Transceiver Condensed Manual (no
assembly instructions), copy by Heathkit! $10.00

17. Heathkit Model HW-22A 40 Meter SSB Transceiver Assembly Manual, good

condition. $15.00

18. Heathkit Model HP-23A AC Power Supply Assembly Manual (Copy by W7FG)

$12.00

19. Heathkit Model GC-1A Mohican Communications Receiver Assembly
Manual,
fair condition. $12.00

20. Heathkit Model DX-35 Amateur Transmitter Assembly Manual, fair
condition.
$15.00

3392. Input tuning of the SB-200

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-28 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19990227221321.25639.00001066@ng19.aol.com>
Source record: 88635

My SB-200 has developed higher input swr, such that my solid-state, auto-tune rigs have had a hard time matching it. Today I worked on retuning the inputs, as described for the 30L-1. I placed an swr meter between the amp. and exciter, a dummy load on the output of the amp, and applied about 20 watts of drive from a TS-940SAT. What I found was that the inputs do not exhibit a constant impediance over time. That is to say, as I keyed the amp for 10-15 seconds to adjust the input coils, the input swr climbed regardless of any input tuning I was doing on the band coil of the input.

These are the original tubes in this amp, in light use since I built it in the mid-70's. Is the condition I have described indicative of failing 572's? If so, what comments might readers have on the Svetlana 572's vs the Cetrons? And finally, is there an distinct advantage to installing these tubes as matched pairs?

Thanks,
K&#65533;MB

3395. Re: WTS(wap) nice HQ170AQ for Nice Pro 310. Can throw in some boot!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-28 00:00:00 UTC
From: BOB DUCKWORTH <bob@ns.atl.org>
Message-ID: <36D90BC9.6D46@ns.atl.org>
Source record: 88638

I didn't catch your name and would like a little clarification.

1) Do you have a Pro 310 to swap?

2) Is that a mint Pro 310 for 6 or 7 average HQ170 or
is that a ratty inop Pro 310 for 6 or 7 HQ170AQ with DX60/HG10
novice stations that are in nice shape or somewhere in between???

3) Is that $1000 to buy one right this minute or
what I might expect to find one for if I am patient enough
to scour boneyards for the next 6 years?

What I have to swap is a complete novice station in good shape.
HQ170AQ, DX60, HG10, Heath SWR bridge, TR relay, Johnson Matchbox,
fistful of xtals, and straight key.

I also have a KWM2A RE with rejection tune that I would consider
swapping for one.

Or, I might part with my near mint, Drake TR4CW with NB4, MS4 PS,
original manual, and Shure 444 Mic.

IMHO, the 310 is no great shakes performance wise but is a
very attractive radio. Linda agrees and a Pro 310 will be
allowed in the living room!!!

-bob

> Thanks, Gary

Hi Gary,
On some CR100's an extra pot was added to greatly reduce gain
of receiver when associated TX was on. (It was called sidetone)
Enabled operator to monitor his own TX. Pot was adjusted to give
comfortable signal for monitoring.....My CR100 seems to have
a muting relay built in as well.(When TX was on relay muted RX).
My manual says this facility is on CR100/2 models.
This maybe what you have, but don't know what RIS stands for.
Regards.
Albert (England)

I need a Circular dial, part number 100-M449, for a SB-101. I would consider buying a junker chassis if priced resonable.

3412. Drake 2B rides again! Passband Tuning question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-28 00:00:00 UTC
From: Marc Hildebrant <hildebrantfamily@worldnet.att.net>
Message-ID: <7bbsec$r0s@bgtnsc02.worldnet.att.net>
Source record: 88655

Hello Group,
I recently fixed up a Drake 2-B. It needed a new preselector variable cap and a good tune up. The variable cap was a real bear to replace, but, I did it.
The radio performs well. Sounds good and all controls work fine. One question remeans on the pass-band tuning.
I bought a copy of the 2-B manual, but the section on how to set the pass-band tuning is not clear to me. When I removed the front panel during the clean up phase, I could not return to the same knob setting for the pass-band tuning, since the shaft is smooth, not indexed. I think the tuning is O.K., but I'm not 100 % sure. Anyone have any ideas?
The tuning shaft rotates all the way around, but there is a slight "detent" at one location.

73,
Marc

I have a Collins kws-1 transmitter which I
posted here last week. Although I've had
several calls on it I haven't had anyone come to see it yet. It is in
cca condition excellent, it is all original the power supply has solid
state replacements. I am missing one cable and the relay, however
I do have the manual and there is little or no wear the knobs and the
face is perfect.
only a few tiny paint chips on the top front
edge, it is a very clean rig. Serial number is 8xx. I would like to get
$2000.
however I will accept the best reasonable
offer for it.
I purchased it about 6 years ago and never put it on the air, I've had
it covered
in a nice warm corner in a blanket for all those years. It did work fine
when I purchased it from a ham who hd it on the air and I worked him
with it and saw it
operation and it worked great. LEN

From: "Bruce J. Howes KG2IC" <bhowes@buffnet.net>
Message-ID: <36dadbf1.0@news3.buffnet.net>
Source record: 88536

Overload protect relay opens when unkeying TX.

Hope that perhaps someone can save me some time with a T-368E transmitter that I am working with. I have not yet pulled out the manual and starting troubleshooting, but thought someone else might have run across this before.

The unit works fine, puts out plenty of RF and such, until I unkey it. The plate current meter then jumps 30-50 ma, and the overload protect relay trips. If I reset this relay, then key the unit again, same thing happens.

I suspect that some soft of timing problem is at fault, that the HV is not being removed before the antenna relay drops, or some residual energy still exists in the tank circuit.

Anyone familiar with this? Thanks!

Did you replace C-103, located in the 3.5mhz osc circuit?
It is a .022 cap. Also take a look at C102, located on the
switch that is mounted to the the back of the turrent box,
on the bottom, near the back panel of the radio.

Holy Boatanchors, Batman!!

I used to have one of these that were released
by a Milwaukee TV station. I did get it
working! I tried selling but ended up parting
it out and throwing most of it out. Have you listed it
rec.radio.broadcasting?

My Gawd...where did you find this thing?

Would I want another one? Don't tempt me!

Pat

PS-- I had my TK-11 in 1977 (back before boatanchors
were "cool").

Most folks just don't know how to properly package an item to
survive the rigors of UPS. I have shipped hundreds of electronic
related items and have just had one lost shipment. None lost to
damage. I have bought items from individuals that assured me they
would pack it well and when it arrived it was trashed! Used properly,
UPS is the cheapest and most reliable shipping source we have.
However, Fedex is better than UPS if cost is of no concern. Thanks
for letting me get my 2 cents in! ...Joe

Marc, on my 2B the detent is just below the dot at the number 1.

Have you the section on setting up the passband tuning on page 24 of the manual?
I've not done this myself so can't offer any wisdom.

Marc Hildebrant wrote:

Hi, All!
I have two National NC-173 receivers for sale. Really
hate to get rid of these, but finances force sale.
First receiver is in very nice shape, works fine, with just a few
minor scratches. Has original speaker and mint owners manual.
Second receiver is complete but does not receive. Very minor
damage to lower front panel. Will fix up nicely.
Will sell all for $250 plus shipping. Will not seperate.

Dewayne "Duck" Moore

Does anyone have a SX-28 that they are parting out?
If so I would like to purchase some parts.
Thanks.
Mike, K6STU.

3477. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7bdbsm$ku2@news.Hawaii.Edu>
Source record: 88616
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

I am looking for a mate for the speaker shown in photo.

http://www.atl.org/images/altec.jpg

Goal is to move up from HiFi to Stereo.

It's a small approx 10x12x24 bookshelf speaker.

Must have original drivers in good condition. Not overly
concerned about cabinet as it's for listening too more than
looking at. So, if slats are missing from the little jailhouse
window or it has coffee stains or seed burns, that's OK.

-bob

3495. Looking for neutralization info, Johnson Viking Kilowatt

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-02 00:00:00 UTC
From: jimru146@aol.com
Message-ID: <19990302074229.12158.00002286@ng-fq1.aol.com>
Source record: 88484

Hello de Jim N1MAA...Was wondering if anyone was familar with neutralization of the Johnson Viking Kilowatt. I just want to be shure I have done it right. The manual is not very clear and was wondering if there was a procedure other than described in the manual.
My main question pertains to grid current either side of resonance. "At proper neutralization, the grid current should fall off on both sides of resonance although a steady or slight rising current on the low frequency side is satisfactory."
1.Question 1, Which method should I use, I went for falling off on both sides of resonance.
2.Question 2, What is the defination of "either side of resonance". I take this to mean varying plate tuning from resonance. I have been told it means varying frequency.
3. Question 3, what is "low frequency side", does it mean low side of plate tuning or actually lowering the frequency of the exciter.
Any info will be a great help. JIMRU146@AOL.COM
Thanks a bunch es 73 Jim

Sigh. I had hopes when I saw the Subject: line...

Listen. I have nothing against ebay, but most people who have
a sense of

courtesy will at least put the string "EBAY:" or "FA:" in the Subject:
line.

That way, aolers such as myself can skip reading the message and go
on others.

Also, those who have the ability to set up a killfile can PLONK you
if they so

desire. And it works out for you, too. Only those interested
in reading your

post, will.

Regards.

From: ed_engelken@my-dejanews.com

Subject: SP600 Help!

Terry:

According to my diagram for the SP-600JX17, R37 does not go to ground.
It is

the plate decoupling resistor for the 3.5 MHz oscillator tube (6C4)
and both

ends of it are at B+ when you are on bands 4, 5, and 6. Recheck
the

connections to R37 and C103. If either end of R37 shows a short
to the

chassis, something is wrong. Check S13 and S4 for possible shorts,
and make

sure C103 in not shorted.

Best Regards,

Ed

I agree with this. Packed properly, all shipments to me have arrived intact. I have, however received heavy items in old grocery store boxes, haphazardly stuffed with loose newspapers.

The damage was clearly caused by inept packaging.

Twice, I have asked for the sender to properly package something, you know buy a shipping carton, use foam peanuts, etc., even offering to pay all the costs. The shipper is hesitant, whining about the time to get the PROPER materials, time to use the proper materials, what a waste of money it is, etc.

I always end up telling him to FORGET IT!

I need a back cover for a D-104 microphone head (not the Silver Eagle) -
the one I have shows some pitting in the chrome finish, so I would like
to replace it with one that is excellent - perfect.

Does anyone have a "parts" D-104 with a good back?

Thanks,

Al - K8EUR

3513. Packing Costs and "Cheapness"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-02 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36DC4CE8.FFB09D09@ix.netcom.com>
Source record: 88502

Well, I sell and ship a lot of stuff and I'm here to
tell you-- new packing supplies are getting very expensive.
Have you bought packing peanuts lately???
The blasted things are $16 for a lousy 12 square feet!
It will take at LEAST two to three square feet of them
to ship the average boatanchor.

Let me give you some idea.
Let's say a person wants to buy a Heathkit rig for, say $125.
He says he wants it double-boxed with foam corners and peanuts.
Here's the actual costs to do that:

New large outer box: $3.49
Smaller inner box: $2.95
about 3 square feet peanuts: $2.50
Four foam corners: $ .99
Quarter of a roll of tape $ .75

Total packing costs $10.68
Postage Costs $17.00

Total shipping costs: $27.68

Then you tell they guy the shipping is going to cost
$27.68, right? Next thing you know, you're getting a
nasty email-- "How dare you charge me so much for shipping!!
I checked the web and it's only $15!!!" Then he either
cancels the deal or sullenly completes it. Either way,
he starts whining to his friends about sellers ripping
him off on shipping.

(puff! Puff! Whew...)
Thanks for letting me get that off my chest.

Guys--- it costs money to package things.
If I can get free boxes that are in good shape, I'll
do it and pass the savings along... but it ain't cheap, folks.

Kind Regards,
Dave Stinson

Thanks, Plum. Appreciate your comments, and happy it brought back good memories for you too. It really had nothing to do with eBay as I have no interest in the SALE of any of those items. (I'm bidding, but they are probably too pricey for me, and this post will only raise the price. I maybe should have left the links out as some invariably took it wrong, but they seemed quite relevant.

The only Heathkit I built that didn't work the first time was the fairly complex and tightly wired first SSB mobile transmitter (HX-20 ???). Turns out I had touched and burned into a small electrolytic audio coupling capacitor, and the damage was hidden from view. Took lots of troubleshooting, logic and hunting to find it. But then it worked so well, with a Hammurland HQ-110C for receiving. Great sport!

73 Dave W6OVP

P.S. I hate to see those high prices and the frenzy on eBay, but it sure is cleaning out the basements and garages!

Absolutely, the problem is packing. Look at some heavy equipment shipped by Hewlett-Packard or Tektronix. They use foam corner supports, triple cardboard boxes where necessary, front panel protectors,etc. I get the impression that most people (hams particularly) have NEVER seen anything heavy and delicate packed properly for shipping. Remember that the typical boat anchor is a lot denser and heavier than anything manufactured today, and packing for smaller and/or lighter stuff is entirely different. nevermind the newspaper stuffing atrocities. Most packing efforts I have seen are appropriate for anvils, and not much else.

Great story, Dave. Bet there are lots of other "stories" reading this and wondering whether to tell. We hope so.

Here's another Heathkit Memory:

It is the summer of 1953. After a year in college and exposure to other electronics types, mostly "hi-fi" and "stereo" freaks, I had to try and build something from a kit. Decided on a Heathkit VTVM, because, well, you have to be able to measure things, don't you?

It was a hard-earned $24.95 (??? Help me, I don't have the old catalogs here) that went to Benton Harbor, but it was my summer fun project after sweating hard on Iowa farms at $5/day to make next years tuition. The VTVM was such fun to build, those cool evenings in the damp basement, using the big new 250 watt 2-speed Weller soldering gun (another $10 or so) and the big soldering iron. (Still have 'em).

Dad thought I was nuts. He asked dumb questions like "what are you going to measure"? Well, um, how about the voltage at the wall outlet? It got a lot of measuring that summer. "Do you really need one of those?" Of course I needed one of those. "Well, then, why don't you use this acid core solder? We have lots of it."

I built lots of Popular Mechanics electronics projects in the late '40s and early '50s, but never met a ham. The local TV mechanic gouged this 12 year old $3.50 for a 20/20/150v electrolytic capacitor when that was a full days laborers pay, and he could easily have clipped one out of an old TV set and given it away. I finally met hams in college, and that Heathkit VTVM became the first piece of test gear at WN0ZSR. I still have it, and it works just fine.

Dad later became the very active W0LTB/W0KD, and built his own Heathkits. (1899-1986. RIP). So did a Son who built Heathkits, and a Daughter, and that VTVM played an important role.

-Dave W6OVP

Source record: 88521

My one and only Heathkit that I built was an HW 8 qrp rig. I built and wired and soldered it for 12 hours straight. Eveything tested fine. When I turned it on again the next day....NOTHING. SO I banged the top of it with my fist and voila, worked fine for years and years after that.

Message-ID: <7bifmm$rr8@edrn.newsguy.com>
Source record: 88522

Dow-Key electronic TR switch. It has its own power supply and is very compact. Uses a single 50EH5 tube. Three SO239 inputs - antenna, receiver and transmitter. RF sampling instantly switches receiver input to high impedance. Can be used with boat anchors to support full QSK CW. Priced at $35 including shipping CONUS. Email if you're interested. Thanks.

Terry:

According to my diagram for the SP-600JX17, R37 does not go to ground. It is the plate decoupling resistor for the 3.5 MHz oscillator tube (6C4) and both ends of it are at B+ when you are on bands 4, 5, and 6. Recheck the connections to R37 and C103. If either end of R37 shows a short to the chassis, something is wrong. Check S13 and S4 for possible shorts, and make sure C103 in not shorted.

Best Regards,

Ed

Sigh. I had hopes when I saw the Subject: line...

Listen. I have nothing against ebay, but most people who have a sense of courtesy will at least put the string "EBAY:" or "FA:" in the Subject: line. That way, aolers such as myself can skip reading the message and go on others. Also, those who have the ability to set up a killfile can PLONK you if they so desire. And it works out for you, too. Only those interested in reading your post, will.

Regards.

>
>73,
>Marc
>
>
Marc: I think you're almost done. Just avoid the urge to adjust the
internal controls on the passband filter. No need to do that and you
could really mess it up.

Here's one way to get the passband knob in the proper position.
Realize that the scheme for determining which sideband you are
listening too on the 2-B is a bit wierd. Notice on the glass that is
says, for example, on the upper four bands "SB1 is Upper." This
doesn't mean that the arrow on the passband control should be ON 1 to
listen to USB. No in fact it should be near 2. It all has to do with
the way you read the little diagram around the passband knob. Study
it a bit and you'sll see what I mean.

I suggest you do this. Calibrator on. BFO On. Passband in the 2.1
position. 80 meters. Tune for the calibrator signal. Tune for
"zero beat" (that point "between" the two sidebands where you hear no
tone).

Now you have to experiment a little. Find the point on the passband
knob where, when you tune up in frequency, you notice a big increase
in S meter reading (much bigger than when you tune down in freq). At
that point you have the passband over the upper sideband. Put the
knob pointer near the three dots near the number 2.

When you repeat this procedure with the knob pointer near the number one, you should notice that the you get the stronger signal when tuning down from the zero beat: here you have the passband over the lower sideband.

Hope this helps. Hope I haven't gotten it backwards! (Its early) Hang in there. The 2-B is a great receiver.

For Sale:
(Add shipping costs to all prices unless stated)

E.F. Johnson Viking Valiant transmitter, complete with original and repro manuals. 275 Watts CW
and 200 Watts plate modulated AM from 160 - 10m. Fully functional on all bands.
It was recently re-capped. All electrolytics and paper caps are brand new from AES. Speech
amplifier has only one simple mod to improve audio (by-passed the clipper) - sounds great
on the air, and many good 50 plus 20 dB reports! Hate to part with this beauty but cash need
forces sale. Will sell for $375.00 - local pick-up only in Central Florida. No shipping.

MFJ-564 Precision Iambic Key Paddle in excellent condition. Chrome finish with clear red paddles. $45.00

Kenwood TS-700A all-mode 2m transceiver. Built-in 120V AC and 12V DC power supplies.
Runs 20 Watts p.e.p. Built-in deviation meter, and many other desirable features.
Tunable driver and final. With original manual and microphone. Excellent condition.
looks and works like new. $275.00

Heath DX-60 with HG-10B with manuals - excellent shape. 90 Watts CW and 60 Watts AM
on 80, 40, 30, 15 and 10m. A few nicks on top cover of DX 60. Front panel is very good.
VFO looks like new. With all cables etc. Will sell for $195.00

EICO 753 transceiver for 80, 40 and 20m SSB, AM, CW. Excellent appearance. Includes EICO 752 AC
power supply for 120 V AC operation, all opriginal manuals etc. Needs two 7199 tubes available
for $9.00 each and a small replacement speaker for the power supply to get it on the air.
$150.00

Yaesu FT-840 HF transceiver. Includes original manual and microphone, DC cable etc. VLF
through 30 MHz with 100 Memories. SSB, AM, CW, RTTY etc. 100 Watts output. Has two additional

filters worth $120 each, for wide AM and narrow CW. The 6kHz AM filter is essential for
listening to Shortwave broadcasts, hams on AM etc. All band tranmsmit enabled.
In mint condition, very low mileage (!) This is one excellent radio for the money.
I love it but apartment life forces sale. Will sell for $600.00

Stancor ST-202A transmitter - a classic rig for 10m AM mobile operation. Original case and
in very good condition. Includes repro manual and appears to be a very, rare item
normally only seen in the old magazines and handbooks. Will sell for $50.00

Tube tester I-177B in excellent shape. Case was painted red and needs to be re-done, but front panel and interior in good operating shape. With manual.
Will sell for $70.00

3571. WTB: Modulator Deck for T-368 and other parts

If per chance if you have a modulator deck for a T-368 transmitter, or parts there from (such as mod xformer, relays, etc.) I would like to hear frm you.

I have nice unit that was modified for MARS use by removal of the mod deck components.

The unit that I am restoring in a early non-lettered unit, but I can still use the deck from a C-F model if available.

Also interested in any other T-368 parts that you might have.

Thank you.

From Jack (not Jeanette)

I buy and sell on the 'net and then recycle the boxes and peanuts. I'm not too proud to have even used Priority Mail boxes twice! Unfortunately I have a garage full of boxes, bubble wrap and peanuts.

You should have bought Sealed Air stock - I think that they make the bubble wrap and the packing stuff. Funny that these prices are going up because the prices of polyethylene and styrene have been going down to worldwide overcapacity.

If you have not checked out the Message board on the CB City website, you are missing out. There are tons of CB & HAM gear in there listed by all sorts of people. If you have something for sale you may want to post it there as well. In 2 months time it has had over 6,000 hits, so it is being viewed by a lot of people. Don't just take my word for it, check it out for yourself. You will be glad that you did.

It is located at www.cbcity.com

"Mailboxes, Etc." does both packing and shipping. Be prepared to pay the price, however. Charges will be approximately twice what buying your own new materials elsewhere would cost, with shipping charges and service fees running almost twice what UPS would charge if you brought the box to their customer counter yourself for shipping.

Well I use em all at various times. I've shipped or received around 30 items via UPS in the last year or so and still have not had a problem. I have received some stuff that was poorly packed that survived anyway.

The PO Priority service is good for small items but gets pricey as size goes up.

I use FEDEX at work for overnite shipments, but they are also too high priced for ham stuff or anything else that can stand a few days in route.

I tend to avoid buying from individuals who want me to pay for professional packing for typical ham items. Would be OK for things that need to be crated, like say a R390 or a 77SX. Bubble wrap, plastic peanuts, and cardboard boxes are easy to come by. I recycle packing materials and rarely have to actually buy any. I sort of assume that folks that can't handle routine packing are questionable and best avoided.

Packing:

Not all "professional" mailers are created equal.

I've shipped a substanitial number of valuable BA's using a franchise operation called "THE PACKAGING STORE, Inc." This outfit is a commercial grade packing and shipping company. Never had a problem. They custom build double wall HEAVY corrugated cartons, wood framed if necessary, and can supply a variety of internal support methods -- foam-in-place, etc. -- depending on the item, shape, and weight. Of course, since this operation is a franchise, not all may do an equal job. They're all over. Look in your local book, and if one is around, check the place out. (I have NO connection with this company other than being a frequent and repeat customer). Packing for a typical BA receiver in this place (HRO-60, 75A4, etc.) will run about $30. It's money well spent.

Mailboxes, Inc. and other friendly corner "mailroom" type stores typically uses loose fill foam peanuts. You're simply asking for trouble. If a packer brings out a typical consumer grade thin wall cardboard box and foam peanuts, take your BA elsewhere. Or just take it out front and trash it yourself -- saves the shipping cost :-)

Another way to reduce risk is to use 2nd day, overnight, etc. Air shipment simply minimizes the handling and effects of potholes.

Two cents -- and worth about that :-)

Jack,

Interesting correlation, which after thinking on past deals like
that, I tend to agree with. Often, too, these folks don't tell
you about the 3rd party packing being part of the shipping costs
and now I ask about that specifically, since being burned once or
twice by those substantially extra costs.

3589. WWV RECEIVER

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-03 00:00:00 UTC
From: "Dennis Polito (W6DEN)" <cloudhopper@earthlink.net>
Message-ID: <36DD8660.BBFEABE7@earthlink.net>
Source record: 88412
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

WWV receiver manufactured by Specific Products in Los Angeles CA., model WWVC, probably circa 1960. This receiver tunes all of the H.F. WWV frequencies, 2.5, 5, 10, 15, and 20 "MC". The unit is 19" rack mounted, 5 1/4" high and 9 3/4" deep. The weight is approximately 25 lbs. There are 16 tubes and one 2" CRT on the front panel. The receiver incorporates a Collins mechanical filter for improved selectivity. The original mechanical filter was a 7 pin vertical mount, this was replaced by an axial mount Collins filter.

Front panel controls: CRT intensity, focus, vert position, horiz position. On/off/speaker volume, R.F. gain, AVC on/off, Limiter on/off, BFO adjust, BFO on/off, Tick level, 5 position switch: ticks, 440 cps, 600 cps, voice, compare.

Several bananna posts on the front panel for high/low XY input and also hi Z output. Bnc connector on the rear for 50 ohm antenna input.

Large 5 position Rotary knob with bezel on left side of the panel to indicate which frequency you are tuned to. Right side of the panel contains a 2 1/2" speaker.

Receiver has been checked out and is in good electrical working order, it is on the bench operating as I type this. Crt is bright. Sensitivity is 1.5 microvolts for a clear A.M. signal. Speaker is a little raspy, may need some attention.

This receiver is a "5" out of 10 cosmetically. There are some scratches on the front panel, no dings or dents. There are no top or bottom covers but it would be a simple matter to fabricate covers from .024 aluminum stock. Sorry, I do not have a manual.

If you are interested, I can supply a couple of Jpeg images.

I would like to sell this receiver for $100.00, buyer will pay the shipping from CA.

3590. WTB: interstage transformer

I have 3 or 4 mil surplus modulator units from APS-104 search radar (likely from B-52 bomber - 1950s/60s vintage). These were used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual. Unused, still in original box, collector's item, $65 (pick up only - exceeds UPS size limit) from southeast Alabama. 36330 zip. NOTE: Please REPLACE the "ns45" with "wor" to spell "worley" in my email or call 334-347-5281.

The LF head with coils and UHF head can't be all that rare... I picked up a set with the 3 heads, all coils, power supply/meter, all manuals in excellent condition in a fitted wooden case for $40 , at which point I sold an LF with incomplete coil set, a spare UHF, and a couple of standard heads. All were bought over the years for trivial cash. I probably would not want to sell the set for as little as $295, although that would be a fair price for it. The performance of the 59 in all frequency ranges is outstanding compared to other brands, and well worth having if one has a need for such an instrument.

I need 4 small knobs for a SX99 with the silver inserts.
I think the knobs from a 38 would also work.
I could use knobs that the plastic is in bad shape as long as the
metal inserts are good.
I have 4 knobs without inserts.
Thanks Port

Hi George
I ended up with four complete units over the years. All in excellent
condition and all with brand new tubes. By the way they are the only
four I have ever seen anywhere. These instruments got bought up very
quickly about 2 years ago after some article that was written about
them. They are by far the very best there is in an instrument that does
so much and should be part of everyone bench. At $295 it's a steal.

Have you considered making some replacements? There really isn't much in
those old RTL ICs.

It's listed as a Quad 2-input NOR gate.

Don Lancaster's RTL Cookbook shows an equivalent gate made up of a couple
of NPN transistors. The emitters are connected to ground. The collectors
are connected in parallel; this is brought to the output pin, and a 640
ohm resistor goes from the collectors to the +3.6volt line. The bases
connect to the input lines via 470 ohm resistors.

I'll can't put my finger on a data book that would show the actual inner
circuitry; I'm not even sure I have a data book that would. But at the
time you'd see that sort of equivalent circuitry shown in the magazines.
I think it is about what was inside, though the resistor values might be
slightly different. I do recall an article that showed that sort of
circuit and suggested you could build your own RTL. It even suggested
2N706's for the transistors, which were small signal silicon NPN
transistors that were common in hobby circuits, much like the 2N2222 and
2N3904's in later years.

The data I have shows the 724 to be in a 14 pin DIP. If that's what
you've got (I can't find my Motorola Master reference that would give me
more details, though not the internal schematic) then here's the pinout.

pin 4 is ground
pin 11 is Vcc

1 6 9 12
3 5 8 14
2 7 10 13

I hope that's clear, and helps.

Hello,

I am trying to bring an old project back to life and need the following integrated circuit:

MOTOROLA MC724P RTL IC

I already know that there are quite a few surplus parts companies out there, but the trouble is that they want to sell me 100 of the darn things. I only need one or two.

Sooo...if someone out there has some of these things sitting on the workbench or in a parts tray AND are willing to part with a couple of them, I would surely appreciate hearing about it.

Please email if you need additional information.

73,

Jacob Worthington

I have posted a WTB for this transmitter several times in the past few months. I was only notified AFTER it was promised to someone else. I have not heard back about the status, probably sold well before I was notified. Appartently is not who wants something but who the seller likes. Telling me something has been sold is a waste of my time. This is why I revised my WTB ad. This should clear up any misconceptions about wanting a sold item. Why any sane person would want a sold item is beyond me. I will post this WTB ad a bit more frequently to avoid anyone saying they did not see the ad. If I post the ad and it is ignored then it is not my fault for not giving notice, it is the sellers for ignoring my ad. I will be sending ads to magazines for the transmitter. It is obvious I lost this one. :(

i posted this one a while back and not too many people seemed concerned. guess its time to post again...
i have a close ham buddy that works at miami international airport. when a package falls off the UPS conveyor belt it goes in the dumpster. the employees and supervisors both do it. this individual works nights and has witnessed it many times. i wont ship UPS, period. if its too heavy for USPS then i take the trnsfrmr out to meet weight limits. i have had usps only loose one and break one. i dont think thats all that bad considering i've sent over 60+ packages with them. priority mail is handled by a vendor. lots of the goof ups i hear people complain about are related to priority mail, not parcel post.

fed-ex is nice but their prices are out the roof. i'll stick with usps for now. havent filed an insurance claim yet so dont know what thats like. robert ke4mcl miami fl

From: Steve Pazar <zarco@sonic.net>
Message-ID: <36DF3E80.49E2@sonic.net>
Source record: 88463

Hi Gang,
I have a nice 19" cabinet that would be perfect for an
R-390, 75A4, or similar rack mount radio. It is 12" high and
14.5" deep. Navy grey with no dents and 4 large shock mounts
on the bottom. Very military, and very heavy!

I'd like to swap it for a 4 foot,19" rack, (in good condition), or
sell it for $35. The catch is I don't want to deal with shipping,
so pick-up only. Located in Sanat Rosa, CA. which is about 60 miles
north of San Francisco.

Steve
p.s.-its in the way and its gotta go fast or it'll end up at the
scrap metal yard

Source record: 88467
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: E.F. Johnson Transmitters and Accessories:

1) Ranger I Transmitter. I have two of them (and just picked up a Ranger II), so one needs to go. This one is probably about a 7 on a scale of 10. All of the knobs are original (the VFO dial seems to be slipping some), the crystal cover is there, and *appears* to be complete. It has not been plugged in since I picked it up. It appears to have some kind of minibox on the back that seems to be an antenna relay (one lead goes to the SO-239 antenna connector.) The front panel has some wear around some of the knobs, and like all good BA's, the case could use repainting. $275.

2) Pacemaker HF Transmitter. Just picked this one up at an Estate Sale today - not knowing better, I thought I was getting a Valiant. But after looking through some pictures on the web, I see that the meter is on the right side of the front panel, not the left. In the pictures, the Johnson logo is shown on the left side, but not on this particular one. The front panel has a couple of extra holes (one for a PTT switch which is not installed, the other is for a toggle switch for ???) The meter doesn't appear to be the original one - it's just hanging loose in the hole where the original one was, and looks possibly like the hole may have been enlarged some.
The inside looks pretty nice and clean, and nothing appears to stand out as having been hacked up. The case is OK, but certainly needs cleaning and painting. If you're a BA reviver, this might be of interest to you, or if you need a Pacemaker for a parts rig.....$135 .

3) Johnson Viking KW Matchbox - good condition, some scratches but overall pretty good. Has the meter and Directional Coupler, and a manual copy. $300.

4) Johnson Viking 275 Watt Matchbox - Front and case in good condition (the cleanest one I've seen), an extra 1/4" or so hole on the back side. The back also has a row of small holes near the top - not sure if this was original or not - can't imagine why they would be there. But still a nice looking Matchbox. No meter - includes copy of manual. $100

Prices do not include UPS shipping from Portland, Oregon.

I am looking for plans/schematic to build a moderate powered (40-75 *output*) AM transmitter for 75 meters, or even 75/40.There was a project in CQ magazine last year, but that one runs only 10W out on 75, and I really want something that will do closer to 50. Recommendations on old issues of QST/ARRL Handbooks? I've also been thinking of subscribing to Electric Radio; do they run articles on such projects? Thanks a bunch!

Hi Will:

Yes, Electric Radio has projects such as that from time to time, although any old handbook would give you ample infomation to design around the parts you find. It is fun.

Generally a handbook from 1946 through 1960 would be fine. Hit a local swapmeet and you should be able to find one for $5 to $10.

Good luck and 73, Colin K7FM

3663. FS: Classic BA UTC/Triad power transformers/chokes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-05 00:00:00 UTC
From: remler@ll.mit.edu
Message-ID: <remler-0503991159360001@129.55.72.78>
Source record: 88288

Classic power transformers/chokes ideal for classic boatanchor equipment....note the very hard-to-find 7.5VCT filament transformers! I have the following 60-Hz units for sale:

1 each: UTC "Special Series" S-33 Filter Choke, 8 Henry, 300 mA, 100 ohms, 4000V test.
1 each: UTC "Special Series" S-34 Swinging Filter Choke, 4/20 Henry, 300 mA, 100 ohms, 4000V test.
2 each: UTC "Special Series" S-58 Filament Transformers, Primary tapped 105/115 volts, 3 secondaries: 5 VCT, 3A; 6.3VCT, 4A; and 7.5VCT, 5A, 3000V test.

All four transformers/chokes are in very good used tested condition, with minor scruffs on the case paint and some flaking near the mounting holes. Metal ID labels are excellent.
All four transformers/chokes are sold as a set for $89.73 shipped postpaid anywhere in the continental U.S.

I also have a new, unboxed 450-watt Triad P-14A Plate Power Transformer with a tapped hi/lo 115 V primary; output is either 1780 VCT at 250 mA (using the hi primary tap), or 1425 VCT at 250 mA (low primary tap). Cost is $39.73 shipped postpaid anywhere in the continental U.S.

I plan on going to Dayton for the first time this year. My understanding is that most people endup parking a half mile or so away. Trying to move a boatanchor that far is about impossible. There are busses that can take you to your car, but I'm not sure what would be considered too large to take on the bus. They also will allow you to park close for 20 minutes. But if you are by yourself, that may not be enough time to park and go back and get the boatanchor, and haul it back to your car.

If you plan on buying boatanchors at Dayton, it might be a good idea to take some kind of luggage cart. It helps also to have someone with you in moving stuff out to your car.

Like I said this will be my first Dayton Hamvention, so it will be a learning experience for myself also.

Hi Simon,

Dayton is not quite Boatanchor heaven, but it comes close. :-) The good stuff sells early, though, so be there at first light if you're buying. I have found that many sellers only attend one or two of the days, so new "finds" show up daily.

If you have the time and inclination, Fair Radio Sales is a must see, and it is only about an hour up the road from the Hamvention.

Please stop by my table and relieve me of some [junk] great gear. :-)

73,

Tony N8SNC

See you in the Dayton Fleamarket - Tables 2149 & 2150 (I hope)

Source record: 88301
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Not so long back, I got hold of a National HRO-M [the one with an S-meter and 6C6/6D6 tubes. It's in almost "as new" condition, with nothing having been replaced but a few capacitors and one or two resistors.

I can see *roughly* how the S-meter circuit works.

If I have followed the schematic right, the S-meter is in a bridge where the screen grids of the four AVC-controlled tubes are in one leg of the bridge and the plates of the last two AVC-controlled tubes are in the other leg.

If there is anyone out there who has figured out how this was designed and how it *really* works, I'd be very interested to get a message from them.

Cheers,
Martin

3680. Value of NC240D and Viking 2

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-05 00:00:00 UTC
From: xxxtoneri@ils.net
Message-ID: <36e0555c.6118809@news.tor.sfl.net>
Source record: 88305

I am trying to find out how much these two items are worth. Value is a rather subjective thing when it comes to boatanchors but any help is worthwhile to me. Here is what they are:

A National NC240D receiver with matching speaker. It has been in storage since the mid 1950's but it works. It needs new electrolytics but other than that and a good cleaning it looks and works fine. The cabinet is in very good condition for its age with a few scratches here and there. The dial is in very good condition and readable. The matching speaker is in excellent condition.

The Viking 2 is also in very good physical condition. It is all original, no modifications. I did not power it up and it probably needs new electrolytics as well. Other than the dust inside, it looks excellent.

Any help on determing a price/value of these items is appreciated.

73, Mike VE3FGU

Hi Scott,

Is your Gonset Communicator IV the 2 meter or 6 meter version?
What shape are the front panel and cabinet in? Is everything
"original" (knobs, meter, etc.)? Do you have the manuals for
the Communicator IV and the VFO?

I'm quite interested, if it's in really "clean" shape throughout.

Thanks,

-bill

3698. Restoration hints ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-05 00:00:00 UTC
From: dalien <dalien@pacifier.com>
Message-ID: <36E0D049.B2BEC5FF@pacifier.com>
Source record: 88323

I'm about to restore some old Heathkits, starting with power supplies.
How about some good hints or tips or a list of things to do when
restoring 30-40 year old gear, like:

1) Replace all electrolytic capacitors.
2) Replace all higher wattage carbon resistors.
3) Replace weak tubes.
4) Replace power cords.
5) Replace ..... ?

At some point it almost becomes easier to take the parts list to the
store and just start over. Maybe that is the way to go, especially with
old kits which use mostly descrete parts.

Any thoughts?

-Dave

For sale, as lot only, not inventoried:

at least 50 tubes, NO TV junk, mostly octal, all usable
stuff for antique radios and shortwave receivers...includes
12sk7, 12sc7, 6sk7, 83, 42, many more "metal"tubes and
some glass octal....no industrial crap, no tv stuff ...90%
usable in broadcast, shortwave, power supply, etc...
some (a few) miniatures, 50c5, etc, for table radio....

NO RARE AUDIOPHILE TUBES....this box is excellent stock
for the radio collector/restorer...popular types in
AM, Hallicrafters, etc. stuff, mostly pre-war up to
late fifties.

Whole box $45 shipped conus

Thanks, Walt

Colin,

Sounds like a fair price.

You might mention if the DC power cord is for 6v or 12v.

Great little box for AM & MCW, and with an old mod, can do FM & slope detection.

73,

Plum

Haven't had to do this yet, but if you remove the 4 phillips on the side panels (plastic) and the bandswitch knob, I believe the entire front panel will tilt forward- possibly gaining access to the VFO lamp.

Hi,
You can use 1N4007, 1000V PIV, 1A for almost any power supplies. For signal diode, it is different, 1N4148 will do for silicon diode and 1N270/277 will do for germanium diodes.

An R-7000 (different from a Royal 7000) typicall go for $300 - $400 depending on condition. I've seen some exceptional ones with papers etc. go for $1000. There were three different models; you should check to see which you're getting. Best of luck.

3719. HELP re. Atlas 180?

Anyone know of a reflector specific to the vintage
Atlas rigs?

I am acquiring an Atlas 180 and it is coming only with a
partial manual. I'd like to acquire a clean copy (or a scanned
copy) of the compete manual and schematic.

Mods, etc. would also be appreciated. This may be my
only rig for a few months and I'd like to maximize it.

Thanks! & 73,

Simon,
Its a fair bet that it'll work. I must admit that I've always worked on
the basis of, within reason any size will do so long as its no smaller
than the original.

Chose one with a decent ripple current and 16 + 16 or 32 + 32.

You're quite correct; that replacement should work just fine. I
have an old Hallicrafters S-38C that is working fine after I replaced
the original 60-40-40 uF filters were replaced with new capacitors
totaling 100-47-47.

In fact, it works _better_ than new (less hum because of more
filtering).

Yes, fine. If there is a surge limiting resistor (not usual in sets where the rectifier takes time to warm up), you could consider increasing it say 10% but I would not worry. Old sets were built with huge margins; also a capacitor labelled 8 uF could easily be getting on for 16 in reality.

From: Markus Thomerson <mdt@powr.net>
Message-ID: <01be6768$d5ad0ba0$9ad7050c@mdt>
Source record: 88326

I have for TRADE only at this time a coil for the National HRO series receivers. Specifically it is the # 7 coil (non-bandspread) for the RAS-1 (Navy version of the HRO Jr.) receiver. I have an HRO-5AT1 and the coil works just fine in it. I wish to trade this coil for a B coil (non-bandspread) for the HRO, or maybe coils for a SW3. As I said I am not interested in selling the coil at this time. The unit can be seen at: http://users.powr.net/mdt/images/coil.jpg

3731. SWAP BOATANCHOR STATION FOR SOLID STATE HF RIG

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-06 00:00:00 UTC

Message-ID: <01be6771$65adb1c0$df8492d0@Bit-Net.bit-net.com>
Source record: 88327

Have had to clear out the station to pay some bills and
to buy a laptop for work. Now need to trade my Multi-Elmac
station so I may continue some SSB emergency and
missionary traffic work. Will acquire another boatanchor
AM setup once relocated to Florida this Spring ...

SWAP BOATANCHOR STATION FOR SOLID STATE HF RIG

Multi-Elmac Mobile Boatanchor AM/CW Station
a. AF-68 80-6m AM/CW transmitter (excellent audio)
b. PMR-8 BC-6m AM/SSB/CW receiver
c. M-1070 AC & DC power supply
d. Heath pre-selector
e. D-104 mic (functional but needs a little tlc)

All in excellent condition (except as noted). PMR-8 has been modified
with a Galaxy tuning knob assembly to make tuning more accurate.
Includes cables and manuals.

Will trade for a solid state HF rig (SSB is primary mode, rig must have
provision for and preferably include a 1.8kHz filter)

Prefer local swap in So. NH or central MA and will include a GAP
vertical (needs some tlc) if the swap is local ... will discuss shipping
options for a non-local deal (minus the GAP).

Thanks! & 73,
~~~

3734. Re: How does the S-meter circuit in National HRO work?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-06 00:00:00 UTC
From: skywaves@bw.webex.net
Message-ID: <7bq8fn$c0$1@nnrp1.dejanews.com>
Source record: 88330
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

The S-meter monitors the plate current of two of the gain controlled stages by reacting to the voltage drop across R11. The plate current decreases with increasing signal strength (more negative AVC voltage). The bridge is necessary to make the meter read upscale as the voltage drop across R11 DECREASES. Because of the remote-cutoff characteristics of the 6D6's, the meter reading is roughly linear in decibels, which is highly desirable.

How seriously do you want to do AM - the who 9 yards with 6L6's and modulation transformers or will double side band be adequate? Reason for the question is that I saw an Analog Devices chip which could, conceivably, be used to generate an AM signal.

Simon,

You will find more boatanchors (and the kitchen sink) at Dayton than probably any other hamfest here in the US. Hope to meet you there. The Collins Collectors Association will be sponsoring a dinner on Friday evening. Are you interested ?

73,
Dave, K2DP, St. Louis
collector of Collins and Hallicrafters radios

I restore heathkits
Besides what you plan to look fore here is some more things to look for.
Westinghouse tubes to give low power output
Look for Domestic NOS..... GE RCA Raytheon, etc.
Leave a stored rig on 2 times for at least 12 hours before changing things
,some VFO parts must stabilize if they were stored a long time.
Replace out of tolerance plate and cathode resistors (major culprits)
Check VFO drift ..the NPO temperature compensated caps may have gone bad.
And do not get electrocuted there are some really high voltages in these old
boats...see http://www.mcs.accessus.net/heathkit/wwwboard/wwwboard.html
http://members.accessus.net/~dwentz/kb9jja/heathkit/
This are the 2 best pages for Heathkit
Good luck ....from Joe..... audio engineer

>
>KRIS has been a CB box from day one.
>10 - 6 meters indeed,
>Back atcha good buddie

Perhaps this "Big Boomer" is one that was calibrated/modified for 6m/10m at the factory. There is an original KRIS, Inc. sticker on the rear chassis panel which says:

"This unit produced for exclusive use on amateur bands 10 and 6 meters. Any other use is illegal and subject to federal prosecution. Kris, Inc. Use 10 AMP Fuse Only"

I do understand that KRIS was a manufacturer of CB ecquipment, but had knowledge of the CB to 6m/10m conversion. My guess is to find out if anyone else has this Sticker on their KRiS Big Boomer.

Thanks for your reply!

>Any help would be greatly appreciated. 73 Jeff, W9GY
>
When I was a punk kid, I worked summers for Eldico
assembling transmitters. I vaguely remember building a few
of those transmitters. I think it ran about 300 watts on
CW. I do not have the schematic, but I do have the ARRL CD
ROM for the 1950-1959 era. Possibly I might find a review
or an Eldico ad in there that would refresh my memory. I
don't think they made many of those rigs and you are the
first guy I ever heard of who still has one. In that same
era they made a TR-75TV which used a 1625 at 75 watts the
legal limit for the brand new novice class license.

I'll check my CD ROM in the next few days and see what I can
find. As I remember, the design was pretty straight forward
and if worse comes to worse you should be able to reverse
engineer the schematic.

Lane:

Best be carefull about those capacitors. Aerovox has been around a very long time, and, prior to about 1975, oil-impregnated capacitors meant Arochlor, Monsanto's polychlorinated biphenyl. Really good for capacitors (and HV transformers), but now an Officially Nasty chemical ranking right up there with dioxin and DDT. Asbestos fibers are mild compared to PCB's. Should somebody make this into a cause, the guys in bunny-suits will want to de-contaminate your house to about 3 feet below ground level.

Comment regarding the Military Wireless Amateur Radio Society
(sic)

Well it seems that the committee at MWARS is doing all it can
to discourage members from being such. Instead of doing all it
can to attract and keep members it is quite happy to
aggravate and annoy members so that they leave. The latest trick
it to forget to send members reminders about subs then, when they
are over due, a note is sent telling them that they are now "over
due" and if they fail to pay up they are out. No nicely worded
reminder though, something like "I'm sure its an oversight but
please send subs soon", oh no, a turst rough "pay up or else"
message, equally matched by a total disinterest and couldn't care
less attitude shown during a phone conversation. So, obviously
the MWARS do not want members, or at any rate certain members,
like those with large collections, acres of documentation and
world wide contacts. A club to avoid like the plague.

Ben G4BXD.
documentation and world wide contacts. A club to avoid like the

Very nice, 75A4, SN 29XX Has the 4:1 reduction tuning and
the 3.1 kHz filter. Operates OK but should be re-capped before much use.
No modifications or even any of the service bulletins
have been done. Original paint is so good it will not need a paint job.
There are only tiny chips from the corners. Comes with original manual and
a bag full of the "Orange Drop" capacitors for replacing all those leaky
paper jobs.
Price is $650.00 plus shipping from Atlanta, GA.

Allan Cutts, N4OZI, was worried about lugging the boat anchors out to wherever you've parked. It's not as much hassle as some folks think but you do need to plan. There is a secure holding area (like the luggage room at a hotel, behind the concierge's desk) where you can store anything you buy until you are ready to fetch it out to your transportation. If you are using the busses, everyone is pretty understanding (with a few wisecracks) if you have to lug a boatanchor aboard; they are "city" busses, and so have the wider doors, aisles, etc., than over-the-road busses. So it's not too bad to park in the malls (I favor Salem Mall) and ride back and forth. If worst comes to worst, the Hamvention Committee arranges a flat-rate structure with the major local taxicab company, so you can always get a load out to your parking location (again, the Malls are good for this) for ~$10 US plus tips...might want to consolidate loads, though, to cut down on the trip costs! :-) Finally, Allan's advice to take a luggage cart is a good one. Most of the flea market area is paved, and aside from ruts and stray gravel, fairly negotiable by luggage cart. The big covered tent area at the northwest corner of the flea market is all gravel-based, though, so you'll need to park/guard your stuff outside rather than slogging through there with it. I've often wondered why more little kids (junior ops? harmonics?) don't rent out their little red wagons...but a number of those who drive to the Hamvention do bring wagons, dollies, etc., for the very purpose you're considering. Good luck to Allan and all on their first Hamvention experience. Prepare to be blown away!

One more thing I forgot to add about moving your boatanchor finds out to your transportation...the holding area, on the east end of the building, (at least in the past), solves the problem of getting to the transportation (busses) or using the 20-minute parking pass...you can take the bus to the Mall, for example, fetch your car, pick up the 20-minute pass, load from the luggage/holding station, and out to the Mall again where you pick up a buss to do it all again :-). Again, takes a little planning but the suggestion to shop early and often is another good one. Bon Appetit!

Why would you expect anyone else to ship something better than you would do it. People just do not care about your stuff no matter how much you pay them. I had a summer job where we would ship air compressors and air motors and we would make sure the packing material did not contact the products being shipped. We wrapped all units in plastic. This should be the first thing when shipping any piece of electronic equiptment! Next try and ship it in the original box within a box. Peanuts are great for the outer to inner box packing material. Peanuts will compress during shipping so you need to have a tight box. By tight I mean you have to feel like you over stuffed the box. If the box closes easy you do not have enough! I like to use a lot of plastic tape (3M is good). The cheaper brands are thinner and you have to use more. This gives the box some strength around the areas the box can seperate, ie corners and seams. The item you are shipping should not move when you are finished. A good box is a must, I like paper boxes for mobil to hand helds. Much bigger boxes for heavier units. If the sender is getting cheap about the shipping then do not buy the item! Whats the point if it does not work when you receive it. If you are spending a thousand dollars on a radio $20 is not alot to pay for it to be packed well. To me $20 is not high for a $300 dollar item. I have actually used new paper, if you pack it tight it will work for light items, double boxed of course.

3759. Boatanchors For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-06 00:00:00 UTC
From: Marv Luse <mwluse@dimensional.com>
Message-ID: <36E14FD5.61110DDC@dimensional.com>
Source record: 88355

When I recently got back into amateur radio after a haitus of almost 30 years, I was overcome with nostalgia and bought a slew of boatanchors that I intended to restore. It's now clear to me that I don't have the time and I hate to see these just sit in my shack gathering dust. So I am offering them up for sale. Note that these are generally for someone who wants to buy a rig to work on. Here is the list.

Hallicrafters SX-117 receiver, HT-44 transmitter, and matching PS-150-120 power supply/speaker. These don't work but are in excellent physical condition. All original knobs. The receiver is missing the red plastic "h" logo, otherwise all front panels are near perfect. Chassis and components look good, but obviously some bad components. Includes original manuals. Make me an offer.

National NCX-3 SSB Tranceiver and matching power supply and speaker. This one works, but not well. I have made a few QSOs with it. The transmitter only develops full output on 10 meters (odd, huh?). Excellent physical condition. The only blemish is a 1/2" circular defect on the top of the power supply cabinet. Includes original manuals. Make me an offer.

Hammarlund HQ-170 receiver, HQ-110 receiver, and HX-50A transmitter. Both receivers have working clocks and work reasonably well (could use an alignment at least). Physical condition is good. All original knobs, no obvious dings, perhaps a tad faded looking. The HX-50A has been modified and does not work. No manuals on any of these. Make me an offer.

Drake TR3 and AC3. The tranceiver is in good physical condition except for a large rust spot on the chassis. Externally quite good. Does not work. The power supply has no cabinet. Includes manuals. Make me an offer.

Thanks and 73

Marv

I have 6 pcs 250TH Lewis and Kaufman - probably made on license from
Eimac - for sale. These are brand new, in original super heavy duty
military boxes. Never been used. A very nice valve, indeed.
E-mail me if you are interested.

Best regards,

Arnold Goksoyr

Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.ham-radio,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.amateur.equipment

I have found some of these excellent 6B4G valves. 6C4C in Russia is
equivalent to 6B4G and it looks identical to the old Sylvania 6B4G
with double anode stapped together by a metal plate, not the type with
two separate anodes. The 6C4C valves is very well built and give you
an impression of high quality. It is unlike the new Sovtek 6B4G which
looks like a scaled down Sovtek 300B with a single anode.
E-mail me if you are interested.

Best regards,

Arnold Goksoyr

Source record: 88359

Well, it was bound to happen sooner or later.....The dial cord on my
good ol' Apache snapped, and my copied/partial manual does not have a diagram
of how to re-string it. (this is the cord that moves the pointer along the
slide-rule).
Does anyone out there have a dial-cord stringing diagram? Perhaps they could
just scan it and attach the image to an email?
All contributions would be greatly appreciated!
Thanks in advance....Neal B. (NB1HF)

I have a few things to list:
1. For that boatanchor lab: a nice signal generator hp 608f (goes to 450mhz) and phase lock unit: hp 8708 synchronizer for 608 signal generator. (Phase locks it)w/man. $100 each, or $175 for both.

2. Racal Dana 5001 5 1/2 digit lab DMM excellent shape $90

3. Atlas transceiver 180 covers 160-20m. 100 watts works good $100 partial manual

4. Yaesu FT 720 440fm xcvr with remote cable and pl enc/decode $80

5. Heath SB110 6 meter xcvr, ps, man. new finals and spkr $250

6. Frequency Source LO brick, power supply and TCXO on 1152mhz $90 great LO ready to go for that 1296 rig.

7. Create Systems Log periodic 108-1300mhz, manual $125 good shape.

All prices are either pick up or buyer pays shipping

Check the specs on the 1N400x series (ex:1N4007, etc.) and see if one of
them will work in your application. They're cheap and available almost
anywhere. About as "generic" a diode as you'll find.

These are certainly very common 1-amp power diodes; try the 1N540x
series for 3-amp diodes.

No tubes-no chimneys-no supply. Works great. Kept it as a spare. I have two other L4Bs and do not need this one. Front panel looks very good. Top cabinet cover has a small dent the size of a quarter; other than that it is excellent.

Plenty of room to add 160 and QSK. Use your HB 3300 volt supply for legal limit out.

Will be professionally packed (by me) and insured appropriately.

Buyer pays shipping from San Diego 92139.

$300.00 plus shipping from San Diego 92139

I have several pieces of Measurements and Lampkin test equipment for auction. They all work. This is a good way to get some quality equipment cheap. Go to this link and then hit "view sellers other auctions" for the rest of it. I only post on here, when I really think it's a great vintage item that someone on boat anchors might want.
Thanks Jack

Thermionic rectifier anodes run hotter when the size of the reservoir (the first) capacitor is increased, even though the average (DC) value of the anode current may remain unchanged.

Suppose the reservoir capacitor is doubled. Theoretically, the peak anode current will also double but will flow for only half of the previous time. The anode dissipation at peak current will *quadruple* (current squared). The end result is average anode dissipation is doubled.

In practice, the circuit is somewhat self-regulating. The peak anode current does not increase to twice its previous value because the cathode electron emission is limited by area and temperature. The effective anode resistance increases which increases the time taken for peak current to charge the capacitor. So the current pulse does not quite flow for only half the previous time.

The ripple voltage across the reservoir capacitor halves and the average DC value remains unchanged. This has the effect of increasing the anode to cathode voltage during the time the peak current is flowing. So anode dissipation increases on this account also.

The leakage reactance in the transformer also prevents the anode current from exactly doubling. Neither does it allow the current pulse to fully reduce to half its previous time.

All-in-all, the valve runs someone hotter and will have a somewhat reduced life on that account. It will become soft sooner and cathode emission will decrease faster. On the other hand, if the valve is running well within its ratings, the change in end life will probably not be noticed.

All this applies only to the reservoir capacitor. The capacitor on the other side of the smoothing choke can be doubled without hardly any effect on the rectifier.

From: swenger@csj.NET
Message-ID: <36E29CD3.72B0C40F@csj.net>
Source record: 88189

Greetings,

I have to do some business traveling and thought I might take the opportunity to do some spring cleaning. The following items are pickup only either at my QTH or anywhere along the route.

National HRO-50T with coils A, B, C, & D. It works and is complete but it has been repainted. The color is slightly lighter than the standard gray for HRO-50, more like an NC-173, manual included - $275.

National HRO-50R1 with coils A, B, C, & D. It works very well, is complete, and comes with a case made by National for the rack mount model, manual included - $475.

Johnson Invader 200, loads up to correct power on 80M only (both SSB and AM), but not on other bands. I suspect it is an alignment problem (procedure more complex than straight AM rig), I just have not had time to go through it, manual included - $200.

Thordarson CHT series (deluxe model) T11M78. This is a 500 watt multi-match modulation transformer, includes original documentation - $125.

Chicago Standard 120 henry modulation reactor, weight approx. 70 lbs. - $100.

Travel route:

Friday, March 19, Jacksonville, Il. to Rockford, Il. (I39); then to La Crosse, Wi. (I90).
Saturday, March 20, LaCrosse to Minneapolis / St. Paul through Eau Claire, Wi.(I94).
Sunday, March 21, back to Jacksonville, Il.

Friday, March 26, Jacksonville to Kansas City through Mexico, Mo.(I54 & I70).
Sunday, back to Jacksonville, Il.

Hi Don, thanks for the info, general opinion seems that it
should be ok. I'm not used to these broadcast sets, this one
has a field coil in the speaker instead of a choke so I just
wanted to be sure.
My message signature is a bit ambiguous isn't it. A Z1000
LTD is a Kawasaki motorcycle circa 1985 and I presume
you are aware of what an RA 17 is, I have 2, unmounted.
No I don't have the set mounted on the bike but it would be
a novelty at rallies.
I also have a 137 LF adapter which takes coverage from 30mhz
to
500khz on the 17 then an overlap from 980-500khz down to
10khz
on the 137.

Simon.

No, I don't think so. There was a huge electronics industry in
existence in Britain at that time. I have never heard of shortages of
electronic components at that time. I can myself remember the
shortages of many *other* things [eg I rememeber my mother
telling me how wonderful life would be if she could get
some rice - something I had never seen in my life at that time].
My dad would drain the radiator of his car each night in winter
because anti-freeze was unobtainable.

Also I have several radios from other makers at that period
which have ECH35s in them.

Eddystone seemed to like having valves from several different
makers all in one set.

Martin

3798. Re: 6K8 vs ECH35 ? which better

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-07 00:00:00 UTC
From: Martin Ackroyd <martin.ackroyd@virgin.net>
Message-ID: <36E29FDE.1F0DC1ED@virgin.net>
Source record: 88193

Hugo,

As another owner/user of an Eddystone 640, this is an interesting question
to me. I don't know the answer. There has been some discussion
in the Eddystone User Group but no firm answer emerged.

As you point out, the ECH35 is a very different valve from the 6K8
- the signal grid is grid 1 in the ECH35, but grid 3 in the 6K8.

The conversion mutual conductance [250V anode, 100 V screens:
650 microamps/V [ECH35] but only 360 microamps/V [6K8]

Anode resistance :
1.3 Mohm [ECH35] but only 600 kohm [6K8]

[data taken from mullard maintenance manual - Mullard sold both types]

Also, the heater current of the ECH35 is 0.225 A, compared with 0.3A for 6K8.

So why did Eddystone chose a valve that is apparently inferior to the
ECH35, when they were already using the EF39 [and the EB34, I think] in
the set?

Which packs up first at high frequencies? I don't know.
I would SURMISE that Eddystone found that the 6K8 had some
definite advantage - lower cross modulation? Better stability??

Also, note that the EF39 is definitely not a direct equivalent of
the 6K7, even though they can normally be used interchangeably.
[Though not in sets with series heater connections]
Performance of the EF39 is significantly better than the 6K7.
[Better ra and better gm, plus only 2/3 the heater current].

My Eddystone 640 has been got at. Someone has replaced the 6K8 with
a 6SA7 and a 6C4 as a separate oscillator. Otherwise, it would
be straightforward to compare the sensistivity and frequency
stabilty of the set with ECH35 and 6K8.

Cheers,
Martin

Hi,Be careful in replacing 6K8 with ECH35 as metalising pin of ECH35 may have been
used as an 'anchor point' in your 640! 6K8 isn't metalised so no metalising pin!
In Eddystone User Group newesheets there is a reference, that Eddystone's
service dept. always recommended a 6K8, even tho'ECH35's may be available.
The inter electrode capacity is also different, so on the HF end the receiver may
be slightly mis-aligned as well!

Regards
Albert.

I use Plasti-Kote color GM 3850 to paint Johnson cabinets. It is as close as I could find without mixing to get the exact color. One spray can does two coats on a large cabinet. Be careful, it will run easily. Bought it at Pep Boys auto parts store.

3813. Johnson/Swan HELP!!!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-07 00:00:00 UTC
From: Dana Jensen <danaj@ibm.net>
Message-ID: <36e2e048@news1.us.ibm.net>
Source record: 88208

I'm looking for some help from some kind soul. I have an old Johnson Viking Invader (only Johnson I have never owned). It works but.....the stringing for the bandswitch is gone! The manual does not clearly show how to fix it. Does anyone out there have documentation or know how to fix this? Other than that this "boatanchor" works. I might even consider selling it to someone if they want it.
Seeking sweep tubes (hopefully RCA ones) for back end of Swan 500CX. Also this xmitter will not tune or load (have a pair of Jap. tubes in it right now). Thoughts? Tubes? Another excellent piece of equipment once we get this resolved. Tubes are 6LQ6 or 6JE6 or 6MJ6 Please no "profit takers". I am disabled and don't have BIG BUCKS! Also remember if you're from US I have to tack on 50% (!!!) to whatever you ask.
FS:
Hammurlund HQ100C - this receiver is in (my opinion) perfect condition. No scratches, dents, rust, nothing! Looks like it was stored for 40 years! Great working condition. Hammurlund speaker included. Offers to email below....
Johnson Viking Invader - as mentioned above.....works except.....
Heath SB401 - this thing is gathering dust unless someone has a reasonable priced SB301 to go with it they don't want..... It works, cabinet is good, inside shows a little rust on power xformer (probably from elements) chassis and tubes all good.
KW2000A - oldie goldie.....working condition excellent looks.....(beware of British tubes)

My wish list:
a Yaesu FT101 (any series) in good working condition.....I've owned B and EE and both served me well.....
Please email to the address below..... DO NOT POST TO THE LIST I don't read it that often but I check my email constantly.
Thx!

Dana Jensen

charset="iso-8859-1"

Hello all out there!

I friend, SM4ND, has an Super Pro =
600, with=20
serialnumber 18179, and i have an SP400X with nuber 4 X 2350. =

My frend`s rx =
is a SP600 but=20
his manual says SP600JX. Does the numbers tell teh thruth??

Newly I got the Hammarlund HX500 on the air but I am =
still=20
missing the LV transformer to my Viking Valiant! Does anyone have one in =
spear=20
to sell?

By the way...this is the first time I write here, =
and will=20
tell you that I love to be here!

Regards
```

The ARRL keeps a list of upcoming hamfests and conventions at their site at http://www.arrl.org Though whether a local hamfest is listed there undoubtedly depends on whether the organizers or one of the locals sends the information ot the ARRL.

In Canada, the Radio Amateurs of Canada keep a similar list. They are at http://www.rac.ca

I have been going to the great mecca for 17 years now and
be thankful it is not still being held on the last weekend
of April
as it was for so many years. One year a total rain out,
another
3rd degree sunburn, and one year there was a tornado in the
vicinity
followed by snow flurries the next day. What a place!
Still wouldn't miss it
unless too sick or dead! May is a MUCH better time of year
for weather in
Dayton.

Price reduction.......Must sell
I have a beautifully built Sailor HF AMP. This one has two RCA 8122 ceramics tetrodes which checked out full output. 1.8MHz to 30MHz All the tuning is done with servos and the band settings are set with brass slugs. Built under high standards, rackmount, very high quality components including a large cooling fan. It was removed and fully functional from a cruise ship that went to solid state. This amp puts out about 800watts with very little input. It has a built on solid state pre-driver stage which can be bypassed if need to. It's complete and in excellent condition. It requires a power supply and controls for the servos. No manual but can be found at marine electronics shops. Sailor is still the leader in Marine and satelitte communication networks. I will send jpgs by request to anyone interested. I want $350+shipped for it. The tubes alone cost that! Roughly 45 lbs

From: Dana Jensen <danaj@ibm.net>
Message-ID: <36e335df@news1.us.ibm.net>
Source record: 88224

Are you referring to DC input power or PEP? Turn down the drive and you reduce the output for DC. The 6CL6 driver would produce on it's own about 3 or 4 watts, but then you still have to "match" it.
Why do you need to reduce it that much?
You could also use an outboard attenuating device as well.
Personally, I don't recommend removing tubes as you upset the plate voltage, screens balance as well as the filament voltage balances too.If you really must, put a "dud" (non working) pair of 6146s in there....otherwise leave it alone, reduce the drive to reduce the output, or buy or build an outboard attenuator.

OK guys this is it for awhile. This is R390a is just finished al
cleanded inside and out . This radio is a Stewart- Warner in other
words it has a EAC RF and OSC module in it and all others are Stewart-
Warner . The IF has the Cap mod done and I hve checked all other decks
and I don't see any ohter problems . I did a touch up alignment and this
is very hot radio . I want 425.00 + shipping The front panel has been
done as well as the knobs. Has original meters . I will throw in the
The Tag on the panel for Stewart -Warner . Its ready to go . The first
to comit will get it . I am going to now speen some time on my own rigs
I have many projects to finish .I will take a break for now until I get
another load of R390as in and I will let everyone know when I get back
to working on these new projects thanks again .

Not when going from 60-40-40 to 100-47-47 in my S-38C.

Then again, it's kind of hard to say, given that the radio I did this to was dead (probably hadn't been turned on in decades) when I bought it, and the electrolytics were all dried up. But it's been several years since the capacitor-replacement surgery, and it's still on the same 35Z5 I installed to replace the one with a broken filament the set came with. (And that radio gets almost daily use.)

Gas tubing as used in school chemistry laboratories. It snakes around until touching the bulb; then you can push and it will (eventually) grip the bulb and allow you to unscrew it or unbayonet it, as the case may be. Needs patience; and sometimes a dentist's mirror.

The 1N4001 rated at 1 kV (I think), 1 A seems to work fine in place of all the rectifiers I've come across.

NOT always OK for thermionic diodes, because they provide built-in surge prevention. Just add a suitable series resistance, say 100 ohm 5 watt to experiment with.

NOT suitable for replacing signal diodes, either.

From: Hugo Holden <hugo@sun.big.net.au>
Message-ID: <a8mE2.271$GD.858@nswpull.telstra.net>
Source record: 88256

Hello, does anyone out there know the qualitative difference between these two tubes. I have an eddystone 640 com receiver (1948) that can use either, This British set came out with the 6K8 from new, rather than the expected ECH35, they must have chosen the 6K8 over the ECH35 for some reason?. Most of the other tubes in it are British design eg the EF39 (like a 6K7). The grids in the ECH35 are configured differently than a 6K8 although the tubes are plug in interchangeable with minor re-tuning. My own experience with the 6K8 is such I know it will perform up to about 45 Mhz before it bombs out.The ECH35 is said to be a true triode /hexode convertor, unlike the 6K8. Do you know which tube has the better conversion performance at around 30MHz or lower?? Thanks Dr. Hugo Holden (Australia)

> sure but you never know.

Only silly question is one that isn't asked!

Yes, a 16+16 will do, provided the voltage rating is at least as high as the original capacitor.

The price of a capacitor goes up with the uF value. A 16+16 was (in 1946) more expensive than a 16+8, so if they only needed 8uF in the second section, that's all they'd use.

Actually, you don't want to go *too* far -- using a 16 + 1600 might be a problem (it'd draw too much "surge" current & burn out the rectifier) but 16 + 16 is plenty close enough.

There are 3 kinds of diodes you're likely to find in you Heathkit:
1) Rectifier diodes
2) Silicon small signal diodes
3) Germanium small signal diodes.
For most power supply and rectifier applifations, the 1n400x series are a good generic substitute, as long as you observe the breakdown voltage ratings. For most common small signal applications (detectors, low level switching, etc), the 1n4148 silicon diode is a good choice. For some low level RF detectors, it was common to use a germanium diode such as a 1n34. If the detector was designed for a germanium diode and you sub a silicon diode, you might find that the sensitivity is not as good.

dalien wrote:

Hi Gang

Thanks to all of you that posted replies either to the group or ersonally. Looks like a great do and I take notice of comments in respect of both weather and moving gear. I don't expect to be buying heavy stuff, especially as we are travelling to and from Australia by air and shipping would hardly be worth it. We will be travelling on to Washington, New York and Boston over the following 3 weeks - maybe there are more temptations at those places!

Look forward to meeting up with some of you there - those that are hams could try calling on 147.025 simplex (during the hamfest of course!), its our local club frequency that we use between members at hamfests. Don't have Collins gear otherwise would have been interested in the dinner. Maybe someone else will be staying near us at the Holiday Inn at Tipp City?

Regards

Simon

>filtering).
>
Only caution you should worry about when using larger values of capactence
is that you don't overstress the vacuum tube rectifier. They can only
take peaks about 5 times larger than continious rating. If you have a
really big cap, put about 30 ohms in series with it to limit the peak
charging current (I'm talking about the recharge on every peak of the
AC waveform out of the rectifier, not just the power up charge).

I guess it depends upon what you consider a steal. If you have access to electronic swap meets and are willing to look, maybe for a year or so, you will find one much cheaper, more like $50. I know; I bought one, and have seen others for sale. It would be like me offering my SW-3 for $1000. It a rare item in much more demand, but I probably would get some snappy responses. I agree much more on your opinion. It's a really nice GDO.

Mind you, if this was in '48, the reason is prolly much simpler than you'd
expect. This was the immediate post-war era when even such fundamental
things as clothing and meat were still rationed, in Britain.

So, I supppose they used the 6K8 for the simple reason that it was
available.

3869. Help: how to re-cap old receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-08 00:00:00 UTC
From: xxxtoneri@ils.net
Message-ID: <36e46178.21860@news.tor.sfl.net>
Source record: 88036

I have just picked up and old receiver, A National NC2-40D which has a loud hum. I replaced the power supply electrolytics and there is no AC ripple on the B+ now but the hum persists. The receiver receives quite well so I know that the RF and IF sections are OK. The receiver is full of the old paper capacitors used for bypassing and coupling and they are probably no good by now. Most of the capacitors are .1 mfd and what I would like to know is can I use new disc ceramic capacitors of say, .01 to .05 mfd as replacements or should I be using the same value of .1 mfd. Up here in Canada, .1mfd disc ceramics are $6.00 each and I don't want to spend a hundred bucks for new bypass caps. Can any of you experienced restorers enlighten me?

Thanks, Mike VE3FGU.

Mike,

$6.00CDN is outrageous for a .1 microfarad disc ceramic cap! TechAmerica has them listed on p. 22 of their catalog for $.31 in single quantities! Try giving them a call. Even with shipping to Canada, you should get by much cheaper.

Matt,

I am interested in R390 receivers , do you have any pictures.
If this one has already gone please keep me informed if you get anymore of these and any other tube era military SW receivers.
Thanks,
Simon Collinge - KF2HO ex G8DRR

I have the following tubes that I would like to get rid of. They are
all thyristors, most are untested because of high voltage applications:

1 Knuth 3C45
3 Westinghouse WL678
1 Electronic Inc C6J
1 Sylvania 6D4 NIB
1 RCA 2050
1 GE 2D21 NIB
7 various 2D21 tested, OK

Will consider interesting trades or reasonable offer. Thanks, Harvey

Where do you find replacement electrolytics for the big 500vcd
electrolytics that Heathkit used so many of in their transmitter power
supplies? Even the big 450vdc caps seem hard to find in the correct power
supply values.

Thanks for reading. I am in need of specs and a schematic for a Galaxy VFO, the one that works with a Galaxy III or V. What I want to do is use it with a Heath DX60B if it has the right output frequency range, and uses similar voltages to the Heath VFO. Anyone use this combo together, and can advise me what to do to connect them together? Any help will be greatly appreciated.

Source record: 88139

Greetings,

I have the following items for sale in the NYC area - I prefer not to ship:

1. Hallicrafters SX 62A- Gen coverage rcvr - good shape, have no manual
asking 200.00

2. Millen 90180?? Transmitter (hf/vhf) runs a single 829B in the final with
Xtal osc and matching modulator/supply - designed for rack mount. NEVER
PLUGGED IN...cosmetically in good shape though....no manual...make offer.

3. National NC 300 - for parts rig. Dial cord needs to be restrung, and doesnt
work, but believe its complete. Have partial manual. $50.00

4. Canadian Airforce model RA 2 gen coverage rcvr with 12vdc dynamotor. its
clean and have paperwork and shipping crate. $75.00

all prices are negotiable.

Bob

Source record: 88145

I just acquired an HT-41 amp over the weekend and have hooked it up to my Drake C line. It transmits fine, but no receive from my Drake. In researching the instructions, my conclusion is that I need an external relay to run this thing with my C line. I thought that the Vox voltage available in the power supply would work, but it doesnt appear to be doing so. Anybody hooked up an older amp like this to a transceiverized C line? I just would appreciate some feedback. Thanks

Mark

3896. FS: GE 4SR1A1 SSB slicer

Bob,
I would like to take SX62A.. All in good shape? All original knobs? 6V6 pp produces rich sounds, I think..
Are you flexible on your price?
I am in near Fort Lee, NJ.. Where are you located?
Please let me know..

I am in the process of restoring an Eddystone 830/4 receiver.

To complete the project I am in need of the following components:-

S meter, metal shield or cover for the main tuning capacitor assembly and the associated calibration unit.

If anyone has these components or a similar unit from a different Eddystone model please reply to csc@smartt.com

Colin

Has anyone tried reforming old electrolytics?
If so details please.
I used to do this a RAF Henlow in the 50s, but can't remember the details. I seem to think that it was just a higher that working voltage with a very large series current limiting resistor.
We had a box with a door on it which would take a dozen or so Capacitors at a time each with its own current limiting resistor. The box was necessary because occasionally a capacitor would blow up.
Removing that electrolyte from the innards of the box is no fun :(

> Also if I remove the 6141's what is the power out from just the radio
> before it reaches the finals?

The driver runs class A and doesnï¿½t provide any useful power, only a watt or two so keep the finals in. If you have the HP-23 power supply you can connect the HV-wire between the filter capacitors so you get half the plate voltage. Then feed the PA screen grids with a zener-regulated voltage of 100-150, taken from the same source as in the original circuit. You will need a lower grid bias to get an idling current of 60-80 mA. That will improve linearity, compared to 50 mA.
I used to feed the 6146 plates with 300 volts and the screens with about 100 volts (regulated), which gave about 10 watts output if I remember right.

> installing larger than the original capacitors?

Well, Gary, is instantaneous destruction shorter life?
Sizing of the electrolytics is fairly complex to do correctly. Add to that the improvement of the VT rectifiers over the years and you have some latitude in replacement values. There is some data given in the RCA manuals on maximum cap sizes recommended for various families of rectifiers and minimum circuit impedances to limit the peak currents. Remember that there is more to consider than cold starts where the tube warms up and charges the caps before or along with the draw from the load. But consider the case of a power interruption where the load draws down the B+ caps but a primary restoration re-applies the voltage to the rectifier while it is still hot and the average current to recharge is sky high and long duration with too large capacitors (pop!!).

Under "normal" operation, the peak current period is set by the capacitor voltage droop (a function of capacitance/load current) and a larger cap has less droop (lower hum) but that forces the charge time to be shorter and thus the peak current to be larger. This in turn increases the average losses in the rectifier (I^2xR) and this will hasten its demise.

An old 80 is a lot less durable than a new 80 which is a rebased 5Y3 with 'modern' emission materials on the filament, so somewhat larger capacitances are tolerable. One must also consider the losses in the power transformer due to higher peak currents causing excessive heating there, too.

Neil S.

>
>
> Gary7SLL

Ok - first a little theory - then a little practical stuff...
Electrolytics work by forming a chemical "barrier" between the plates... The thicker the barrier - the higher voltage that can be tolerated. This barrier is chemically formed through the usual process of a current passing through an electrolyte causing a solid to be deposited on the plate. An electrolyic capacitor left on a shelf for a very long time can have the barrier deteriorate - becoming thinner in spots - which can lead to arc-over and obvious failure of the device - if the barrier has in fact become thin enough to allow the applied voltage to "punch-through" one of those "thin spots".

Reforming is a process of starting with a low voltage (perhaps 10% of the rated voltage) applied to the capacitor with some manner of limiting resistance in series - and slowly increasing the voltage over a period of time - allowing the barrier to be "reformed".

A voltmeter or other indicator is connected to monitor the voltage across the resistance - which indicates how "well" the reforming process is going. Every so often (say once an hour or so) the voltage is raised slightly. The voltmeter should indicate a "slight" increase in current being drawn - which should taper off a bit as the capacitor reforms. With small increases in voltage - the amount of current increase should be very small. After an hour or so - if the current has dropped off some - another increase can be made (say another 10%). This process will give the capacitor time to reform the barrier before it must withstand the rated - (or whatever working) voltage is applied to it in use.

Many of us have simple capacitor testers or bridges - that have a leakage function that checks a capacitor at it's rated voltage. This voltage is usually set with a knob against a marked scale. These testers are also usually equiped with some sort of "leakage" indicator (current monitor) which in most cases is an "eye" tube like the kind used in radios as tuning indicators. By starting at a very low voltage and gradually increasing the "test" voltage over time - these devices are very good (and handy) for reforming electrolytics.

best regards...

Hello--

While the ECG replacement you mentioned may carry a 600-volt rating,
the 1N4001 is speced at 50 volts PIV.

Back in the early days of silicon rectifier diode production, low
yields of high-voltage diodes probably made it economical to sell
the low-voltage diodes (1N4001s and 1N4002s) at lower cost.

wrote:

>The ECH35 is said to be a true triode /hexode convertor, unlike the 6K8.

The ECH35 is a triode/heptode converter and it is the same as the
ECH33 and 6E8. This design has been maintained and it was used during
a long time in Europe, as in the very popular ECH81. In these tubes
the oscillator signal is injected in the 3rd grid of the heptode. The
grid of the triode is connected internally to this grid (ECH81
excepted). In the 6K8 the oscillator signal is injected to the 1st
grid which is connected internally to the grid of the triode. There is
no suppressor grid as with the ECH35. This design was not used
extensively at a later time. In USA, the heptode with ECO oscillator
converter was the prefered choice with tubes like 6SA7, 6BE6, 6L7,
6BA7. When high performance was required, a separate oscillator was
used.

The ECH35, ECH33, 6E8 can directly replace a pentagrid converter tube
6A8, giving a better high frequency performance and less pulling.

Note the difference in the tube construction. The 6K8 has a common
cathode. There is only one first grid around the cathode. It is the
grid of the triode as well as the first grid of the heptode. At the
one lateral side of the cathode, there is the anode of the triode. On
the other side, there are all the other electrodes of the heptode. In
the ECH.. types, the triode is at the one end of the common cathode,
the other electrodes of the heptode are around the remaining part (the
largest one) of the cathode.

>bought new, in the 60's, and he would like to get it back in
>operation. I would like to help him if I can.

Martin,

I can supply a photocopy of the original manual for the S-107, and maybe some other information (I'll have to see what I have in my S-107 folder). I also have a fairly complete "parts unit" in my stash that your friend can perhaps get repair parts from. Contact me directly by email and we can set something up.

My first shortwave set when I was a boy was an S-107. I have a picture of one (not mine, but they all look the same!) on my web page. I am currently fixing one up for nostalgia's sake.

> --- Brian, W4OLF
>
Actually, the 1N4001 has a PRV of 50volts. I just checked, and the ECG
replacement guide uses 1 diode as a subsitute for the lower half of the
1N400X sereis, and then a different diode for the upper half. They are
substituting a higher PRV diode for the low numbered ones.

But your point is good. The 1N400X sereis are all 1amp diodes, but
as the final number goes up, the PRV goes up.

Never had this happen. I always use series resistors to limit the
current going through the capacitor to a few milliamps at most, even
if a dead short arises.

Start out with a low voltage and you need to monitor the charging
current. Apply just enough voltage to get about 10 ma of charging
current. This current will decrease as the cap charges. When it has
decreased to 3 or 4 ma, increase the voltage again for about 10 ma of

current. Keep doing this until the working voltage is reached. If at any point the current does not come down to 5 ma or less after a 20-30 minute period, the capacitor should be considered defective.

Hi, All!
I have two National NC-173 receivers for sale. Really
hate to get rid of these, but finances force sale.
First receiver is in very nice shape, works fine, with just a few
minor scratches. Has original speaker and mint owners manual.
Second receiver is complete but does not receive. Very minor
damage to lower front panel. Will fix up nicely.
Will sell all for $250 plus shipping. Will not seperate.

Last call or will take to Ebay.

Folks,
I have found a method to set the passband tuning knob for the Drake 2-B fairly close to the correct point.
Rotate the passband tuning knob until the coil assembly in the tunning unit is extended as far as possible toward the rear of the chassis. The knob position for this is at 3 o'clock. Note: The passband tuning shaft operates a cam assembly and can rotate all the way around.
After the knob is set to the 3 o'clock position, fine tune the actual location by the instructions in the manual.

73,
Marc

>Thanks, Mike VE3FGU.
I do a fair number on Nationals down here in Florida, (3-4 a month)
and use modern 250V and 400V axial lead poly replacements from Mouser
or Digi-Key. about 1/4 the size of the papers now in the radio, and
with axial leads easy to dress in correctly. I buy quite a few, .1,
.01, and .047 usually 100 of each at a time. Avg. price runs about .25
each. Get a couple of 10uF at 100V while your at it for the audio
cathode circuits.... They fail a lot also.

3945. Re: Capacitor replacement

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-09 00:00:00 UTC
From: David Orlowski <daveo50@lni.net>
Message-ID: <7c2do2fha1@adonis.tdi.net>
Source record: 88063
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.shortwave,uk.radio.amateur

I have used a Heathkit IT-28 capacitor checker to reform older new stock capacitors. I have usually been successful in getting them to reform. I bring up the voltage with the selector switch while observing the leakage indicator which is the eye tube. Sometimes they can be reformed in about 30 minutes, other times it has taken a little longer.

After installing the capacitors in a radio they usually work fine.... for awhile. If the radio sits without being played for any length of time I've had them open up. I guess that I haven't had good enough luck with this to recommend it. I hate pulling the chassis out of a radio I have invested hours in restoring just to replace the filters again.

Regards,

Dave

Does anyone have a non-working Hickok 6000 or 6000a they would part with? I'm looking for one that could be useful for repairs.
Thanks,
Wayne Hall

I'd guess you could get much the same effect and with far less
screwdriver effort by powering the whole set through a Variac type of
variable autotransformer. Slowly wind up the voltage over a period
of many hours to allow the insulating surfaces on the electrolytic
capacitors/condensers to reform while the current and consequential
heating from disipation is minimal. If ever they get so hot that any
of the remaining moisture boils off, they will then have been
rendered irreparable.

For sets using valve rectifiers, perhaps build up a silicon
substitute inside the base of a discarded valve for this excercise,
but do monitor the B+/HT voltage to ensure that you don't
accidentally overshoot the specified final value on account of the
lower forward voltage drop across such solid state diodes.

I have the following Radio, and electronic equipment for sale. Will consider trades for Pentium computer EQ. All working last time tested unless noted. Shipping is extra.
Thanks

Tempo-1: Tube type Ham Transceive with Power Supply.Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

Lafayette: HB444/25A Looks and works great. This is an all tube 25 channel base unit with a nice chrome trim all around. would rate an 8 in looks. I think the mobil mounting bracket is also included, with nice heavy cast alum mic. $125

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

HW-32: 20 mtr single band xcvr ,mbl mounting bracket, and HW-13A mbl power supply with connecting power cord. Will also work with the Heath AC power supply. looks good works well on AC power have not tried it mobile, $125

Non Tube Items:

Marantz Model 2220B Stereophonic Receiver, with optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7 in appearance. Also have original manual, also in excellent condition. $350

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Swan Phone patch: with hook up cords. This unit looks real good, but is also untested. As is $35.

MFJ Antenna Tuners: Have 2. One is 941B and the other is 941C. Both rated a 300 Watts. $40 each.

Siltronix Model 90 VFO: Excellent condition with three position crystal switch. $75

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $200 for both.

Bearcat 250 Scanner: Have two. One working and one for parts. $75 for both.

Bearcat 210XL and 220 Scanner: One of each complete, but not working. $25 each.

Kenwood MC 50 Mic: Works OK and comes complete with cable and input jack. $50

3957. Nice, clean Tempo One for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-09 00:00:00 UTC
From: Tom KA4RKT <badger@telalink.net>
Message-ID: <2d9F2.436$sz1.1398647@news4.atl>
Source record: 88075
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.swap,rec.radio.swap

I recently ended up with a Tempo One in very good condition, but
it is surplus to my needs. After receiving the unit, I gave it a good
going over, and it is very clean, nearly in "out of the box" condition
(except for a few items, outlined below) The receive works well,
there is power out, and a clean signal, according to my IFR-1500.
Physically very clean but a bit of dust, has all original tubes, it
appears and comes with manual (tattered, but all there) and an
equally nice looking power supply and a hand mic. It also has
surprisingly little drift for a Tempo One, was able to copy 40
meter SSB without having to retune after a 15 minute warmup.
(Better than my old Swan 350!)

The caveat -- it was owned by a CB'er who changed the xtals out
in the 10 meter band segment, all 4 (5??) crystals. There are
NO OTHER mods to the unit, luckily, that I was able to find.
The next problem was it was delivered by UPS, who decided the
front of the radio would be a convenient part of the box to bang
against some hard object. The dial thusly has a mild wobble
and a bit of binding, and a small piece of the dial trim is missing.
This should be easy to fix, and I can do it if the buyer wishes
before I ship. With original tubes it could probably use a new
pair of outputs.

The price? Well, it is in good shape despite all this, there are no
dents, dings, or rust and has been well taken care of even though
it was used on (ugh!) 11 meters. Would make a decent/passable
first rig or backup rig, if the ten meter crystals are replaced
(Available via JAN crystal and others, I am told)

$150 shipped from Nashville, TN 37211 or best resonable offer.
Trades considered. No laughing please. :-)

As I recall, having recently sold my Galaxy V, the VFO runs in the
5.0 - 5.5 MHz range. That means it would have to be modified to
either 3.5 - 4.0 MHz or 7.0 - 7.5 MHz to work with a DX-60. Not
a real good idea, unless you're experienced at building VFO's.
I'd offer it up for sale (it shouldn't take long to sell a rare
item like that!) then buy a Heath HG-10B VFO (designed to work
with the DX-60 series transmitters).

Just stick a big current limiting resistor in series with the HV.
As the caps reform, the current goes down. If the current
doesn't go down then start poking around to find the cap that
is shorted or overly leaky.

Some older radios have a HT switch and one can leave this in the off
position and use a pair of clip leads to stick the series R
in place of the switch.

Source record: 88079
Cross-posted to: rec.radio.amateur.boatanchors,nj.forsale

I have a Lambda model LXS-E-15R regulated power supply. It's rated
19A continuous, 15V +/- 5%. Turned all the way down, it puts out
14.0 V and is perfect for powering Amateur gear (ie, 13.8V requirements) which
is what I've used it for. It also has remote sense terminals so that it
can regulate the voltage at the load, not at the source like most supples.
No fan -- LARGE heat sink for totally convective cooling. Also no on/off
switch; just plug it in and forget about it (which is exactly how I've been
using it for over a year).

Only reason I'm selling it is because I need a more portable unit, like a
light weight Astron switching supply.

$90 + shipping from Monmouth County NJ, or will consider trade.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic.

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

>

Yes, Claude, I can confirm what you've said. In the interests
of Science, I sacrificed a 6K8 [that had lost its top cap],
and ECH35 and also a Marconi X65 and opened them up for
detailed exmination.

The triode in the ECH35 seems *tiny* compared with the triode
part of the 6K8. Yet when I measured the cathode dimensions
[cylinder for ECH35 and plane rectangle for 6K8] and did
a calculation, the areas turn out to not very different
[6K8's triod has about 50% more area than the ECH35's].

X65 is generally similar to ECH35, though by no means a carbon
copy.

The 6K8's geometry means that g1 of the mixer part *has* to be
the local oscillator injection grid. But in the ECH35, the designers
had a CHOICE - and evidently chose to make g3 the local oscillator
injection grid and g1 the signal grid. So presumably they
decided that having g1 as signal grid was better in some way...
Any idea how it might be ther better choice?

6K8 was used very commonly in British radios around 1939, 1946-9
yet seems very seldom used in USA radios of the same period. I'm not
sure I have *ever* seen a 6K8 in a Merkan radio. Pentgrids like
the 6A8 were the norm in USA. I wonder why things were done one way
in the old world and the other way in the New.

Ive got a Galaxy 5 and the VFO seems to be a 5.0 to 5.5 version so you wouldn't be able to use it with a DX-60 which uses a fundamental freq and/or its harmonic for the ham bands.

although a lot of folks do this...I really don't much prefer this
approach. Primary reason is that you put the component's power-supply
transformer at risk; possibly other components as well.

My approach is to use an external variable DC power supply. Current
is limited through a 50K/10W resistor and monitored with a 0-2ma
millameter (the analog version is much easier to follow) and with
a voltmeter across at the cap. With this, I know exactly what is
going on in the reforming process.

Generally, I increase voltage to 0.5-1.0 milliamp and let it settle
down to near 0ma of leakage current before boosting the voltage
up again.

I have tremendous success with this method. One can build the supply
out of hamfest parts.

Cheers,
LK

Other than the parameters you stated, if the general coverage receiver has sufficient band-spread for the ham bands and appropriate selectivity, it should work just fine.

Olav,

You can use a communications receiver for ham contacts, as long as the sensitivity and selectivity, and to a lesser extent, the AGC performance, are adequate for the band conditions. BFO stability is sometimes an issue with shortwave receivers, which are mainly intended for a-m reception. For serious hamming, I'd go with an actual ham-bands receiver, or at least a high-end general coverage set such as a Kenwood R-5000, Icom R71, or similar.

By the way, I see that you are in Norway. I have an old Tandberg table radio which receives LW, MW, SW, and FM (European band which stops at 101 MHz). It's a beautifully constructed 6 tube set that has a red teak cabinet and requires an external speaker. I can't recall the model at this time (it's at home, and I'm at work). All of the markings are in Norse. Is Tandberg still in business? Do they sell parts and manuals for their older equipment?

73,
Dean / K5DH

3978. INFO: TV-7A Tube tester

Can someone tell me what the rating is for the meter on the TV-7? I've found that 100ua is too low and 1 ma is far too high. I've jury-rigged a 100ua and a multiplier resistor and it appears to work OK in that I can +/- and center-adjust the Line Adjust, but I'm uncertain of calibration. Thanks in advance.

>electrolytics that Heathkit used so many of in their transmitter power
>supplies? Even the big 450vdc caps seem hard to find in the correct power
>supply values.

If I can't find something in "Ye Old Junk Boxe," I get them from
surplus stores and/or surplus dealers. I must be on every surplus
dealers mailing list in the US.... Sometimes I have to buy 100 to get
the right price, but they get used, so that doesn't bother me.
When I rebuild existing cans, I use modern radial leaded types made
for switching power supplies.

Tube finals? Mine is solid state.

Anyhow , it is a paramilitary unit with probably the USG or other governments in mind. Mine is about 40 watts output, SSB. It's been awile since I've been in mine, but the channels have specific ranges and have to be aligned to frequency (RF stages for both the xmitter and receiver). Some have S-meters and some have a channel doubler that gives you twice the number of channels without adding extra RF boards (you just add additional xtals). Some apparently had remote control heads (mine has the connection for one but doesn not have the head).

Hope this isn''t too incoherent and is of some use. 73 John

Hi Walter-

Depends on what sort of test you want to make.

For an extremely detailed analysis of the tube's performance in a dynamic environment, a Tektronix Type 570 just can't be beat. It is a curve tracer that displays the curve families that you see in tube characteristics books. The bad news is that they only made about 1100 of them and that was 30+ years ago. Hard to find and expensive if you do.

For a more "yes/no" sort of test and for quickly and easily finding matched sets and stuff like that, a military TV-2 is hard to beat. It's got meters for everything.

For easy portability and quick operation, an old Hickok 600 or something similar is fine.

To just get a quick test of "has the emission gone south?", a basic emission checker would be fine and they are quite cheap when you see `em on the used equipment circuit. Radio Shack, Lafayette, B & K and lots of others made `em back in the 60s....

GL and 73

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic.

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Gary Peach wrote:

> I hope that I was not discourteous

No, not at all - no it was one of the people that likes to stir things on r.a.r+p... no big deal...

in an earlier post I commented:

> >So to answer the question - (or fill in the omitted data - remind me to
> tell the story some time about Omitted road)...
>
> Why not now Randy.

Ok.. not that long - Several years ago - all of the emergency service units in the county had championed a unified 911 system county wide. This was a good idea - so the appropriate steps were taken... funding - the phone company, post office, etc. were all involved. One of the problems here in rural Mississippi is that there were (believe it or not) still a few roads that had no official name - and some aren't even paved. As part of a county wide 911 system - all roads must have a name - and rural route box number xxx were all converted to standard uniform postal street addresses. The county engineers had the task of ensuring every street and road had a name - so they would canvass the neighbors on a street or road and they'd pick a name. In the old days - roads were more often than not named after the towns they connected - the Chunky -Duffy road - or the Meehan Savoy Road. Other roads were named for a well to do family they served - Like Dr. Brock road - or the function they served - like wire road (which even to this day has a major link of the Transcontinental Cable running along it - though now it's fiber-optic and buried - but they say in the old days to phone poles carried hundreds of wires). Any way - with all of this "naming" going on - people checked and rechecked - and street signs were made - it was a little strange - out in the middle of cow pastures - two dirt roads would meet - and there is a street sign on the corner proudly proclaiming the junction of Stucky River Bridge road and Bikers Alley (guess what kind of club was at the end of that dirt road!). Anyway - one day all these new signs were going up - when somebody noticed a strange sign out on Valley Road - Seems that this little road (that goes out to a riding stable) had been accidentally skipped during the naming cycle - and a notation was made on a map - so that somebody could go out there and get a proper name for it... only it was forgotten... and the sign makers - dutifully made the road's sign: Omitted Road - which is still there to this day!

Back to Gary's comments / questions

> What RANT?

well it doesn't much matter - but in r.a.r+p a tread was running about a Wega german made radio.. I and some others took exception to some comments about Steve Kelsay - who is probably one of this countries best experts on German radios.. Anyway - I sorta unloaded some pent-up frustrations...

> I wish that there were some lady
> contributors to this ng.
>

Actually there are some here in r.a.r+p - though they tend to be less verbose - My other half is pretty well known for her military / boat anchor collection and stuff - as well as her expertise in graphics and photo stuff - Sarah Wanamaker often lends her knowledge about transistor sets and so on... I agree though - it would be nice if there were more...

best regards...

I have 36 never out of the package 7586 Nuvistor tubes.
What am I bid for them ?

Regards
Reed

Hi,
My recommendation is Hickock 752A. It covers all the tubes including
newer sweep tubes.

Randy Guttery (comcents@mississippi.net) wrote:

: Ten minutes ago - I pulled the 950's operator's manual to see if it listed how
: much leakage current (in electrolytic leakage test) it took to "close the
: eye"... it doesn't give any values. But this paragraph caught my eye:

: "NOTE ON LEAKAGE TESTING OF ELECTROLYTIC CAPACITORS: Initial leakage current
: in an electrolytic capacitor is a function of shelf life; it does not show the
: condition of the capacitor. When making the leakage test, enough time must be
: allowed for the leakage current to reach the normal value. The instructions of
: the capacitor manufacturers are to measure the leakage current of the capacitor
: at the rated dc voltage, after the rated dc voltage has been applied to the
: capacitor for five minutes plus one minute for each month of shelf storage."

: So a capacitor made in 1979 should be reformed and then left at operating
: voltage for 20 (years) X 12 (minutes a year) = 240+5 minutes - some four hours
: before the leakage current is considered. And that's the suggestion of the
: people that MADE the things... Hmmm... wonder when I read that and "filed"
: it away? Let's see - I bought my 950 Kit at the Lafayette store in Honolulu in
: 1972. I'll bet I read it then!!! But then - info that old must surely be -
: obsolete...

I used to use a B.P.L. (British Physical Labs) Electrolytic Capacitor Bridge
half a lifetime ago. That was designed to test and reform capacitors at
voltages from 5 to 500Vdc and values of 1 to 10,000 uF. The reforming
function used an adjustable constant current source (using a Valve IIRC)
with three ranges, 0.5, 5.0 and 50ma FSD. It also had a voltage limit.

Buried in the manual was a formula for calculating the maximum current. I
cannot remember the formula, but ISTR that it was based on the value (C & V)
of the capacitor and limited the power dissapated within the device. For low
voltage high value capacitors the leakage current could be quite high (a few
mA at least) whilst the forming current could be > 10mA.

I doubt that the manual exists now - the instrument certainly doesn't - but
I'll have a look tomorrow.

To the original poster with his 8 + 16 uF capacitor, replace them with paper
capacitors!

Geoff

The TV-7 meter has a full-scale sensivity of 200 microamps and a resistance of 2360 ohms. I posted a note on how to replace the TV-7 meter with a Digital Panel Meter (DPM) on the rec.antiques.radio+phone newsgroup just a few days ago. You may want to check it out.

Best Regards,

Ed

Message-ID: <7c5l9g$3b9$1@plug.news.pipex.net>
Source record: 88113
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.shortwave,uk.radio.amateur

Thank you to all that responded to my query, you have made me think and scratch up some idea of what it was that we did.

Here is a Precise of the contributions

Neil deals with the effect of the reservoir capacitor upon the rectifier.
and adds
" One must also consider the losses in the power transformer due to higher peak currents causing excessive heating there, too."

Blowing the fuse at switch on may be a problem.
Fitting a slow blow fuse may reduce the MTBF of the fuse.
But what it will do for the rectifier I don't know.

Randy describes the chemical nature and mechanism of electrolytic capacitors.
He suggests that one should apply voltage through a series current limiting resistor. The Voltage across the capacitor is monitored. The applied voltage is gradually increased until the capacitor has its working voltage across its terminals.

This seems a good practice and is the basis of all other methods.
He does not say what he thinks is a safe maximum current to prevent explosion.

David never had an electrolytic blow up. Uses a series resistor to limit current to a few milliamps.

It would be interesting for comparison sake for David to tell us what is a few in this case. ;)
Presumably 10 mA is a few mA, but applied to a physically small capacitor may cause sufficient heating to cause a sudden evacuation of the guts of the capacitor.

Bill starts with low voltage at 10 ma, winds up again as the current drops to 4 mA
He uses what is basically a current method of reforming the capacitors. This should reform the capacitors more rapidly, but the risk of explosion is increased.

Presumably 10 mA would be a lot for a physically small capacitor.
Perhaps the provision of some cooling would make the process safer.

Dave uses a capacitor checker similar to a method mentioned by Randy

Tony uses a Variac to the whole set
This is a technique that I have heard of as a quick (and dirty?) fix

reforming all of the electrolytic capacitors in a long unused set. The problem is that capacitors are likely to blow. The conductive electrolyte stuck around the pins of a valve base or into the tags of a tag strip is almost impossible to remove and the set could be written off.

I take old sets out periodically and apply power for a few hours.
You don't need to listen to the set.
My Modern stuff NEVER gets switched off.
The thermal shock at switch on is the greatest contributor to component failure. The cost of electricity is nothing compared to the true cost and hassle of repairing a set.
-- The working life of my equipment is consequently extended. --

Bob uses a large series current limiting resistor.

No details, but presumably he agrees with the other posters.

LK external supply with 50k resistor limits current below 2 mA

Conclusions
Remove the capacitors from the set if they are particularly large to protect the set from electrolyte in case of explosion.
Smaller capacitors if the circuit permits may be reformed in situ, but some precaution to contain any electrolyte in case of explosion should be made.
The electrolyte is usually corrosive and will spoil metal chassis as well as wreck other components.

A simple method is to apply a voltage slightly in excess of the working voltage of the capacitor through a series resistor that will limit the current to a couple of mA.
If higher currents are used the reform time will be reduced, but the risk of explosion increased.

These resistor values will limit the current to 1.8 mA.

V Working	Series Resistor	Wattage
5 V	2,778 Ohm	0.51 W
10 V	5,556 Ohm	0.52 W
25 V	13,889 Ohm	0.55 W
30 V	16,667 Ohm	0.55 W
50 V	27,778 Ohm	0.59 W
100 V	55,556 Ohm	0.68 W
150 V	83,333 Ohm	0.77 W
200 V	111,111 Ohm	0.86 W
250 V	138,889 Ohm	0.95 W
300 V	166,667 Ohm	1.04 W
350 V	194,444 Ohm	1.13 W
400 V	222,222 Ohm	1.22 W
500 V	277,778 Ohm	1.40 W
750 V	416,667 Ohm	1.85 W
1,000 V	555,556 Ohm	2.30 W
1,250 V	694,444 Ohm	2.75 W
1,500 V	833,333 Ohm	3.20 W

2,000 V | 1,111,111 Ohm | 4.10 W

Obviously a selection of standard value resistors near the values from the table will be sufficient. Half a Watt has been added to all values, you may prefer more.
A fuse or thermal trip might be advisable for unattended operation.

This method could probably restore one of those old boat anchors that otherwise might remain idle for want of a happ'eth of tar.

Not much more than 2ma. Very conservative, yes, but at that level
I just set the power supply voltage, hook it up in series with the
resistor, and don't worry about leaving it on while I'm out for the
day or sleeping at night. If the cap doesn't reach rated voltage
after a few days, I declare it a lost cause and replace it.

I ignore it too. Perhaps there was a patent related reason, as usual.
Perhaps it is an old controversy about oscillator circuits: ECO vs.
Hartley or "reserved-feedback".

In his summary of responses Gary asked a question (or more accurately noted an omission):

Gary Peach wrote:

> Randy describes the chemical nature and mechanism of electrolytic
> capacitors.
> He suggests that one should apply voltage through a series current limiting
> resistor. The Voltage across the capacitor is monitored. The applied voltage
> is gradually increased until the capacitor has its working voltage across
> its terminals.
>
> This seems a good practice and is the basis of all other methods.
> He does not say what he thinks is a safe maximum current to prevent
> explosion.

I have no idea what the current is using this method - though I will find out. As noted I use a common capacitor tester (EICO 950) and use it's "Electrolytic leakage" test function as a current limited - monitored voltage source to power the reforming process. In that use I just advance the voltage control until the eye almost closes. When it has opened very nearly completely - I just crank it up until once again the eye nearly closes.

So to answer the question - (or fill in the omitted data - remind me to tell the story some time about Omitted road)... anyway - I just fired up the 950 - put the 260 in current mode and attached it to the +&- terminals... turn up the voltage until the shadow "just" closes - 3ma. So there is the "magic" number... I'm sure anything in the 2 - 5ma range (probably higher even) would be fine - that's just what the 950 supplies at "shadow closing".

Ok - one more "thing"... after my RANT last night - I got an email that was anonymous, and quite sarcastic. It accused me of being no smarter than anyone else here - and that I just "make stuff up - then claim legitimacy behind puffery of how many years experience, blah, blah". First I never claimed to be smarter than anyone... not a chance. More experience than some - but have never mentioned smarter. They took huge exception to Kitchen Table Amateur - (shoe musta fit - because I named no names)... BTW I got a lot of positive ("wish I'd said that" email)...

But let me address this "making stuff up"... (as I said last night- I'm bloody tired of apologizing for my history - don't like it - tough!) - A particular point was my contention that it takes hours - not minutes to reform an electrolytic that been on the self for many, many years. I didn't make this up... but to be honest I didn't remember where I got it... Must have been legitimate - else why would have stayed with it myself????

Ten minutes ago - I pulled the 950's operator's manual to see if it listed how much leakage current (in electrolytic leakage test) it took to "close the eye"... it doesn't give any values. But this paragraph caught my eye:

"NOTE ON LEAKAGE TESTING OF ELECTROLYTIC CAPACITORS: Initial leakage current in an electrolytic capacitor is a function of shelf life; it does not show the condition of the capacitor. When making the leakage test, enough time must be allowed for the leakage current to reach the normal value. The instructions of the capacitor manufacturers are to measure the leakage current of the capacitor at the rated dc voltage, after the rated dc voltage has been applied to the capacitor for five minutes plus one minute for each month of shelf storage."

So a capacitor made in 1979 should be reformed and then left at operating voltage for 20 (years) X 12 (minutes a year) = 240+5 minutes - some four hours before the leakage current is considered. And that's the suggestion of the people that MADE the things... Hmmm... wonder when I read that and "filed" it away? Let's see - I bought my 950 Kit at the Lafayette store in Honolulu in 1972. I'll bet I read it then!!! But then - info that old must surely be - obsolete...

>So there is the "magic" number...
>I'm sure anything in the 2 - 5ma range (probably higher even) would
>be fine - that's just what the 950 supplies at "shadow closing".

Thanks Randy that makes it more general and those of us that do not have the 950 can reproduce your results with home made equipment.

I wonder if this current is what you get for large and small capacitors alike. A physically large capacitor with loads of surface area can get rid of any heat generated but a little fellow might just go pop at the same sort of current.
>
>Ok - one more "thing"... after my RANT last night -

What RANT?

>I got an email that was anonymous, and quite sarcastic.

Thank God the delete key is clearly marked ;)

>It accused me of being no smarter than anyone else here

Well I'd take that as a complement.

>- and that I just "make stuff up -

In a long life I feel that I just made stuff up until I really turn it over in my mind and fish around for a linked occasion that reminds me of where it comes from. I know that I get myself into some hot water on here from time to time for saying things off the cuff things that have long since become part of my accepted belief from a long life crammed with experience. When some young shaver quite rightly wants me to justify my position I have to scratch around to find the first principles. Which is good for me and good for him and I hope useful for the lurkers too. Much of what I learned in my Yoof has been revised and a long period of serious illness has left me a bit out of touch on some things, but the strain/(I'm only kidding) of justifying myself here is bringing me up to date, Many thanks to all the contributors here for their help and patients. I'm sure that we can all do much better by co-operation than by confrontation no matter how much of an adrenaline rush some get from flame wars.

>then claim legitimacy behind puffery of how many years experience,
>blah, blah". First I never claimed to be smarter than anyone...
>not a chance. More experience than some - but have
>never mentioned smarter.

Well all I can say is suffer little children.

>They took huge exception to Kitchen Table Amateur -

Perhaps they have no experience of what can be achieved on a kitchen table. It's even more fun if the table has castors.

>(shoe musta fit - because I named no names)...
>BTW I got a lot of positive ("wish I'd said that" email)...

That at least is encouraging, you can add me to that list.
As indeed to anybody's list who is prepared to take part in discussion offering however much or little to the exchange.

>But let me address this "making stuff up"... (as I said last night- I'm
>bloody tired of apologizing for my history - don't like it - tough!)

Well you're not alone in that.
One of the problems on here is that it takes some months to establish your persona something that is sensed in the first few moments when you walk into the bar, club room, meet at a rally etc.
All I can suggest is persevere, I'm sure if any of us step out of line or start swinging the lamps there are enough old bull elephants to put that person courteously back into his/her place. I wish that there were some lady contributors to this ng.

> - A particular
>point was my contention that it takes hours - not minutes to reform an
>electrolytic that been on the self for many, many years.
> I didn't make this up... but to be honest I didn't remember where
> I got it... Must have been legitimate - else why would have stayed
> with it myself????

Well that seems to accord with my experience, so any descenter is a wind-up merchant. Not every thing that I say is necessarily true but I always own up. Sometimes I do post something a little off the mark, I have noticed that where a posting is absolutely perfect in every respect that it does not generate any discussion. But make one slip and every man and his dog come out of the wood work. That is good, that is what news groups are supposed to be about. Communication, I hope that we are not conducting a policy of negative reporting here. It may be efficient on crowded emergency channels but it is most unproductive for any one attempting some self training. I would like to think that the most novice person could post their first message here and receive a good reception. Sadly It is not quite like that yet. however if the majority of posters make it clear that they will not tolerate bad behaviour it should gradually improve.

>Ten minutes ago - I pulled the 950's operator's manual to see if it listed

I am still looking for the parts listed below, if you have them and are will to part with them please advise. Purchase or swap is ok.

JW Miller 2102 or 1462-BS 3 gang tuning capacitor
JW Miller 1709 100 Khz I.F. Transformers
JW Miller 1711 100 Khz BFO transformer
JW Miller 958 50mh RF choke
JW MIller 960 100mh RF choke
1 1/4 inch 5 pin plug in coil forms (I need 25 of these)
4-6 hy 100-150ma filter chokes (need 3)
5x7x2 steel chassis
10x14x3 sturdy aluminum chassis
7360 tube
pillar type single connection tie points (don't know what the correct name is HP and Tek used to use them in a lot of their equipment. The have a 6/32 stud at one end, a body 1/4 inc dia and about 3/8 heigh, with a single connection point to solder to.)

Thanks

Have a Collins question. Looking through an old CQ - (Nov 59 - p159) there is an ad from Lew Bonn Co. In it, it shows the standard KWM2 but it also shows a "SC-301 Antenna Control Console". It has a tymeter clock and what looks like a rotor control...
It mentions it in the Harvey Radio ad as well (p154) with a price as "TBA" as well as the standard Collins two page spread in front of the magazine.

Question is... was such an animal ever made?... and what was used for rotator ??

oh yea.. price for the "new" KWM2 was $1095... 1959 dollars of course !

4057. Hallicrafters SX-110 Dial Glass (Clean) needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-11 00:00:00 UTC
From: "David W. Fleming" <davefleming@novagate.com>
Message-ID: <7c7c5s$k2l$0@205.138.138.3>
Source record: 88010

Looking for anyone with a junker SX-110 that would like to sell the Dial Glass out of it, provided it is good cosmetically.
Or, better yet, someone who knows where a Replica or Silk screener can repair or re-make a new one for me.
Thanks!
davefleming@novagate.com

Mike,

I can copy the manual if you still need it. I will give you the parts
that should be changed in some way. I have one I have restored and aligned. It
works great. E-mail me at vincentelectronics@erols.com.

Well, Randy, like you say, they should know!!

However, they did tend to be conservative back then, too, so that would likely
be 'worst case'.

I use the technique of a high voltage bench supply connected to the capacitor
to be reformed. I run the voltage up until the current is a reasonable value
(see below) and allow the current to drop to about 10% then crank the voltage
up to give the initial current and wait again etc. I keep this up until the
voltage is the rated value of the cap or until the current doesn't fall away.
I find that, generally, a 'good' dry electrolytic cap will reform in less
than an hour regardless of how old it is. I have never had a good wet
electrolytic to try it on. If the current fails to drop at some voltage
setting, it usually never drops regardless of how long the current is left on
and the capacitor can be considered BAD.

In this discussion, the currents for forming have been bandied about with no real basis for the quoted numbers. I set the initial current such that the POWER DISSIPATION in the capacitor is small enough to prevent 'hot spots' in the capacitor roll reaching the boiling point. Naturally, as the forming voltage rises, the power dissipation for a given current rises, too (W=EI). On a typical size of antique radio main capacitor, I try to keep the dissipation under 2-3 watts (10mA up to 250V; 5mA to 450V). If one was reforming one of those small 10uF 450v electrolytics from AES, you would, naturally, need to keep the maximum dissipation down around 0.5W to prevent excess 'hot spot' temperatures, since the volume/surface area is so small.

According to Mallory, at some voltage around 550V a new effect occurs called 'scintillation' where the dielectric simply cannot withstand the stress. Presumably this is the reason a single capacitor cannot be made for greater than 450-500V. One wonders what the HV units offered by AES really are.

My $0.02 on the subject.

Neil S.

4074. Bounty for MOT info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-11 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <36E7E5F6.1436EF3A@erols.com>
Source record: 88027
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

My CAP wing has acquired an entire lot of MOT power transistors from a closing DOD repair facility and we need to identify them as to rating. They all look like similar packages to the MOT MRF-line, but these have only a MOT p/n, not the generic. We have about only 7 different style cases, but about 20 different part numbers. If someone can identify these for us (either MRF equivalent or power in/out, freq., and voltage), I'll personally pay that person a fee on behalf of CAP. What we do know is that they operated radios off 12 volts, were primarily on VHF and we believe that they were used on MOTRAC, MICOR, SYNTOR, etc. type radios. I'll give an example below of the kind of p/n's we have:

These look to be MRF316 or MRF (same case ID) The "M" numbers may be the clue:
M9741 947 8527 210
M9739 458-941 CS077
M1104 185 8612
M1107 185 8218
M9738 458 952 CN875
M1108 458 216 AQ558
M9850 458 017 AO330

This group all look the same:

M9636 185 719
M9689 526 170 500
M9622 185 8609

We've got about 5-6 more "groups, too! Any help???

Refreshing - common sense in a discussion!

nesesu@my-dejanews.com wrote (with regards to the manufacturer suggesting 1 minute / month of shelf storage):

> Well, Randy, like you say, they should know!!
>
> However, they did tend to be conservative back then, too, so that would likely
> be 'worst case'.

Yes - and two point must be stressed - the 950 has a "fixed" current supply of around 3 ma (under "eye monitor conditions) - and yes - quite likely -- that is a "safe current" for any capacitor one might hook to the unit. If I'm reforming a can - I just want to throw it on the 950 and forget it - except for increasing the voltage every-so-often - I don't have to worry with any calculations, etc. Since I bought about 600 multi-section cans (the last the local electronics distributor had) - I have caps that have date code all the way back into the 60s... so everyone gets an overnight stay at the rated voltage - once reached. (Obviously other club members get them from me for their projects - all except Hartley Peavy - he bought out an even bigger suppliers stock <g>).

> I use the technique of a high voltage bench supply connected to the capacitor

> I find that, generally, a 'good' dry electrolytic cap will reform in less
> than an hour regardless of how old it is.

Maybe true - I do give them a lot of time "at voltage" - and have never had one that passed that fail. I have had cans that looked ok when I went to bed - only to get up in the morning and find the eye slammed shut... Maybe one in 10 or so... and it's usually a three or four section can that does it - I don't remember a two section that once at voltage - didn't do alright... Have no idea why.

> I have never had a good wet
> electrolytic to try it on.

They reform the same way - just make sure they are full. if not - the area of the plates not covered by electrolyte won't reform - and if the radio is on - and gets bumped hard or tilted (enough so the electryte "sloshes") they can short hard.

> If the current fails to drop at some voltage
> setting, it usually never drops regardless of how long the current is left on
> and the capacitor can be considered BAD.

absolutely. If at any point in "bringing up the voltage" they don't make it - trash it. I think the only minor difference in technique here is allowing the capacitor time (without ripple, etc.) at rate voltage. It's my thinking in light of the manufacturer's suggestion that this "running time" at rated voltage is to insure an even and plenty thick plating. Point being - if you quickly run the voltage up just until the initial reforming is done - then install the capacitor in a radio - they are seldom run at their rated voltage. All capacitor's so operated will eventually have the barrier "degenerate" to the thickness plated by that "potential" - but I think I'd rather have the initial thickness evenly coated - "thinned down" to the operating "equalibrium" rather than depend on the average operating DC with ripple on it - to "finish evening out" the barrier... In practice - a good cap (reasonably well reformed for even a short period of time) will probably do just fine anyway. I do tend to be a bit conservative in such things. And I ALWAYS have something else to do - so it not like it's slowing me down or anything <g>...

> In this discussion, the currents for forming have been bandied about with no

> temperatures, since the volume/surface area is so small.

Sure - as noted - the 950 is probably "generic safe" - i.e. setup to do no harm almost no matter what one hooks to it... So yes - a little common sense could / would undoubtedly speed things up quite a bit without causing any harm to the subject cap. It's jsut a matter if you're in a hurry and like doing the math - or lazy like me. I guess a chart setup in Excel one time would probably do the trick - and have tables of charging rates by capacity for various types and sizes of cap. Then one could just glance at the chart - and have the optimum info at hand...

>
>
> According to Mallory, at some voltage around 550V a new effect occurs called
> 'scintillation' where the dielectric simply cannot withstand the stress.

First of all - scintillation is just a fancy word for sparks (or sparkling). I think with "traditional" electrolytes in use 550V is the limit - the barrier just doesn't get any "thicker" above 500V - and by the time you get to 550V or so - the barrier starts allowing little tracer arcs (scintillation) to penetrate. There is another factor as well - the increased leakage at these levels causes gas to be formed at the plates - hydrogen on one side- and oxygen on the other. Problem is - most barrier material isn't totally gas tight - so you get little "pockets" of a mixture of the two. Let one of the little "scintillation sparks" hit that gas - and you have a miniature explosion. The smaller ones just "pock mark" the plates - the bigger ones - turn the can into a motar launcher - and you know what a mess that makes (as the can "neatly" pukes it's contents).

> Presumably this is the reason a single capacitor cannot be made for greater
> than 450-500V.

Oh they can... using a modified formulation for the electrolyte... But that's why 550 and 600 volt rated caps are roughly twice the size of their 500V counterparts - the electrolyte, etc. isn't as efficient in these oversize versions.

> One wonders what the HV units offered by AES really are.

I think they're just the HV version units. I haven't looked in the AES catalog - but if they do give the size - you'll find they are huge - like a 20mfd 600V will be roughly twice the size of a 20mfd. 500V... (and a heck of a lot more expensive)...

>
>
> My $0.02 on the subject.

good thoughts...

best regards...

For Sale: Heathkit DX-100B AM/CW 160-10 Meter Transmitter..
It is in very good condition both physically and electrically..
It is one of the finest sounding AM transmitters on the bands
today.. Comes with a copy of the manual, has some mods to
improve the audio quality.. The information of the mods comes
with the unit.. It is unlikely that you will find a better unit
than this one at any price.. I prefer pickup only here in
southern California... Price is $200.00

Source record: 87837

Correct!

But first make sure you CAL is rite on... connect a jumper from PL-259 on your Cyggy and place nearby a Shortwave RX tuned to WWV. Use a NON-metallic screw drive and adjust cap trimmer next to the tall Cal Xtal. Zero beat the sucker.. now your CAL is Cal-led.

Next - tune the dial to 28.4 Megacycles. You will notice that 21.1 - 14.1 and 7.1 are nearby.

Turn the CAL and find it.

The 10 M adj is a hole on the very right side of the VFO box (Front of radio facing you)

Now taking a NON-metallic coil adjust tool SLOWLY turn left 1/4 turn and then right a 1/4 turn.. you should see the sig go up and down in freq. SLOWLY turn so that the CAL sig is on 28.4. NOTE: this coil can shift the signal pretty far is if your not careful you could actually be on 28,3 or 28.5! So do it SLOWLY.

When you got it turn the dial through the band and you should see it stop pretty near each 100Kc tick mark on the dial. It won't be exact but close enough...

You can adjust the other bands the same way.. but using (right to left) vfo holes for 15-20-40-80.

Good luck!

There are a couple things you can do.
Most of these cabinets use screws which are an analog of a self-tapping sheet metal screw. If you screw them down to hard they crack the brittle plastic.

1. You can heat up a 4-40 or 6-32 nut (helps to have a gas stove) holding it (pliers please!) by the attached corresponding screw, and push it while hot into place. The use the corresponding screw (instead of those quasi sheet metal screws). You should reinforce the foot with epoxy resin before you do this.

2.There are 4-40 and 6-32 nuts which have "grippies" for want of a better term, on their sides. These can be heated or epoxied into place,

3. You can fill the hole with epoxy resin and then re-tap the hole. A set of taps and dies are available from sears for about $8.

I've had to repair a these "feet" in darkroom equipment. I like the last solution best.

It might be difficult to buy "new" these days in the US. Those plugs
are non-UL approved, and as such, would incur liability for a commercial
vendor. Your best place to find one was probably here!!

From: BOB DUCKWORTH <bob@ns.atl.org>
Message-ID: <36E9637B.30D2@ns.atl.org>
Source record: 87851

Anyone got a few good 1S5 tubes in the Junkbox?

I'll swap a copy of an article for a little battery
regen SW RX that uses a pair plus a ceramic
socket for the 1st stage tube plus a pair of
small variable caps that may be close enough to use
for tuning and BS. Caps do not have bearings but
hey, a little conductive grease and the BS
made small enough and it will be workable.

These are 1V low current and are supposed to run nicely
on a D cell for A and 4 or 5 x 9V batteries, stacked, for the B

-bob

4096. Thanks for NC2-40 help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-12 00:00:00 UTC
From: xxxtoneri@ils.net

Source record: 87852

I just wanted to say thanks to all who replied with help on re-capping the NC2-40D that I rescued from being stripped for parts. I have now re-capped the radio and all it need is to re-align the dial calibration on a couple of bands. This radio looks almost like new again and sounds just as good. Even the 14 - 30 mhz band is quite sensitive and I was able to compare signals on 10 meteres AM with my NC303 and FT767. It hears almost as well but the adio is so much better. I think I will hang on to this receiver for a while. Sorry guys, but now I know why everyone wants a NC2-40D.

Following up my own posting :

I found the manual today and found the formulae :

I = C*V*3*10^-4

Needless to say, the manual does not give units but ISTR the mA, uF & V gave
the right sort of answers.

Geoff Blake (geoff@nospam.demon.co.uk) wrote:

[snip]

: Buried in the manual was a formula for calculating the maximum current. I
: cannot remember the formula, but ISTR that it was based on the value (C & V)
: of the capacitor and limited the power dissapated within the device. For low
: voltage high value capacitors the leakage current could be quite high (a few
: mA at least) whilst the forming current could be > 10mA.

: I doubt that the manual exists now - the instrument certainly doesn't - but
: I'll have a look tomorrow.

HI Bis the SC-101 was the station console for the "Gold Dust twins" which is the 75A-4 receiver and the KWS-1 transmitter. They were called the Gold Dust Twins because in the '50's you would have needed a bag of gold dust to buy them. The 75A-4 was around $495.00 and the KWS-1 was $1995.00. Definetly alot of money in those days and still no small change today. There were approximately 1600 KWS-1's built and around 5000 =/- of the 75A-4's. Today a 75A-4 will bring $800.00 +/- and a KWS-1 $1600.00 +/-. The SC-101 was $695.00 new. I have not seen a complete SC-101 for sale lately. There is part of one the antenna selector box on e-bay currently and the last time I looked it was up to $750.00. So if you ever find a stash of SC-101's you could become rich. :) :). Hope this answers your question. Buy the way The Collins Collectors Association is an organization of 900+ people interested in the preservation of Collins equipment and Art Collins legacy. Their web page is www.collinsradio.org. You might give it a look lots of interesting stuff. They also have a Sunday net on 14.263 at 2000Z and on Tuesday night 3805 at 08:00PM CST Thursday night 3875 at 08:00PM CST and a Friday WEst Coast net 3895 at 10:00PM CST. Lots of good info on all the nets. Hope that helps. Larry WA9VRH

Price reduction.......Must sell
I have a beautifully built Sailor HF AMP. This one has two RCA 8122
ceramics tetrodes which checked out full output. 1.8MHz to 30MHz
All the tuning is motorized and the band settings are preset manually
Built under high standards, rackmount, very high quality
components including a large cooling fan. It was removed and fully
functional from a cruise ship that went to solid state. This amp puts
out about 800watts with very little input. It has a built on solid
state pre-driver stage which can be bypassed if need to. It's complete
and in excellent condition. It requires a power supply
No manual but can be found at marine electronics shops.
Sailor is still the leader in Marine and satelitte communication
networks. I will send jpgs by request to anyone interested. I want
$350+shipped for it. The tubes alone cost that! Roughly 45 lbs
73 Chris VE3NGW/W4 Florida

From: Harry lythall <a@sm0vpo.8m.com.spam>
Message-ID: <36E90185.DDC0A5E9@sm0vpo.8m.com.spam>
Source record: 87971

Hello again everyone,

I recently hinted that my homepage was a "paradise for homebrewers" and I have had some response. One frequent comment was "... I never knew it was there ...". It is here:

http://sm0vpo.8m.com/ (still under construction)
http://www.geocities.com/SiliconValley/3569/
http://hem2.passagen.se/sm0vpo.
http://members.xoom.com/sm0vpo.

A year ago I became fed up with following links to pages with links. At one point I counted over 400 links and probably only 50 practical projects. Well I refuse to add "courtesy links" so my page is full of practical projects and information. The index page is little more than a list of projects. No membership fees! One click gets you straight to the project you want to see!

Also a member of the BOATANCHORS

Nearly all the projects have been built by myself too! Many prototypes that have survived the years have been photographed and all my new projects are photographed. Where relevant I try to include PCB foil patterns. You will NOT find frames and 500K-bytes pictures. I try to keep pictures to less than 10K-bytes and most of the circuits are less than 5K-bytes in length. Amongst my projects you will find:

CONSTRUCTIONAL KITS (NOT the main point of the pages)
FM Wireless Mic (most popular - without coil winding too!)
TDA7000 FM Receiver (also without any coil winding)
1000 common resistors (well - they are cheap here in sweden!)

BASIC INFORMATION
Biasing transistors - just a little information
Components numbering/values used in my pages (EU standards)
Reccomended Tools for homebrew work
Basic soldering thoughts for newcommers
VHF FM Wireless microphone simple radio project
Basics of valves (tubes). How to start building
How to use a basic Oscilloscope
Charging batteries

BASIC BUILDING BLOCKS
Pre-amplifiers including some RF
AF power amplifiers from 800mW to 100W.
IF amplifiers for AM, CW, SSB and FM
Some mixer circuits for AF and RF

Oscillator circuits. Sine, Square and RF
Simple regulator circuits for regulating DC power

ANTENNAS
VHF Test Antenna for CADF or Workbench
VHF antenna with 6dB gain
Basic dipole antennas
RF Baluns for matching/isolating antennas
A short HF antenna
A balcony HF antennA for city dwellers.
An 80 meter frame balcony antenna
SM0VPO HF packing crate antenna, easily hidden
Remote antenna tuner for frame (and the crate) antennas
A VHF Direction antenna with deep notch
Remote powered antenna pre-amplifier

RECEIVERS
TDA7000 VHF FM RX almost as simple as the TX
A cavity TX monitor/receiver (50MHz - 1500MHz)
Two 1930s style regenerative receivers
A general coverage valve receiver
Cigar Box receiver
An Integrated Circuit HF receiver
An HF (15khZ UPWARDS) DC receiver
One transistor hf regen receiver
Receivers for HF and VHF USING ZN414
Modify a cheap MW radio for 1.8MHz CW/SSB
Modify a cheap MW to cover any HF band
A synthesized receiver for the HF bands

TRANSMITTERS
VHF FM Wireless Microphone (BUG).
VHF FM Wireless Mic (higher power version)
250mW HF bands CW TX + 4 watt PA
5-Watt HF bands CW transmitter uses 7404
LM317 LF HF bands transmitter idea
One valve CW transmitter (Battery)
Two Valve CW transmitter (Mains)
Cigar-box transmitter Dont 'knock' valves
A simple VHF FM 2-metre transmitter
QRP SSB HF transmitter.
A wide B/W 3 watt QRP HF linear amplifier
A phasing method SSB exciter
10W HF Power Amplifier
500W linear HF amplifier
2000 watt joke transmitter (spark gap)

USEFULL CIRCUITS
CMOS AF/RF Synthesizer (37Hz - 4MHz)
Proportional Radio Control of models
The simple Power Supply Unit

A Bench PSU (0-15v 0-3A)
G8TGL RTTY Teleprinter Terminal Unit
10.7MHz (455KHz) TTL FM demodulator
CW Practice/transmission monitor
An SSB filter for old HF rigs
Getting +250vDC and 6.3.AC for valve gear
Grid Dip Oscillator circuit and how to use it
Modifying an SWR bridge to read true power
Use your sense of stereo image to enhance CW
Simple CW filters for homebrew QRP receivers
A self-tuning AF filter for CW
A Q-multiplier improved IF response
A simple CW keyer for paddle keys

DATA / INFORMATION
Coil formers used in my projects
QRP frequencies in the HF bands
Measuring QRP RF low powers
Calculate the number of turns on a coil
Making your own PCB's - my way (cheap!)
Photo Etching PCB's for quantity production
Circuits database (PMS) on packet
Re-using IF cans
Low value "Gimmick" capacitors
Estimating heatsink size

4135. WTB: Need manuals for Collins 651S1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-12 00:00:00 UTC
From: chris@pooh.cc.ucf.edu
Message-ID: <7cb93lfai1@news.cc.ucf.edu>
Source record: 87974
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I am looking for the service and owners manuals for a Collins 651S1
receiver. Will pay duplicating costs, if necessary.

Please reply by email.

Thanks

Chris

Well said, Randy. As usual I tend to generalize on what I do, and I failed say that I continue to form after the current drops down at full voltage (see below). Because I will not leave power on at my work bench when I am not there, I find my technique more convenient, but by no means the only way or even the proper way. For us hobbysts(sp?) it really comes down to what works with what equipment we have on hand, doesn't it?

>

As do I (see below); I was just indicating that the gross reforming seems to
be complete in the first hour regardless of age. One can reasonably expect
that the 'deforming' will diminish with time as the dielectric is eroded
away, so the 'minute a month' would be quite valid for the first few years
and then shorten as the age streched out. I rather doubt they expected people
to be reforming NIB capacitors that were 50+ years on the shelf <G>.

> and have never had one

I really don't worry too much about the 'optimum' current, I just keep the
dissipation under control, roughly. I agree that your 950 tester should be
'intrinsically safe'(at least for caps of the time it was built) and will do
the job nicely. At my test bench, everything is shut off when I am not there,
so overnight reforming is non starter. However I do the step up reforming when
I first start a session at the bench and leave it on for the whole time I am
there, even the next session too if I think it needs it. While the forming

current drops away down, usually within an hour or so, I do keep the voltage applied for many hours afterward, as you do, to ensure complete reforming.

4137. FS: Radios, parts & accessories

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-12 00:00:00 UTC
From: sabbatai_zvi@hotmail.com
Message-ID: <36e8fc2a.1073646@news.earthlink.net>
Source record: 87976
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap

For sale - add shipping:

EICO 753 transceiver for 80, 40 and 20m SSB, AM, CW. Excellent
appearance.
Includes EICO 752 AC power supply for 120 V AC operation, all
opriginal manuals etc. Needs two 7199 tubes available for $9.00 each
and a small replacement speaker for the power supply to get it on the
air. $150.00

Heath DX-60 with HG-10B with manuals - excellent shape. 90 Watts CW
and 60
Watts AM on 80, 40, 20, 15 and 10m. A few nicks on top cover of DX 60.
Front panel is very good. VFO looks like new. With all cables etc.
Will sell for $175.00 or best offer.

Small HF Transmitter with 6146 final and Internal Revenue 5735 kHz
crystal, with four small Thordarson transformers, apparently using
Screen
modulation. Missing outer case, but chassis intact and looks to be in
good
shape. Plug-in coil final and has antenna relay, typical RFCs etc. No
manual, untested
Will sell for only $20.00 as a parts / historical rig.

Lafayette 99-2503 Grid Dip Meter - brand new in box and unused!
All original. Great little GDO, with all coils, case etc. $40.00

DRAKE TV-1000-LP Low Pass Filter 30 MHz 1000 Watts $27.00

B&W T-R Switch, 110V AC using 6AU6 tube and SO-239 connectors. Will
sell for $40.00

2 posn. antenna switch with SO-239 connectors $15.00

Wall transformer, 120V AC to 14 V DC 500 mA - $6.00

Yaesu FT-840 HF transceiver. Includes original manual and microphone,
DC cable etc. VLF through 30 MHz with 100 Memories. SSB, AM, CW, RTTY
etc. 100 Watts output. Has two additional filters worth $120 each,
for wide AM and narrow CW. The 6kHz AM filter is essential for
listening to Shortwave broadcasts, hams on AM etc. All band tranmsmit
enabled. In mint condition.
Will sell for $600.00

National TMK-50 Variable capacitor New In Box $15.00

Plate variable transmitting capacitors:
50 pF 800V Hammarlund 1.5" deep, 1/4" shaft, clean used $5.00
140 pF 1000V 1.5" deep 1/4" shaft New, unused $8.00
200 pF 1000V 3" deep 1/4" shaft clean used $6.00
250 pF 1000V 2" deep 1/4" shaft clean used $7.00
400 pF 800V Brass plate variable KS-8221, 3" deep used clean $5.00

250 pF 2500 V transmitting capacitor 154-9 by E.F. Johnson
1/4" shaft measures 2" X 2" X 6" Brand New $20.00

Loading Capacitor - 5 Section, each 400 pF for a total of 2000 pF.
Great for transmitter or linear amplifier. 3" X 2.5" X 6.0" deep.
3/8 diameter shaft. Brand new and unused. $18.00

Loading Capacitor - 2 section, each 500 pF. With 3/8 in. diameter
shaft $5.00

Modulation Transformer UTC Model S21 unused, classic. $50.00

Collins 20 Watt Modulation Transformer, unused classic. $40.00

Thordarson transformer - THORDARSON D161916
power transformer 120 V AC primary potted, square - has two
secondaries:
Sec 1: 5.78 H, C.T. 48 ohms - gives 700V c.t. at 250 mA (24 + 24 ohms
DC)
Sec 2: 23.6 H, 605 ohms - gives 1580V at 20 mA (605 ohms DC)
Approximately 4.5" X 4.5" x 4" Good for about a 180-200 Watt plate
supply.
Will sell for $20.00

UTC choke Model PA104 $15.00
This Inductor is a 18 Henry job with a tap at 14.4 Henries.
99 ohms series resistance It's large - like 5" X 5" x 4"
Good for a choke input filter on a nice sized 200 Watt plate supply.
Will sell for $20.00

Fujitsu Color Printer Model DX-2300, Low miles(!)
This is a dot matrix prinbter, but made very well, and in excellent
condition. Uses tractor feed or single sheet plain paper.
With manual - only $25.00

Books:

1981 ARRL Handbook, excellent condition ONLY $8.00

Television For Radiomen, by Ed Noll. 340 pages, illustrated
1962. Front cover torn a little but otherwise very good $3.00

TV SICK? Service your own TV, by Belmont TV Co.
33 pages, plus sale flyer, 1975 MINT $2.00

METHODS OF TEACHING SHOP AND TECHNICAL SUBJECTS by Leighbody & Kidd
College text, 201 pages, excellent condition $3.00

All four books for $13.00

COMING SOON: More Parts for the Glowbug Homebrewer!!

Cabinet to build a large amplifier.
I will sale all parts for $2,000.00 plus shipping.

4141. Plastic Cabinet Repair Question...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-12 00:00:00 UTC
From: cking4@ford.com
Message-ID: <7cbf01$eh32@eccws1.dearborn.ford.com>
Source record: 87980

May not be 100% germane to boatanchors, but couldn't think
of a better spot to ask:

On portable radios and other pieces of electronic equipment
with plastic cabinets, frequently the cabinet is in the form
of two halves, and there are "posts" on one of the halves that
line up with holes on the other, and self-tapping screws are
used to cut threads int othe posts to hold everything together.
Sometimes the "threads" get stripped; mabye we turned the
screw a little bit too much in an effort to tighten it, or the
insides of the posts simply wear out from repeated disassembly
and assembly of the cabinet.

Anyone know of a good fix for this, that sort of "rebuilds"
those internal threads in the posts, such that the screw can
still be taken out if necessary (i.e. not permanently bonding
things in place)...?

C.K.

Funnily enough, I saw something similar at an antique supermarket near Lancaster, England, about a month ago.

I was suspicious, because the kind of valve it contained seemed far too young; unless the Tesla trade mark was running far more recently than I knew.

Also that sort of market is notorious for recently made antiques.

I hope you have been more succesful. I'd be grateful to know WHEN the Tesla trade mark was last officially used.

Source record: 87869

For sale late Drake C Line: R-4C receiver, 4-NB noise blanker, 500 Hz CW filter, 25000 plus serial number, cosmetics excellent, original paint very good, perfect front panel, everything works, but could use an alignment; T-4XC transmitter, SN 27000 plus, very nice cosmetics, perfect front panel, cabinet has been repainted(nice job), needs ceremic plate choke (L2) replaced in final amp cage(cost only a few dollars), comes with two brand new in the box Philips 6JB6 final tubes: also AC-4 power supply; MS-4 speaker(cabinet needs repainted); cables, original manual for T-4XC/no manual for R-4C. These units show very little use. With a little work they could make an exceptional late C Line. Most of the tubes in both the receiver and transmitter are the original ones dated coded 1976.Price is $475 for all plus shipping.Charlie, K5MBX

Bob--I have some NOS 1S5 tubes here. I'll take you up on the trade. I have made a few single-tube regen radios using 1U4s. The battery life is quite good, and I have used salvaged "B" batteries from geiger counters that I repair and calibrate. Let me know if you want one of these batteries instead of a stack of 9-volts. e-mail KB8UHU@aol.com. Thanks!

Hi Terry
I've got two Valiant cabinets sitting here, and you're welcome to one of them for shipping costs, or pickup in southern NJ. Either one will need new paint, but pretty sure they're not dented up.
I may have the xtal cover from one, but I'd have to find it first. Who knows though, maybe I could auction it off on Ebay, and help put the kids through college <VBG> !

Source record: 87891

Hi all,

I am listing this for a friend but I have seen it and this is a great Yaesu station. All pieces are at least 9/10 condition and all the cables and manuals are there along with the hand mic. Every part is also 100% operational-a rare find.

FT-901DM Tranceiver
FV-901DM Remote VFO
YO-901 Monitor scope
SP-901P Speaker/Phone patch
FC-901 500W Antenna tuner

I'll spare the details, its all there and its all nice. He is asking 1200.00 for the complete station pickup in Chicago, IL. He would also be willing to trade for a clean FT-990AC with the latest 1.3 ROM. If interested reply to this e-mail address: kpevin@mediaone.net I can take pictures with a digital camera if interested.

I have the following boatanchor equipment for sale:

(1) Drake R4B and MS4. Receiver works fine, very good physical condition. MS4 has small area on face that needs repainting (about 1" x 1/8"). Includes original manual. Make an offer.

(2) National NCX-200 5 band SSB/CW tranceiver with matching power supply/speaker. Receiver works, not getting much output from transmitter. Excellent physical condition except for small ding on top of power supply. Includes original manuals. Make an offer.

(3) Hammarlund HQ-110 ham band receiver with clock. Works fine. Good physical condition. Clock face has darkened, but otherwise very good. Make an offer.

73,

Marv

Hi Gang,
Don't need two, so I'm offering one for sale.

The one I'm selling has a virtually flawless front panel (but needs
to be cleaned), all original knobs. It is in working condition,
tubes test good, but eye tubes are dim. The case doesn't have any dents,
original paint with some scratches, and two small holes drilled
on the top, probably for a nametag. It has the original hefty handles.

I'd like to get $150/b.o. plus shipping.

Steve
p.s.-the model number on the paper tag on the rear of the chassis
is type 162-C

I offer to consider buying if you will put a price on them,
or I would happily compete at auction.

I have a friend who is desperately looking for a 117XC power supply.
Would you consider selling it alone?

>Can anyone tell me what the brown, bubbly-looking compound
>used for sticking the bakelite bases of older tubes is?
>And is there some way to make it turn loose without
>breaking the glass?

Don't know what the material is, David, but the glass is easily separated from the base by merely plugging the tube in a dark, out of the way tube socket way back in a dark corner of a transmitter or receiver, followed by an attempt to pull it out again. It helps if the equipment has lots of other radios stacked on top and you are on your hands and knees, reaching around the back of the cabinet and can't see the socket. It also helps if the radio has been on for a while, and everything is hot, with real potential for a shock from some exposed component that shouldn't have any voltage on it (but still does).

Also of help is if while you are attempting to install/remove same, if the telephone begins to ring and/or and someone in the house is calling you and you know it is a request to take out the garbage, mow the lawn, or clean the pool.

If you have any difficulty, merely borrow a friend's favorite radio. Choose any tube. The base will separate every time, the first time, even with the gentlest treatment.

HO HO! Very funny - and unfortunately, very TRUE! The same
instructions apply to the plate caps - which are secured with the same
stuff - even more fun, since there's usually some *serious* voltages
available in those areas...

Gary - KJ6Q

If you can't find them here on the internet, try your local music store
for the Russian made Sovtek or Chinese made Ruby 6550's which are still
manufactured and imported for vintage guitar amplifiers..

Message-ID: <19990314090808.00106.00000469@ng133.aol.com>
Source record: 87788

I agree. I wanted an SS-IBS since I was a kid and saw it in Popular Electronics. Finally heard of one on a Traders net a few years ago - 60 bucks, the guy had parted it out to fix an SS1R - which he sold for about 300 and I didn't have the sense to buy. Had to find a gear for the vfo, tons of xtals, etc. but got it going last year. Its way cool.

Only problem is I live 1.5 miles from a 50 kw AM station on 1000 kcs., which is the IF frequency. I sure wouldn't recommend one if you need to use it in any proximity to such an animal.

Good Hunting, its worth the search. Scott

Hello Fellow Collins Aficionados,

Excess S-Line Equipment and 75A-4 with 270G-2 For Sale:

Wanted to offer this for sale to the list (before I throw it on eBay).

Winged Emblem: 32S-3, 516F-2, 75S-3, 312B-4, 30L-1(good repaint) with four spare RCA, new old stock 811A's for the 30L-1, all working 100% CCA Excellent.

32S-1 (needs alignment), also CCA excellent

Original manual for 32S-3, copies of 75S-3, 32S-1, PJ-068 mic plug!

75A4 with spinner knob, 3 filters, 2 of them original (one of them is an 8kc modified from a 390 and it sounds great)! CCA excellent; works great too. 270G-2 needs to be repainted and reflocked.

Invested $3,800 in the lot with tubes, TLC, etc. Best offer close to that please. All original except as noted. Prefer to sell it all at once to one guy with a big truck and prefer pickup in Pittsburgh. If I can't sell it here on the list, I'll throw it on the auction block next week.

Will trade for a nice motorcycle or 60's or 70's muscle car. Cash is okay too.

Thanks Guys,

Brian K3VR (email me direct at n3xbu@aol.com with questions)

Hi, Brian. I'm a little confused. You want to sell it as a lot, and have priced it as such. However, I'm not interested (nor can afford) in the whole lot. How about posting some individual prices - or are you going to offer it on eBay as a lot also, if you can't sell it here that way?

Thanks,

Al - K8EUR

For Sale:
(Add shipping costs to all prices unless stated)

ARRL Handbooks:
1955, 1958, 1965, 1969, 1973, 1975, 1978, 1981 at $10.00 each
All in good to excellent shape, plus one re-bound 1955.

IRS Antique transmitter?!
Small HF Transmitter with 6146 final and Internal Revenue 5735 kHz
crystal,
with four small Thordarson transformers, apparently using Screen
modulation.
Missing outer case, but chassis intact and looks to be in good shape.
Plug-in coil final and has antenna relay, typical RFCs etc. No manual,
untested
Will sell for only $25.00

Lafayette 99-2503 Grid Dip Meter - brand new in box and unused!
All original. Great little GDO, with all coils, case etc. $40.00
(SOLD??)

Lafayette 99-5020 Capacitance Substitution box - like new $10.00

Lafayette 99-5021 Resistance Substitution box - like new $10.00

DRAKE TV-1000-LP Low Pass Filter 30 MHz 1000 Watts $24.00

2 posn. antenna switch with SO-239 connectors $15.00

Plate variable transmitting capacitors:
50 pF 800V Hammarlund 1.5" deep, 1/4" shaft, clean used $5.00
140 pF 1000V 1.5" deep 1/4" shaft New, unused $8.00
200 pF 1000V 3" deep 1/4" shaft clean used $6.00
250 pF 1000V 2" deep 1/4" shaft clean used $7.00
400 pF 800V Brass plate variable KS-8221, 3" deep used clean $5.00

250 pF 2500 V transmitting capacitor 154-9 by E.F. Johnson
1/4" shaft measures 2" X 2" X 6" Brand New $20.00

Loading Capacitor - 5 Section, each 400 pF for a total of 2000 pF.
Great for transmitter or linear amplifier. 3" X 2.5" X 6.0" deep.
3/8 diameter shaft. Brand new and unused. $18.00

Loading Capacitor - 2 section, each 500 pF. With 3/8 in. diameter
shaft $5.00

Wall transformer, 120V AC to 14 V DC 500 mA - $6.00

Heavy-duty footswitch - brand new with AC cables m/f $15.00
(SOLD??)

Brand new SHURE 514B Mobile Mic in Box - sharp-looking. $15.00
(SOLD??)

MFJ-564 Precision Iambic Key Paddle in excellent condition. Chrome
finish with clear red paddles. $45.00 (SOLD??)

Heath DX-60 and HG-10B with manuals - excellent shape. 90 Watts CW and
60 Watts AM
on 80, 40, 20, 15 and 10m. A few nicks on top cover of DX 60. Front
panel is excellent.
VFO looks like new. With all cables etc. Will sell DX-60 for $85.00
Will sell mint HG-10B for $60.00.

EICO 753 transceiver for 80, 40 and 20m SSB, AM, CW. Excellent
appearance. Includes EICO 752 AC
power supply for 120 V AC operation, all opriginal manuals etc. Needs
two 7199 tubes available
for $9.00 each and a small replacement speaker for the power supply to
get it on the air.
$150.00 (SOLD??)

Yaesu FT-840 HF transceiver. Includes original manual and microphone,
DC cable etc. VLF
through 30 MHz with 100 Memories. SSB, AM, CW, RTTY etc. 100 Watts
output. Has two additional
filters worth $120 each, for wide AM and narrow CW. The 6kHz AM filter
is essential for
listening to Shortwave broadcasts, hams on AM etc. All band tranmsmit
enabled.
In mint condition, very low mileage (!) This is one excellent radio
for the money.
I love it but apartment life forces sale. Will sell for $600.00

Kenwood TM-261A VHF FM transceiver for 2m. 50 Watts output. With
manual and microphone.
(The mic needs a new PTT switch available from Kenwood for $1.75)
otherwise in
perfect shape. $175.00

Stancor ST-202A transmitter - a classic rig for 10m AM mobile
operation. Original case and
in very good condition. Includes repro manual and appears to be a
very, rare item
normally only seen in the old magazines and handbooks. Will sell for
$50.00
(SOLD??)

Tube tester I-177B in excellent shape. Case was painted red and needs
to be re-done, but front panel and interior in good operating shape.
With manual.
Will sell for $70.00 (SOLD??)

National TMK-50 Variable capacitor New In Box $15.00

Modulation Transformer UTC Model S21 unused, classic. $50.00

Collins 20 Watt Modulation Transformer, unused classic. $40.00

Thordarson transformer - THORDARSON D161916
power transformer 120 V AC primary potted, square - has two
secondaries:
Sec 1: 5.78 H, C.T. 48 ohms - gives 700V c.t. at 250 mA
(24 + 24 ohms DC)
Sec 2: 23.6 H, 605 ohms - gives 1580V at 20 mA
(605 ohms DC)
Approximately 4.5" X 4.5" x 4" Good for about a 180-200 Watt plate
supply.
Will sell for $20.00

UTC choke Model PA104 $15.00
This Inductor is a 18 Henry job with a tap at 14.4 Henries.
99 ohms series resistance It's large - like 5" X 5" x 4"
Good for a choke input filter on a nice sized 200 Watt plate supply.
Will sell for $20.00

Fujitsu Color Printer Model DX-2300, Low miles(!)
This is a dot matrix prinbter, but made very well, and in excellent
condition. Uses tractor feed or single sheet plain paper.
With manual - only $25.00

Books:

1981 ARRL Handbook, excellent condition ONLY $8.00

Television For Radiomen, by Ed Noll. 340 pages, illustrated
1962. Front cover torn a little but otherwise very good $3.00

TV SICK? Service your own TV, by Belmont TV Co.
33 pages, plus sale flyer, 1975 MINT $2.00

METHODS OF TEACHING SHOP AND TECHNICAL SUBJECTS by Leighbody & Kidd
College text, 201 pages, excellent condition $3.00

All four books for $13.00

Hallicrafters Manuals:
HT-46 $8.00 each (repro)

4222. FS: Russian 6C4C (=6B4G)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-14 00:00:00 UTC
From: arnoldg@sf.telia.no
Message-ID: <36ebf910.2248464@news1.telia.com>
Source record: 87801
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.ham-radio,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.amateur.equipment

I have found some of these excellent 6B4G valves. 6C4C in Russia is
equivalent to 6B4G and it looks identical to the old Sylvania 6B4G
with double anode stapped together by a metal plate, not the type with
two separate anodes. The 6C4C valves is very well built and give you
an impression of high quality. It is unlike the new Sovtek 6B4G which
looks like a scaled down Sovtek 300B with a single anode.
E-mail me if you are interested.

Best regards,

Arnold Goksoyr

Can anyone tell me what the brown, bubbly-looking compound
used for sticking the bakelite bases of older tubes is?
And is there some way to make it turn loose without
breaking the glass?

This message is for those of you that stay off of ebay...too bad, there's great stuff on there. Here's the description of the 75A-4 I put there.

Collins 75A-4 Amateur Radio Receiver with matching speaker. Works great! Using just a simple wire antenna, it pulls in distant stations with crystal clarity. Tube set from the late 1950's. Proceeds from sale go to Seneca Radio Club W8ID Field Day Tent Fund.

After the description are plenty of great photos. Please go and see them.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=77736556

Happy bidding.

4228. Drake ?? What Is It?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-14 00:00:00 UTC
From: Gary Johnson <wy0v@cableone.net>
Message-ID: <7ch6jsjeo1@remarQ.com>
Source record: 87807

Can someone identify the following item? I got it several years ago from an estate. It is in a black aluminum box, 4 inch x 8 inch, 4 inches tall. There is a connector on each end labeled PL-259. This box is mounted to an aluminum plate with spring loaded clips. .

The printing on one end reads:

F-15/U
A-3442 CAQW 338-DAY-DE-RC

There is also a inspection paper tag.
The printing on the tag reads:
R. L. DRAKE CO
DAYTON OHIO

MODEL FILTER F-15/U

INSPECTED _____

TESTED _____

DATE JAN 15 1945

There is also a small red stamped label that reads:
SC
1040
A

I assume that this is a low pass filter, but am unsure what frequency it was made for. I'll bet there are a few old timers out there who know what it is!

I do not check the news group very often. If you have any information, please respond to my email address:
wy0v@cableone.net

Thanks,

Gary Johnson WY0V

4229. Re: "Tesla" broadcast receiver??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-14 00:00:00 UTC
From: Martin Ackroyd <martin.ackroyd@virgin.net>
Message-ID: <36EC1FE4.6CBD26B9@virgin.net>
Source record: 87808

I believe Tesla radios were made in Czechkolsovakia until
the 1950s and probably later. I have two of the little
sets using two UCH21 triode hexodes [the second as IF and AF
amplifier] and an EBL21 double-diod pentode / audio output.

One of the sets is very stylish - looks like a 1950s space helmet.

Martin

I am selling a matched quartet of GE 7189A tubes. They are NOS/NIB, and the boxes are like new. They spent a day on my burn-in bed prior to testing, then they were operated at full power before the parameters were checked. Each was tested with 250 V on the plate, 250 V on the screen, plate current at 45 mA. Hereï¿½s the specs on the tubes;

Tube 1 ~ Eg1 = -7.15 V / gm = 11.06 mS
Tube 2 ~ Eg1 = -7.17 V / gm = 11.06 mS
Tube 3 ~ Eg1 = -7.27 V / gm = 11.04 mS
Tube 4 ~ Eg1 = -7.37 V / gm = 11.02 mS

$60 for the set, shipping included. US 48 only, please.
If interested, email me at <OvrReactor@aol.com>

OR, check out these two items I have posted on eBay. There is NO RESERVE, and I started the bidding at $1. These auctions end at around 7:00 PM Pacific, Monday 3/15.

This is pretty special & here was the post from antiques

Subject: WTB... Sparton 558 4-hole sled less glass
Newsgroups: rec.antiques.radio+phono
Summary:
Keywords:

Notice a match with another post here?

We're having trouble with middle ground.

However, if you have the chassis/structure to one of these
sets I'm certainly a purchase candidate. And the tie'd be broken.

The 558 '4 hole' has a 6" dynamic speaker, is transformer-powered,
only 5 tubes, and a BC (bottom) & SW (top) beige 'airplane pointer' dial.
"Structure" I mention is a rectangular 'skeleton' around chassis, sled
--More--
runners underneath, and chrome 'flutes' over speaker grille on right.

Thanks,

Marty Reynolds

This is worth at least a 32S1 RX to me.

Marty (Hope Springs Eternal) AA4RM

Hello Bill

If your transformer is going bad I'd take a look at using a power transformer from a Heath HP-23 or make up a power cord and use an HP-23. I've used one successfully for quite a while.

Snap the back cover off the drive control pot - it will provide better
cooling for a component running near its dissipation rating.

I have a 75A-4 (no speaker) that I plan to put on ebay, too, one of these
days when I get a digital camera to take a picture of it. No, I didn't pay
$200 for mine, but it did come from an estate sale, along with a 75S-1/32S-1
station that will also be sold.

Good Condition Tektronix 60 MHz O'Scope. One book. *no probes* (using them on
my newer TEK 2246). Has cover. Non-smoker. Wgt: 13 lbs. (Great Portable!)

Woul like to sell for $600 obo, or trade this wonderful Portable field instrument for a decent AM station consisting of Johnson Transmitter (Ranger II
or Viking II-w/VFO), and good working condition receiver (No Junque, please).
SP-600/National NC-300 Vintageis the level of qualityin a RX that I'm hoping
for. (I sold my last one off for $75.00 ten years ago... now I could shoot
myself over it!)

Chuck Bullett; Director of Engineering-WGAN/WMGX/WPOR AM&FM/WYNZ/WZAN
Saga Communications of New England, Inc.

Thanks for info on airline tracking, kind of interesting and helpful.
Len

Wow, does that bring back memories. I was 16 years old, and working part time at a grocery store when I ran into a fellow that owned the TX, RX and Band Scope. He was getting ready to move out of state, and was willing to sell. I was working diligently to purchase said same, when that fateful day came and someone else bought it out from under me. Such is life...

For those of you who have never seen this setup, it was the greatest looking groupings of equipment. Loved that electric QSY'er. One button instant dial spin.

Good luck guys.

I
To all who sen me email on my request. Thanks muchley.

I found out just how big the manual is and how unreansonable my
request was.

I did locate one at SSN, so I orderd it from them.

Thanks

Chris

This will NOT work if you actaully WANT to get the glass away from the
base. Tubes may not be all that smart but neither are they as easy to
fool as you might think. The tube can figger what you want and do
the opposite.

Looking for original knobs for my WRL Globe King 400B. (Same knobs as found on most 400's and 500's).

Will purchase (Premium for "complete" set) or trade for?? I have numerous other boatanchor knobs - Hallicrafters, Collins, Heath, misc. "Dakaware" types, etc.

Thanks/73

Ron Ostman, W0NYQ

+AD4-I'd rather know what the best way to reglue a loose tube would be?

For re-gluing bases, ordinary cyanoacrylate glues work well (super-glue). Likewise epoxy glue may be used. I generally prefer the 24-hour curing type as it has a small residual flexibility. The 5-minute epoxy cures to a very brittle material.

For plate and grid caps, 24-hour epoxy works well. Likewise high temperature RTV silicon may be used. This is normally colored red and I think it is GE RTV-506. The red Permatex silicone for high temperature engine and muffler repair is essentially the same material.

What ever glue is chosen, allow it to cure completely before using the tube.

Hi all!
I'm going to try and continue a ground-up rebuild of my HQ-120X
which was started a few years ago. Just wondering if anyone has any tips,
pitfalls, or "don't mess with this part" stories to tell? Any info is
appreciated!! Also, does anyone have a set of knobs (especially the main
tuning, band spread and cabinet handles)? I've heard someone makes new
replacements of these?

Thanks!

I believe it is a alkyd-phenolic resin. Being a thermoset, there is no solvent that will attack it that will not attack the rest of the base and goe through rubber gloves too. Be patient and flex the base a little at a time (a very little) in a vise to break it loose.

I'm having a problem with my Kenwood TS 820s display. On 10 and 15
meters it shows random unreadable numbers, but is fine on all the other
bands. Sometime, after the rig is quite warmed up, it "corrects". But I
don't want the display to be intermittent. Anyone have a fix for this? I
tried cleaning the contacts on the connectors to the display assembly,
no joy.

Message-ID: <7cj19e$f31$1@uuneo.neosoft.com>
Source record: 87771

Circumstances force me to sell my classic National NCL-2000. It generates nearly today's legal limit from a pair of 8122 tetrodes.That's at 2220 VAC, but it will operate on 115VAC (not recommended). These tubes were designed for SSB service. Yes, they're rare and fairly costly today, but the current tubes are 100%. The best news is 2 nearly new spares are included. A copy of the book is also enclosed. Condition of the case and front panel is quite good, 4 main knobs in the front panel are scuffed and worn. They could probably be buffed out. Price is $650 dollars. This amp is heavy, and I'd prefer to deliver within a hundred miles of Houston TX. Shipping is possible, I'm open to suggestions.

My second amp is the well known Collins 30L-1. It delivers just over 700 watts at 120VAC from 4 811-A tubes. They're still pretty cheap new. I don't have a set of spare tubes for this amp. Included is a copy of the manual. Condition is good, especially the front panel. Price is $500 dollars. Prefer the same delivery deal as above, but this amp is far lighter.

Hope you can add these to your collection, especially with the Summer static on the way. Reply direct.

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

I picked up a General Radiotelephone Company model VS-2 CB radio at a surplus shop the other day. It's a tube-type, crystal-controlled, 5-channel, base/mobile transceiver with a built-in power supply (with transistorized multivibrator for mobile use), and a Nuvistor front end. It's very small, about 4-1/2" tall, 6-1/2" wide, and 12" deep. No frills, just volume, squelch, channel selector, and a power-on neon bulb. The transmitter works, but the receiver doesn't yet (several bad tubes, replacements on their way).

Does anyone have any information on this set? Was it made by the same company that now goes by GenRad? Was there ever a Sams CB Photofacts manual on it? When was it made? So many unanswered questions...

The surplus shop had two other General Radiotelephone models there, same size and shape but with a "local/distant" switch and a "CB/bullhorn" switch on the front panel. I may go back and grab them also, if I can get this one percolating right! They might be interesting 10m a-m transceivers, eh?

Thanks in advance for any help you can provide!

73,
Dean / K5DH

Source record: 87780

Greetings to the group:

I am in touch with an Invader 2000. It is not mine. Only trying to help a friend.

I haven't seen the transmitter for a long time, so this is from memory and input from the original owner:

The rig was in a fire a long time ago and the cabinet was damaged. The owner cleaned it and fired it up and said that it still worked. It is restorable. Front panel needs re-silkscreening and painting and of course, the cabined needs painting. Wiring is supposed to be good. This is an original 2000, not one that was upgraded. Tubes reported to be ok.

Since the thing is so rare, neither of us has any idea as to it's value.

The owner is not interested in shipping. He lives in the Tulsa, Ok. area and would be strictly a pick-up deal. This would be an excellent restoration project. He has the cabling and original manual. He is the original owner.

Any interest out there? Offers?

Please reply via private e-mail

Thanks, Larry W5vhp@aol.com

4335. Trade/FS: Drake R4-B Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-15 00:00:00 UTC
From: kb9olm@hotmail.com
Message-ID: <7cjf2t$41f$1@nnrp1.dejanews.com>
Source record: 87782

For sale: Drake R4-B Receiver, serial # 12869, complete, but audio control knob is missing. No manual. No additional crystals. The radio does not work, but appears to be alive by reacting (S-meter and audio output) on swithes settings and producing noise when tune preselector on different bands, tuning BFO and changing other controls. May be RF stage or LO need work. Also hums, need new filter caps. The radio is dirty and dusty, and needs good cleaning inside and out. Looks like it was stored in a basement or garage for the last 10 years or so. No corrosion on the surface of chassie. Little surface rust on screws holding covers and covers itself and some metal knobs. Would like to trade for RAL-7 Navy receiver or will sell for $75 plus shipping. Please reply to Vlad at kb9olm@hotmail.com

David,
I think that in the older tubes [eg pre WW2] it's
primarily shellac. It can readily be softened by
soaking in alchohol [what is called methylated spirit
in Britain - ethyl alcohol with a proportion of methyl
alcohol and a blue dye to stop you drinking it]. Dunno
what it's called in USA; 'industrial alcohol' maybe?
Good luck
Martin

Wayne,
It's very easy [since cyanoacrylate adhesives have been available].

Just put a drop of superglue where the glass joins
the base and let it run in. That should keep fix it
for good.

Looking for Becker Short-wave Converter used for older (AM) Becker Car Radios. It is called the "Rheims" converter and has a push-button panel with 6 buttons corresponding to the SW bands 16, 19, 25, 31, 41, 49 meters and a button marked "0" for out-of-circuit. Early models were tubed, later models used transistors and had some additional SW bands but similiar. Will buy or trade vintage Ham stuff. Sheldon, KT2L, 914-937-6376.

HI
You guys are not alone. I've been looking for a E 410 manual since last
June with no results. If you find anything please let me know.
Hy Manuals has a manual for the E 400 but not the 410. Not sure how much
difference there is.

I've just acquired this radio and wondering if other owners are out there...
If you can share your story and history about this great radio, I would
appreciate it very much. I believe it's a hybrid radio with 8 tubes & solid
state...
What year was this radio first introduced? Was it Hammarlund's last
production?
Thanks.

4363. 8560-AS EIMAC TUBES F.S.

From: zepp9@hotmail.com
Message-ID: <36edbd29.18289860@news.zianet.com>
Source record: 87716

The ER article about changes to the Viking II audio section is excellent. Like the author, I found that the engineers working for Mr. Johnson were wrong when they claimed the modulators were running AB2. Not so. They run AB1 in the factory version, and flat-out do not deliver sufficient audio to 100 percent modulate, However, if you load to only 75 or 80 watts of carrier, the stock modulators will get by. Maybe. In conclusion, convert the modulators to AB2 and you will have a better-sounding Viking II. Regulated screens are a good start -- a very stiff (or regulated) bias supply is another good idea. And better "iron" in the audio transformer feeding the modulator grids is another good improvement, For a good treatment, see Electric Radio June, July and August 1998 for the 3-part series by K6AD. Good luck! -- Richard

I need a 3 postion AGC switch for a Kenwood TS 820s. Actually, I just need the knob, or black lever for the switch, as the switch still functions normally, and I guess this lever snaps into place on the switch. This is the black paddle switch on the front panel of the rig, next to the VFO. You know, where it says Off/Slow/Fast.
I also need the connecting cable for VFO 820 (I know I could make one, but I would like to have the original) and the 9 pin jumpered VFO plug.
Thank you.

Rod,

I just rebuilt the pair, the E410 and the E-200 RF generator. I had a schematic for the 200, but not for the E410. I also searched high and low for a connector for the RF output on the 410. The 200 uses Amphenol microphone connectors which are still available. (As does the 410 for the external input.) I kludged together a cable and connector, but am still kind of looking for an original connector for the E-410. Let me know what you find. As far as the probes go, they are pretty straightforward if you can find the connectors. E-Mail me back if you don't find something, and I'll describe what I did in detail.

>>Icom 765 HF Transceiver<<

Original owner, new in 1995.Condition is perfect, looks and works like new.Covers all amateur, and offers general coverage on HF bands with 100 watts RF output. AM, SSB, FM, RTTY and DATA modes. Has optional Tone Encode module, and Voice module. Internal power supply. MARS/CAP Mods professionally carried out. Built in Antenna Tuner matchs up to 3:1 loads. This a very rugged radio, the last of the big Icom rigs. Has 100 memories, VFO A/B, IF shift and Notch function. Great sounding AM rig, and has lot of CW features, including internal keyer and pitch control. Complete with original box, operations manual, service manual, and other paperwork. Payment terms are Bank Check or Postal Money Order before shipment. If you have any questions, feel free to email to me.

Wammes,

I understand and respect your opinions, but Mr. Heston's speech had far
less to do with the NRA and far more to do with moral and intellectual
honesty. There are other rights that we enjoy and should jealously
protect. Our rights to think and speak as we please are among them.
Try not to let your opinions about something cloud your judgement and
ability to reason clearly about others.

Russ Nixon - KF4WXD

Frankly, I'm Dutch. We do not like guns in the hands of
>citizens. We have strict laws against it - and as a result, we have less
>violent crime then some countries where guns are easier to get..

Jon Pearl Replies...

Handgun crime is on the decline here in the United States. We have vast numbers of guns.

Home invasions in the U.S. are on the decline. Burglars know that their fate is in the homeowner's hands.

Handgun crime is on the decline in the United Kingdom also. In fact their citizens no longer have the ability to maintain ownership of guns.

Home invasions in the U.K. are soaring! Burglars invade, day or night with impunity!

The weapons of choice in the U.K. have now become, fists, blunt objects, sharp objects, etc.

Violent crime in the U.K. is on the rise. Citizens no longer have the 'tools' to protect themselves.

Your country is beautiful and it's people are a testament to modern society and civility.

You might also be interested in noting that there is a government issued semi-automatic rifle in the homes of most Swiss citizens. Switzerland's crime rate is very low.

Wammes, I admire your courage to wade into this off topic discussion and
appreciate a view from across the pond. Your comments are well taken and
I don't mean any disrespect at all. However, I, as an armed US citizen,
can tell my government to go to hell if they insist on making me do
something that is unconstitutional. You can't do that in your country!

Rich, you are obviously aware that rec.radio.swap exists for the purpose of selling radio equipment. You should also be aware that cross-posting to the other four groups is not appropriate.

For those not familiar with eBay, it encourages the leaving of feedback. Six people with whom Rich has participated in auctions have left negative feedback, cut and paste below. Rich bent the rules to argue his side a couple of times by improperly giving himself positive feedback. These are included.

Rich, anyone can have one or two disagreements customers, but your record demonstrates that you have a problem.

Cut and paste from eBay:

User: 1rich (richcom@earthlink.com) (34) Date: 12/20/98
14:50:51 PST
Praise: risd below,made complaint,but blue52 won bid
#42357582 He uses two Id's. Why???
User: risd (risd@flash.net) (11) Date: 12/20/98

Maybe if you had read the article you would understand what's going on. While it is partially about America, it is more about the politicians and other scumbags trying to take away our rights. And that includes Amateur Radio!! You have to stand up and speak your mind sometimes instead of just following like a bunch of sheep. Don't take it for granted that what you are doing today, be it radios, guns or whatever, is always going to be there.There are to many instances in history where peoples rights have been taken away, and many times it was because they didn't have enough guts to stand up for what they believe in. So first, get a clue and read something before you get indignant, and start spouting off a bunch of nonsense that you don't even know what you're talking about.

Left-wingers have a remarkable capacity to find absolute evil in a conservative who talks about morality, decency and the self-sacrifice that's necessary to stand up for what is right.

Just remember, many of these same left wingers rose to the defense of our "president", who:

- Smoked pot, but didn't inhale.
- Didn't dodge the draft.
- Never got any loan from the Whitewater deal (although the canceled check turned up later)
- Didn't have sex with Jennifer Flowers.
- Has no idea how NINE HUNDRED FBI files got in to the White House.
- Didn't lie under oath in the Paula Jones lawsuit.
- Received (through Al Gore) political donations from the Bhuddist nuns, in sequentially numbered checks, all made out for exactly $5000. All completely legal, of course.
- Didn't respond to those donations by personally overriding the objections of the Pentagon and State department, allowing Loral to sell previously restricted missile guidance systems to the COMMUNIST CHINESE.
- Didn't have a sexual relationship with "that woman, Miss Lewinski" (wagging his finger in righteous indignation).
- Said, with a straight face, "it depends on what the definition of "is" is".
- Didn't rape Juanita Broderick - at least we assume he didn't. He simply won't respond to the allegations.

It was the liberals who in the past stood up against the war in Vietnam, racial oppression and corruption in political office. It's interesting - and very sad - how they've abandoned their principals and redefined hypocrisy. The fact that someone could read Charlton Heston's speech and interpret it as a call to "inciting others to join their madness" tells you just how twisted their reasoning can be.

It's 1984 already.

With regrets,
Charlie, KS1C

I know this is off topic.
I know-- I'm a baaaad boy.
It's also important.

I wasn't going to say anything else, but Mr. Young's statements
need an answer. They are protected speech-- he has harmed
no one by his opinion, and they are understandable given
modern conditioning. So please don't flame him!
But free opinions are not always correct opinions.

Let us allow Mr. Heston's own words to answer Mr. Young's charges:

Michael Young wrote:
> Chuckie is advocating mob action, not independent thought or counsel.
> Not once does he admonish you to get the facts and weigh their meaning.
Heston: "I want to...re-connect you with your own
sense of liberty ... your own freedom of thought ...
your own compass for what is right... Who will guard
the raw material of unfettered ideas, if not you?
Democracy is dialogue!"
To any person not pre-conditioned to a certain attitude,
this is a clear call to honor your independent thought
and to debate that thought. Moreover, he presents some of the facts
through example and metaphor throughout the speech. The need
to weigh them is implicit in their presentation within the
context of the above quote.

> You only need to feel morally outraged, and to express it loudly
> everywhere and to everyone. If they won't listen,
>do everything you can to hinder them.
Explicitly untrue statement.
Heston: "But what can you do? How can anyone prevail against
such pervasive social subjugation?...
You simply ... disobey.
Peaceably, yes. Respectfully, of course.
Nonviolently, absolutely."
Clearly, Mr. Heston has not advocated doing
"everything you can to hinder them."
I submit that this response is typical of conditioned responses
brought about by the tyranny of thought that
masquerades as "liberalism" today.
Tyranny doesn't always wear a swastika.
Sometimes it wears sheep's clothing and calls itself "liberal"

while ruthlessly attacking those who's opinions differ.

(Personal and unsupported attack against Mr. Heston deleted.)

>I went there looking for something of substance;
>whatever it was you saw, I missed it entirely.
Attitude conditioning from television and
modern academia prevents actually seeing what is clearly written
and generates a conditioned, knee-jerk negative response.
The quote about "hindering" above is a good example.
This doesn't mean the person making the charge is "bad."
It means they are unfortunately influenced by these decades
of conditioning. They are intelligent.
They will come around in time.

Kind regards,
David Stinson

I'm looking for a working and good condition military AM transmitter. Key word here is operational... I would be nice if it were in fine condition, too, but I'll have to take what's availbale...hi. Anything from an ART-13, T-195, etc. (100+ watts out) up to a T-368 (dream on!!). All offers given full consideration. I'm in central Maryland.

Seems highly relevant to the UK, to me.

Naturally one expects some opposition.

Stood on any rusty balconies lately?

Probably the most surprising aspect of Heston's speech, personally, is that isn't quite the mad ramble I was expecting. I might not necessarily agree with him, but he's not out of line. He makes good points, although I can't reconcile the NRA with anything I personally believe in.

I have to agree with Charlie. The Left has really dropped the ball. It's tragic. However, we've been rather quick to forget the travesties committed by the two previous, republican presidents. A similar litany to Charlie's of Bush's and Reagan's careers would be quite impressive.

To all readers outside the USA, I hope you at least find all of this amusing. If not, I apologize. As for me, I'm fascinated by politics, and I'd love to read similar rants regading politics in other nations.

Speaking of other countries, is Canada hiring?

Sincerely,

Neil

Stop!
Stop!
Stop!
If you don't live in AMERICA then it's no sweat off of your back, is it?

Whether the article
>is about being true to your country patriotism or some USA-centric
>Patriotims I'll never know because I'm not checking the linkk,

Let me ask you something... If you were to get up on your soapbox and
speak to some issue that you feel fairly motivated by, like - oh I don't
know... Nationalistic Pride - Patriotism - Love of God and Country, the
fervent desire to allow others, (who through no fault of their own, are in
such position that, the worst of what 'WE' have is not even attainable) to
make their dreams a reality - would you think me wise to call you...

Canada-centric???

but bumping
>into all the "me too's" I sure get the impression that it's about America.

It may well be... Which brings me to the question...

So what's your 'uniformed' point?

I thank you for your thoughtful reply. Further follow-ups can go to me
at myoung@interaccess.com.

David Stinson <arc5@ix.netcom.com> wrote in message
> > You only need to feel morally outraged, and to express it loudly
> > everywhere and to everyone. If they won't listen,
> >do everything you can to hinder them.
> Explicitly untrue statement.
> Heston: "But what can you do? How can anyone prevail against
> such pervasive social subjugation?...
> You simply ... disobey.
> Peaceably, yes. Respectfully, of course.
> Nonviolently, absolutely."
> Clearly, Mr. Heston has not advocated doing
> "everything you can to hinder them."

Heston, in his own words:
"When a mugger sues his elderly victim for defending herself... jam the
switchboard of the district attorney's office.

"When your university is pressured to lower standards until 80% of the
students graduate with honors . . . choke the halls of the board of
regents.

"When an 8-year-old boy pecks a girl's cheek on the playground and gets
hauled into court for sexual harassment . . . march on that school and
block its doorways. When someone you elected is seduced by political
power and betrays you . . . petition them, oust them, banish them. When
Time magazine's cover portrays millennium nuts as deranged, crazy
Christians holding a cross as it did last month . . . boycott their
magazine and the products it advertises."

These imply judgements in haste from factoids presented in mass media.
Certainly there are public acts that cannot be misinterpreted. It is
quite something else to call on you to act on the scant knowledge
filtered through the evening news.

By themselves, this quote and Heston's "moral compass" snippet are
relatively harmless. However, they say very different things. The first
calls on you to express your liberty; the second directs you to act
against the targets selected for you. Combined, they implore you to
accept the judgements presented by the press, and act harshly and
decisively. Perhaps to a cognizant majority, the unspoken step of
evaluating what you *don't* know versus what we are told is clear, if

implicit. However, I lack the faith that the majority habitually exercises independent thought or judgement. Your words, and the mere fact that you were moved to respond, say you share at least this much of my cynicism.

> I submit that this response is typical of conditioned responses
> brought about by the tyranny of thought that
> masquerades as "liberalism" today.
> Tyranny doesn't always wear a swastika.
> Sometimes it wears sheep's clothing and calls itself "liberal"
> while ruthlessly attacking those who's opinions differ.

You've obviously mistaken me for something I am not. This is easily forgiven, as you know me only from the few words I wrote. I find it ironic that your rush to judgement here is precisely the example I sought above.

> (Personal and unsupported attack against Mr. Heston deleted.)

Heston: "Underneath, the nation is roiling. Americans know something without a name is undermining the country, turning the mind mushy when it comes to separating truth from falsehood and right from wrong. And they don't like it."

Heston: "So that this nation may long endure, I urge you to follow in the hallowed footsteps of the great disobediences of history that freed exiles, founded religions, defeated tyrants, and yes, in the hands of an aroused rabble in arms and a f ew great men, by God's grace, built this country.

I stand with my likening of Mr. Heston to a "loose cannon". It was not a personal attack. A loose cannon on the rolling decks of a frigate at sea is a danger to everyone. A call to arms -- I interpret his speech as thus -- with no clear target, in the name of liberty and democracy, is likewise dangerous. To counterpose, I asked only that we take the time to evaluate before acting.

Maybe he is right, and I am wrong. Maybe action, any action, is better than the paralysis of uncertainty. In a colorful world often portrayed in black and white, there is a large area of un-black and un-white, and TRUTH lies there, not in these fringes. He urges you to pick a cause, any fair and just cause, and act. I urge you to consider the undue harm you may cause in your zeal, and temper this need to act.

Michael.

>Heston, in his own words:
>"When a mugger sues his elderly victim for defending herself... jam the
>switchboard of the district attorney's office.

The left wing advocates what? Feeling the muggers pain?

>"When your university is pressured to lower standards until 80% of the
>students graduate with honors . . . choke the halls of the board of
>regents.

The left wing, which finds a comforting home - if not its very roots - in the hallowed halls of education, tells us that lowering standards rather than demanding excellence is justified. After all, it gives the student "high self-esteem". The fact that we routinely pass students along to the next grade, with serious gaps in their skill-set, doesn't indicate a problem in the school system. It simply means we have to spend more money on it.

>"When an 8-year-old boy pecks a girl's cheek on the playground and gets
>hauled into court for sexual harassment . . . march on that school and
>block its doorways.

Yes. No doubt he's just learning how to oppress women. After all, according to the radical left, that's every man's calling.

When someone you elected is seduced by political
>power and betrays you . . . petition them, oust them, banish them.

The left wing suggests you just re-elect them. After all, a Democrat - ANY Democrat is better than ANY Republican, regardless of their conduct.

>These imply judgements in haste from factoids presented in mass media.
>Certainly there are public acts that cannot be misinterpreted. It is
>quite something else to call on you to act on the scant knowledge
>filtered through the evening news.

The left wing, typical of liberals, doesn't have the faith in your ability to understand the politics of the day. Rather than believe that you would actually have some idea of what you are protesting, before you risk your reputation or even arrest, they will believe that you must be a robot, marching on orders from the secret headquarers of the Vast Right Wing Conspiracy.

Of course, this is in keeping with the Big Daddy Government philosophy that the left wing promotes. WE need to take care of YOU, because you're not smart enough to do it yourself. More government regulation will do the

trick.

>By themselves, this quote and Heston's "moral compass" snippet are
>relatively harmless. However, they say very different things. The first
>calls on you to express your liberty; the second directs you to act

>against the targets selected for you.

A paranoid interpretation at best. A deliberate misrepresentation at worst. He simply suggests that you no longer passively tolerate the outrages that the left wing has heaped upon our society over the last few decades. Political Correctness is just the latest of many.

Recall if you will, the period of our American Revolution. A battle incited by men of position and wealth - men who had EVERYTHING to lose. One of those men, Benjamin Franklin had a remarkably insightful quote on this topic. He said "He who gives up a little liberty in order to gain a little safety, deserves neither". We're well advised to stomp out this disease of "political correctness", that threatens to stifle the free exchange of ideas - and to do it while we still can, hopefully (with apologies to George Orwell) sometime before 1984.

And yes, it's off topic, particularly to those outside the USA. My apologies.

Charlie, KS1C

Two layers of asbestos underwear on.

What a SHAME that critics of the NRA so EAGERLY assume that all it's about is nasty GUNS! Fact IS, the NRA is about individual freedoms and the rights of ALL, combined with access to the tools, to most properly maintain it - as outlined and established in our country's Bill of Rights - the rights of INDIVIDUALS! The NRA, and its members basically feel that without the "enforcement" capability provided by the second amendment, all the rest are uninforceable when push comes to shove... Sort of what would happen in civil law enforcement if we only had police, but no judges or prisons to actually ENFORCE controls upon those who disregard our laws.

Not sure WHERE this non-sequiter came from - Heston's comments were aimed at opposing philosphies of our society, not individual Presidents - did you perhaps feel a twinge of discomfort due to your political affiliation?

>Speaking of other countries, is Canada hiring?
>

UMMmm - well, I would suppose that if you are deeply inclined to seek out and become a part of a country/society more involved in the idealogy that all you have, are or ever hope to be, MUST be provided and controlled by a government "caretaker", Canada WOULD be a good place to start...

> Charlie, KS1C - that's the CALLSIGN, which completely identifies me. KS1C.

I realize that many hams are proud of their call signs. I like mine. I
even have on my car's license plates...

But why are we so hung up on "callsigns"? An amateur call sign
identifies the station, not the operator. I have always found this to
be a wierd thing about hams - I was involved in land mobile, marine, and
flying airplanes before I got into amateur radio. Never met anyone in
those services that introduced themself by their licensed call sign. I
identify myself on and off the air with my name. I identify my station
with it's call sign.

And you can't get my street address with my call sign. I don't even
live in the city on my license, let alone at the address. You might be
able to find my birthdate in some old database, but is there a current
database that has those?

But Charlie is right, a ham should be able to get a pretty good idea of
who and where he is by "looking up" the given call sign. But his post
was not over ham radio, it was over a newsgroup. And it wasn't related
to ham radio. To those non-hma that may be here, he is just a guy that
calls himself Charlie.

What if I signed this note with...

73,
Lisa
KD6ELA

What if you heard a female voice on the radio signing clear with KD6ELA?

Just curious Lisa, is your control station licenced at that address?
Just checking hi hi.

Wow, words of wisdom from a no coder.
What does land mobile, marine, and airplanes have to do with amateur radio? Can the FCC contact you at the address they have on file for you? Take a peek at part 97 O Wise One and see what the FCC has to say about that. Do you ever get any Qsl cards? Probably not, seeing as how it's rare to get a card for a repeater contact, especially if the address listed on the database isn't correct. Also, there is a local repeater with a voice ID'er with a woman's voice saying the callsign, but I have never heard a woman with the name of Jeff , which is the name of the control operator. Who really gives a rat's ass anyway, I sure as hell don't. You mentioned marine, I assume you mean boating, sailing,etc? I would sure feel stupid calling left and right port and starboard in daily life, but it is perfectly acceptable in the marine world. So what's the big deal calling yourself by your callsign, it's expected in the amateur radio community.
Signed, N0EE (look it up," Lisa,"(is that your name, or your "handle") if you need more info).

From what I gathered is the station must be licensed to transmitt in the amateur radio Band and the individual that is running the station transmitting in the amateur radio band must also have a license..That sounds clear to me. BUT, when you ID you station with your station CALL SIGN. aren't you telling people who you are and if you have the privledges to transmitt on that portion of the band? also when someone calls you back using your call doesn't it identify you.. Ex: KD6ELA This is KA8TOK this in turn want you to respond hence you are being Identified by call not name.. Let's face it a Radio is not going to ID itself without some form of voice or code ID set up by a human being and it's true most stations are IDed with a call sign and that call does ID the individual that Has the right to those Frequencies that are assigned to them by there License Class for that call. If it were not so then how do you explain Amateur radio Call books or CD-ROMs?

I *do* realize that in some countries other then my own, an interest in green - millitary - radios goes hand in hand with other hobbies I do not approve off. Frankly, I'm Dutch. We do not like guns in the hands of citizens. We have strict laws against it - and as a result, we have less violent crime then some countries where guns are easier to get..
The NRA is *not* my cup of tea at all - if I'd be an American I'd oppose them. But as it is, this is not my patch. So please stop advocating the NRA, it's chairman or applauding to one who does. This is an international newsgroup after all. Please take this thread to a place where it's not a spam - 'cause that what it is here! The amount of definitly off-topic messages is getting rather large, would'nt you agree?

Kind Regards, Wammes Witkop

Russ,

Whatever this is about - it seems *very* american to me. It does not relate to contempory Dutch issues, to be sure. Issues, that I will not discuss on this newsgroup, as they would not be of interest to the common demoninator here: Boat Anchors. That is the point I am trying to make - let's stick to business. Or, rename this group. To American BoatAnchors and revisionist Opinons. Just kidding...

But honestly, I happen to be a anti-millitarist. Strange, for someone with a hobby in green radios, I concede. Should I be posting treatises to my believes in that aspect here? I do not think so!

Try not to let your opinions on anything but BA's cloud this newsgroup, thats my opinion. The original posting was trespassing, the endless applauding does get on my nerves.

Kind regards, Wammes Witkop

I have a pair of Telefunken PL36 sweep/power pentodes. I picked these up years ago, but never finished the project I planned for the (truth be told, I never STARTED the project).

They're in perfect condition, with immaculate markings. They're essentially new, I powered them up for less than 15 minutes, and that was YEARS ago. (I tested them again today, and they test perfectly). Like an idiot, I discarded the Tele cartons, but they have been stored in white boxes.

I won't be using these, so.....is anyone interested in buying them from me? Please respond by EMAIL.

Regards,
Tom Mitchell

I thought my CALLSIGN was identification enough. For crying out loud, you can look up my name, street address, e-mail address and birthdate from that one piece of information alone. I don't post a reply-to address because I have no desire to be overwhelmed with spam in my mailbox.

Aside of that, it's an interesting thread. If you can somehow read it and find a way to be offended, it's YOUR problem, not mine. Democracies thrive on a free exchange of ideas. I'd not normally have responded in an off-topic newsgroup, but this is where the thread appeared. In fact, the Heston speech has been making news all over the country, so it's of some interest here.

Interestingly enough, that's one of the features of "political correctness". The new whining class demands that you not talk about something, or use their new PC terms because they find it offensive. You might want to go back and read the Heston speech.

In the mean time, stop your whining, and don't read posts that don't interest you.

This time I won't apologize.

Charlie, KS1C - that's the CALLSIGN, which completely identifies me. KS1C.

4453. FS- Nearly perfect Johnson Adventurer and Others

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-18 00:00:00 UTC
From: justice@neosoft.com
Message-ID: <7cr72sfqe1@uuneo.neosoft.com>
Source record: 87618

EXCELLENT Johnson Adventurer novice transmitter. Original paint still looks like new. Very minor paint scratches on cabinet corner creases. Meter is original and functions. Knobs are original and shiny, but as always, missing those tiny white pointers. Full output on all bands. No manual. cathode keying, so stay away from key terminals. Better yet, use a keyer or keying relay. $200.

Rare Globe VFO 755A. This is the match for the early Globe King 500 series without the VFO. Fairly good physical condition, has non original tuning knob with spinner handle. Plenty of output. May need new frequency determining caps to improve stability. No book $60.

Rare Heath Sixer. Operates normally. Front panel is excellent, upper part of lid was pried to remove from the cabinet, this could be easily fixed. No book or mic, but power cord provided. $40.

Hammarlund HX-50 SSB transmitter. Vox inoperative, power output varies from band to band, but works on all bands. Excellent physical condition, restored. Have a copy of the reprint Hammarlund supplied. $150.

Eico 720 Novice transmitter. Fair condition, but operates. No book. $50.

Eico 723 Novice transmitter with 6DQ6 final. Fair condition, but operates. Final tube is weak.No book $40.

Will discuss packing and shipping from 77449. Thanks!

The Charlie I was referring to was the Charlie who wrote the post I was
respondingto. Sorry for the confusion. I am by no means on a first name
basis with Mr. Heston
and certainly wouldn't call him Charlie. If I were being derisive, I
might have called
him Moses, but I was being respectful and complimentary. His speech was a
dignified
expression of opinion.

As far as any twinge of discomfort or political affiliation, I have
little of either.

4458. two Hallicrafters SX-42 questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-18 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <7crja6$534$1@remarQ.com>
Source record: 87623

I'm still trying to correct a weak-signal condition in FM mode on my Hallicrafters SX-42, and I have a two questions. The first question involves the proper voltages on the limiter (7H7) tubes. The second question involves the proper voltage for the S-meter.

The symptom I'm trying to correct is low volume in FM. Things work great in AM mode and I have good fidelity on FM -- but the volume is MUCH lower in FM than AM. I have recapped the set, cleaned all the controls and switches with DeOxit, and replaced all the old carbon resistors.

I have three versions of the schematics -- Hallicrafters, Rider, Sams -- and the voltage tables for the limiter tubes don't agree. Here's what the service sheets give for pin 3 of the 2nd limiter tube:

-- Rider: 30vdc in AM mode, no value given for FM mode
-- Sams: 0 (zero) vdc in AM mode, 65vdc in FM mode
-- Hallicrafters: 180vdc in AM mode, 90vdc in FM mode

In my set, I measure 42 volts for pins 2 and 3 on the 2nd limiter tube. The voltages are the same in FM and AM mode.

Connected between pin 3 of the 2nd limiter tube and the +250vdc line is a 56K resistor (R59 on the Hallicrafters schematic). By decreasing the value of this resistor, I was able to increase the voltage at pin 3 to around 140vdc. This increased the FM volume considerably.

Question 1 -- is it reasonable to make this modification to increase the voltage on pin 3 of the 7H7? I don't know what the operating specs for this tube are.

A second problem, which may or may not be related to the first, is that the S-meter is totally unresponsive in FM mode. Instead of zero-ing about 2/3 of the way up the dial, the needle slams hard to the left and does not respond at all when tuning in an FM station. The meter works perfectly in AM mode.

Measuring voltage at the meter, I found 250vdc in AM mode but only 150vdc in FM mode. In AM mode, the meter voltage varies between 250 and about 256 volts when you tune in a station. In FM mode, it doesn't vary at all.

The Hallicrafters clarified schematic for FM mode/band 6 shows one pole of the S-meter connecting to the 150+vdc line via the mode switch. That implies that 150 volts is correct in FM mode, but the meter isn't working.

Question 2 -- can anyone clarify what voltage to expect at the meter in FM mode? I have cleaned the mode switch and checked for proper connections, so I don't think the switch is at fault.

Would be grateful for any advice . . .

Cheers.

Phil

Message-ID: <36F1543E.2E83@roadrunner.nf.net>
Source record: 87624
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.shortwave,uk.radio.amateur

Many, many thanks to all who posted to the "Capacitor Replacement" item on this news group.

As an aspiring 'oldtimer' myself (I'm 65 March 19th) the breadth and depth of know-how and experience was impressive and helpful. And, by gosh, reminded me of things I had forgottent; like the capacitance bridge that measured leakage and provided 'forming' current.

My only contribution to your thoughtful information and comments is this: In the late 40s and 50s I recall 'testing' war surplus capacitors (usually multi section electolytics wth common negative can etc.) by the rough and ready method of connecting the negative wire and then 'striking' or brushing the positive HT/B+, at full voltage, across the + terminal/s of the capacitor. If it held steady after one or two doses of that it was deemed good! Wonder is never had one explode in my face! Lucky! However in that instance capacitors hadn't been on the shelf that long; most were dated 1942-1945 etc. Many were Lend Lease and surplus ex US service replacement.

Now rebuilding a couple old radios and your discussions most helpful. Got to look through all thos old junk boxes too!!!!!!

Best Regards to all. Thankyou.

Terry Sanford. Torbay, Newfoundland, Canada. (About six miles from where Marconi received the first Trans Atlantic wireless message in 1901).

4460. Re: Wish I Could Broadcast This

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-18 00:00:00 UTC
From: rl1856@ix.netcom.com
Message-ID: <7crpmh$8tk$1@nnrp1.dejanews.com>
Source record: 87625

I find the "liberal" reaction to Mr. Heston's speach interesting.

Rather than directly refute the points he makes, "liberals" instead attack th
person, as if he is beneath consideration because of the opinions he holds.

Based upon the "liberal" reaction, only those from the left are worth
listening to.

To amplify what "Charlie" <no@spam.net> posted, the same people that
condemned Clarence Thomas when he was nominated (based upon heresay
accounts), demanded the resignation of Robert Packwood before any cases were
brought to trial, engaged in character assasination of both Paula Jones and
Monica Lewinsky, are the same people who refuse to consider the points Mr.
Heston makes. Why, because Mr. Heston is a conservative.

The crux of the matter is that we have a group of people in this country that
hold very influential postions and feel that they have the right to tell us
what to do and think. These people have the power to control what we see and
hear regarding what happens in our country and the world.

Bottom line is this: "PC" stands for propaganda and censorship.

A generation ago, "liberals" fought for the rights of the disenfranchised and
wanted to engage the country in free speach. Ironicly, it is the
conservatives that are now champions of free speach and are waging the
battles to preserve our individual rights.

There is a lot to consider in Mr. Heston's speach. Now if only people would
leave there preconceptions behind.....

Ross Lipman

rl1856@ix.netcom.com

Oddly enough, there are also parallels in this newsgroup. Take a look at the
A Jute/ M Lefevre wars. One side telling the other to shut up (in effect),
without a proper debate of the facts presented for ALL to see.

Sorry for the ramble.

Found in warehouse! Mackay model 3020A and 3030 marine
communications receivers. Tune 15khz. thru 29.9999 Mhz via a BCD
digital lever dial. The 3020 tunes in 100 hz steps, the 3030 in 10 Hz
steps. Brand new, removed from the racks/crates after several years
of storage. These manufactured in 1982. Originally sold then for
$4000-5000 range. These described in Fred Osterman's book
"Communications Receivers Past & Present". Will supply digital
photos to interested parties. I am "brokering" them for an aquintence.
He is asking $600 each plus shipping/packing for them. Three of each
available. They look absolutely pristine!

Excuse me. I must not have seen your Net-Cop badge.

It's people like you, who look for reasons to be offended wherever they can find them, who are at the very crux of this issue. Political Correctness isn't limited to the USA. I travel extensively and have observed the same kind of nonsense in other countries. The new "whining class" proclaims some slight, real or imagined, and demands reparations or some other advantage over those who may - or may not - have been the perpetrators. Whether those reparations involve hiring quotas or suppression of free speech, they're an assault on basic liberty.

The fact that you can find offense in the term "the country" gives an excellent example. It's a pretty reasonable term. Given that this newsgroup is overwhelmingly populated by people from the USA, you might not be surprised to find us talking about things that concern the USA, in the same terms that we would use in common conversation in the USA.

However, you CHOOSE to see that term, and scream and stamp your feet, implying that we are the ugly American imperialists. All over the term "the country". Yes, it's an international newsgroup, to be sure - and somehow, all of the vast numbers of international readers found no offense in my term "the country" - all except Wammes Witkop. Congratulations. You're one in 6 billion.

The reason I used the term "whining" is because it fits precisely. And no, you will NOT tell me where and when I can talk, nor will I take the discussion to e-mail.

People like you are not worth the time or effort to educate.

Welcome to the kill-file.

Charlie, KS1C

Hi. Jeffery.

Cores are sometimes glued or waxed or otherwise locked - not always
visibly - to stop them detuning under physical vibration.

If the coil is double-ended (ie, there is an accessable opening
at the bottom as well as the top, perhaps through a hole in the
PCB) - try inserting a needlepoint soldering iron tip into the
bottom hole to heat the core, then try turning it while it is
hot. Don't actually put any force on the core with the iron,
the aim is to heat it and that's all. Obviously you will have
to be careful to avoid damaging the coil former, especially if
it is plastic.

If you can borrow a patient friend to do the heating while you
do the twiddling, so much the better. If the core is only
accessable from the top, heat it, turn it a little, heat it,
turn it a little, heat it, turn it a little until you get it all
the way out, then clean the core up before re-inserting it.

Graham - M0ADR -

Lisa, I guess you are used to a parade of operators using the same call sign.
in the LMR business. Not so in amateyur radio. You, as a guest operator in
another hams shack, should identify with their call stroke your call.

I wanted one since I was a kid and newly licensed back in 1972. Yet I never went out of my way to look for one. Finally, a few years ago I was at a used book sale here in Montreal (McGill has one every year in October) for $2.00. It was the fourth edition and has a faded red cover. I actually stumbled on it, because it was in a section that I'd never looked in before. Since then, I keep checking each year for another copy, but so far no luck.

If you look at the prices from people advertising them, they are usually sold for quite a bit.

Maybe there are similar sales in Ottawa that are worth checking. Peole donate books and the group sells them to make money, but they don't spend a lot of time pricing them so bargains can be had. I picked up a nice old book about telephones the year after I got the Radiotron Handbook, and it was about the same price.

My real point in posting is that I've read it's available on CD-ROM now. I don't have the details, but I thought it carried a US price of about fifty dollars, which is lower than what people keep advertising them for. It's not the same thing as having the book in hand, but if you just want the data, it might be cheaper.

Give me a break.

You can get MilSpec commercial units in VHF (high and low) and UHF
that are field programmable with 140 channels for less than $300 NEW
!!

$500 in "repairable" condition is a joke.

Give me a break.

You can get MilSpec commercial units in VHF (high and low) and UHF
that are field programmable with 140 channels for less than $300 NEW
!!

$500 in "repairable" condition is a joke.

DO YOU KNOW WHAT A PRC-1088 IS?

I've asked the seller to explain how a transmitter
"receives well." Ebay Safeharbor will hear about it if
the answer is unsatisfactory. It may be an honest mistake,
but we who trade on Ebay don't like being mislead any more
then those who do not.

Dave S.

4489. NEED HELP WITH NATIONAL NC300

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-19 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <19990319181956.15086.00000212@ng-cg1.aol.com>
Source record: 87504

Hi all,
I just picked up a National NC300. It's missing some stuff, tubes, dialstring, God knows what else. If anyone has a copy of the manual and/or schematic/tube layout or service notes, I would be interested in buying a copy. Gotta have the instructions before attempting to revive this dormant boatanchor... I am also curious as to how these sets were as performers. It is supposed to be a dual conversion setup, if it's anywhere near as good as the dreaded NC183D, it's a keeper for sure.
Any help will be greatly appreciated.
Thanks,
Mark S.

Michael,

I was responding to Mr. Wammes Witkop that said in his post: "Frankly, I'm Dutch. We do not like guns in the hands of citizens." Thats why my post referenced being armed. I believe our founders understood how important it was for the government to fear the people rather than the people fearing their government. Support the NRA!

Source record: 87513

To my ears, nothing sounds sweeter than a pair of 833A's modulated by a push-pull 833A modulator. My homebrew 4CX1000A linear with 4000 V works OK on SSB/CW too, but the 833A AM rig is better.

No doubt you're right. But after researching for an hour, I must decide to take this route again, can't find your direct e-mail address. No doubt that it's my deficiency, being a non-American, an alien. Sorry for not being able to find your e-mail address...
But I will not let it stand at this.

> Aside of that, it's an interesting thread. If you can somehow read it and
> find a way to be offended, it's YOUR problem, not mine. Democracies thrive
> on a free exchange of ideas. I'd not normally have responded in an
> off-topic newsgroup, but this is where the thread appeared. In fact, the
> Heston speech has been making news all over the country, so it's of some
> interest here.

Exactly my point. All over the country. What country? Not my country! Again, this is an international newsgroup. Not an American one. So *do* try to curb yourself, please, even if takes an effort.

> Interestingly enough, that's one of the features of "political correctness".
> The new whining class demands that you not talk about something, or use
> their new PC terms because they find it offensive. You might want to go
> back and read the Heston speech.

Not the effing subject! Talk whatever you want, where it is appropriate! But *do not* spam. Simple enough, I'd think.

> In the mean time, stop your whining, and don't read posts that don't
> interest you.

Nor post in the wrong places...Now, as to whining, my pen-pal, why would you say a thing like that? Because I ask you, with a joke thrown in, to adhere to the net-etiquette? Does that single me out for this sort of verbal abuse? I am disgusted with this.

> This time I won't apologize.

And I do doubt gravely you were sincere the first time.

If you care to take this discussion - what a non-word for a one-sided shouting match - any further, please do so by e-mail. Do *not*, please, abuse the newsgroups any further in this.

Once again, my apologies to the innocent bystanders. But Charlie could not go unanswered in my book. Now, *that* would have been very political correct indeed...

Kind regards to all who's time I've taken up unsollicited,

Wammes Witkop

When I was a squirt, and NYC
still had a "Radio Row" [aka:
Cortland Street] before the
World Trade Center was built,
we'd buy old Command gear from
the surplus stores. Some of the
old-timers would charge up big
caps and carefully put them back
in the bins and hang around to
watch someone get "bit." OUCH!
Show me the way to go ohm!

4514. Contemplating a homebrew AM transmitter...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-19 00:00:00 UTC
From: mom2bobcat@aol.com
Message-ID: <19990318234620.01168.00000400@ng127.aol.com>
Source record: 87556

Hello...

I've recently become interested in operating AM and have been on the air with a newly aquired Johnson Ranger. Lately, after surfing various websites devoted to AM I've started to kick around the idea of building a homebrew AM transmitter of roughly the medium power class. My question is for those of you who have undertaken such a project. What would be a good combination of tube types to use for the modulator and finals? I know there are many different combinations one could use but perhaps some of you could comment on what you think would make a good combination for a first time project.

I have a 1948 copy of the ARRL Handbook that describes a kilowatt ampilfier using push-pull 250TH's that looks easy enought to build if I could manage to scrounge up suitable components. I thought maybe I could just build an amplifier like this, connect it to my Ranger or perhaps a Valiant and forget about building a VFO, modulator, etc.

Just kicking around some ideas and would appreciate any thoughts any of you may have.

Thanks,
Brian (KB8IIC)

Hi Gang - In case you didn't realize it, each and every one of the
follow-ups in this thread are being cross-posted to rec.radio.swap
(grrrr, Dave...). Please accept this reminder of the following item
which appears in the rec.radio.swap FAQ/charter:

"PLEASE DO NOT POST DISCUSSION ARTICLES TO REC.RADIO.SWAP. If you really
must post, please do so to the appropriate discussion group. Use email
whenever possible, especially if you feel someone has committed a breach
of etiquette."

(The full FAQ is posted by myself on the 15th of each month.)

For a smoother-running newsgroup, please abide by the rec.radio.swap
charter, ok?

Jeff WH6U (rec.radio.amateur working-group)

Boy this sure tells me that you are being ID by your call sign.

S 97.3 Definitions.
(a) The definitions of terms used in Part 97 are:
(1) Amateur operator. A person holding a written
authorization to be the control operator of an amateur station.

S 97.5 Station license required.
(1) An operator/primary station license (FCC Form 660)
issued to the person by the FCC. A primary station license is
issued only to a person, together with an operator license on the
same document. Every amateur operator licensed by the FCC must
have one, but only one, primary station license. Except a
representative of a foreign government, any person who qualifies
by examination is eligible to apply for an operator/primary
station license.

S 97.7 Control operator required.
When transmitting, each amateur station must have a control
operator. Only a person holding one of the following documents
may be the control operator of a station:
(a) An operator/primary station license (FCC Form 660)
issued to the person by the FCC.

> Show me the way to go ohm!

We used some big oil filled capacitors. The capacitor was in an iron casing about a meter cube. Out of the top two large porcelain insulators about two feet tall. Those capacitors would charge themselves up from the static when they were transported. The charge was sufficient to kill. When not wired into a circuit they had a piece of wire between the terminals.

Well for a start many AM'ers have kept the poor Ranger but modified the modulation circuit. There are many mods and probably many web sites that go into how to do it. This is one path. Some just give up and construct external modulators.

Some cheat and use high powered tube guitar or stereo amps. Some of the stations doing that don't sound half bad.

If you want scratch - you can't go wrong with using 811's and 813's in RF and Audio circuits. These tubes are cheap and plentiful and most AM'er have built very nice transmitters from them. Circuits are everywhere.

Circuits from the 50's are best since you can still find low cost parts and modern substitues for them.

The problem here is not the tube but the modulation transformer (or Reactor as they say in the broadcast industry). A good one is very expensive. I assume you plan to modulate the finals tubes for best sound so you will need one.

Some hams buy dead AM broadcast transmitters just to get the modulation transformers inside them... These transmitters are designed for both postive and negative modulation peaks and many can be pushed up to 12 or 14 Khz. The smallest are about 250 watts followed by 1KW, 5KW, 10KW and so on. Many stations in small towns keep 250W transmitters as backups. Just ask around. Then again, some just retune the transmitter up to the ham bands - you can hear quite a few on 160.

Best bet is to get a nice - wide - SW RX like a HQ-100 and tune the AM bands. Listen for the best audio signals that also have a good "punch". Anyone can make a good sounding rig... but that's worthless with the amount of QRM on 160 and 80 most nights. You will have to compress your audio some way. Simply ask them over the air what they are running.

I think you will find it takes more than just the proper tubes to make it sound great. You must look at it as a "total system" from the mic all the way to the antenna...

Hope that helps - 73 - WD0HCO (on 10M AM most weekends)

Hardware store "alcohol" here in the US is called "denatured alcohol". It does not have a marking dye in the US, but probably should and is lethal to ingest. It is primarily ethyl alcohol or ethanol (which alone would be drinkable), but is "denatured' by adding some methanol to prevent its use as an adult beverage. Hence the name denatured alcohol is used for this mixture. It works well to dissolve any shellac or related compounds. The cans always have a warning label with the requisite "skull & cross bones" for those who can't read. Ingesting can cause blindness or death.

Pure ethanol is hard to get, in most states in the US you need special ATF and state permits to buy (I guess the authorities think you might use it for a cocktail or two). Pharmacies use it to prepare certain types of prescription medicines. Don't bother looking for ethanol unless it absolutely has to be pure. In this application it doesn't matter. Denatured alcohol from the local hardware store is adequate for the job.

From Jack (not Jeanette)

You might be able to find a modulation transformer in Fair Radio's catalogs. They had one unit in their most recent catalog, but I don't think that it would work in your application - (if you are thinking of plate modulation.)

Looking at my 1964 ARRL Handbook, I had scribbled in the price of a Stancor mod xfmr for a 6146 modulator at $31. A lot of dough back then.

Obviously, the modulation transformer is matches the impedance of the Class B audio modulator to the RF stage. At that time, of course, the audio stages were looking at 10,000 ohm impedance or greater. In this day and age, why would it not be possible to build an am modulator with low impedance with some of the HV transistors available. I've used these transistors (they were Delco's) in HV regulation circuits - but it was a few years back.

The '64 Handbook has about 100 pages devoted to amplitude modulation/modulators.

Lastly, while looking for a analog multiplier on the Analog Devices webpage I came across unit which would do my math easily, but could also implement a.m. modulation and DSB!

The Analog Devices chip is AD633JN. I know that you probably want to implement "big Iron", but the chip offers an easy and cheap DSB alternative -- the modulation inputs go on the X1,X2 and the carrier goes on Y1,Y2. The music goes around and around and comes out on W. -- all in an 8 pin DIP! I think that the chip is around $5. Now all you need is a big linear driven by an 8 pin chip - what an incongruity.

I just discovered that my Panoramic RA66 scope for my RACAL RA17C12 is in fact a SA77 frequency comparitor, and what is that???? I have attached a link to a few pictures of the device. If you are familiar with this unit or have any technical information about it, I would love to hear from you. If it can be interfaced with the RA17 that would be fine, if not was this part of, some "SA" series of RACAL receivers???
Thanks!!

4532. Stuck core in VFO coil HW-101

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-19 00:00:00 UTC
From: weiss@tds.net
Message-ID: <7cu0su$8ne@news2.tds.net>
Source record: 87574
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hello,

I'm trying to get my old Heathkit HW-101 operational again after years
of disuse.

After rebuilding my HW-101 VFO numerous times I finally seem to have the
mechanical stresses relieved and hope to have a stable VFO again.

But--I cannot move the slug in the VFO coil with the Radio Shack budget
alignment tools. I even sprayed contact cleaner into the coil hoping
it would loosen up. No good.
The core looks intact--but the hexagonal ID may be a bit worn from failed
attempts with bad tools.

Can anybody offer tips in getting the core free so I can adjust it and align
the VFO? I'd rather not dissasemble it again if I don't have to. :-{

Thanks!

Jeffrey N0IRR

One thing at a time.

1 Keep the Ranger,it will make a fine exciter. DO NOT build a
VFO....till much experience & patience gained.

2. Build the Amplifier, 813's, or similar.

3. Build a HUSKY power supply, or swap or hamfest for one.

4. Test (CW) to get it on the air. Neutralize finals, TVI the amp.

5. NOW build a modulator, (you have been scrounging all the time for
mod. xfmr)
You need 500 watts of audio for a killowat of rf. Suggestion of a "used"
Rock Group audio amp is possible alternative.

6 After the first five: then go for speech compression, speech
processing, etc.

7. ...by the time you have completed and perfected all of the above,
you'll be an old fart like me, and have lots of retirement time to
operate on 160 & 75, assuming those freqs. are still ham bands, or that
there is still such a thing as ham radio.

8. Never fear; in the worst case, just tweak the circuit to 11m, and get
on cb with a Rock Crusher!

Try it. You'll like it.

73,

Plum

I would have used Freeze-It type spray, not contact cleaner.

If all else fails, drill out the core and replace it.

I knew, but had forgotten, that Swan started in Arizona. There must have
been some reason why it moved to Oceanside. Walter's comments below make
it sound like it was an area conducive to technical companies. Obviously,
once you get to a certain size you want to be in an area where you can get
supplies and have things subcontracted.

I'm going to try to get around to looking through the old magazines to get
a better handle on the dates of when Swan moved to Oceanside, and when
Swan was sold.

What establishes it's value is not the asking price, but rather what someone is willing to pay. It looks nearly mint ot me, I'd be lucky to get it for $500, and it would be worth every penny.

Watch what happens when it is exposed to a large buying pool. Probably near $1000. And worth every penny to the buyer, else he would not bid it.

The 1088 has no redundant circuits in it. If you shoot it and hit a part its dead, just like any other radio.

Keep in mind the MilSpec means nothing untill you know what the spec they are refering to is. It might just be the color is proper, the mic connector is military approved or documentation meets government needs.. Heck I have milspec toliet paper and the TP is just 2 ply 500sheet roll that the vendor sells to the government at 10x the price of off the shelf items.

I have a set of five Greenlee chassis punches for auction on eBay.

Here is the URL

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=80561087

And here is the blurb:

This is a set of five Greenlee radio chassis punches, sizes 1 1/8", 1 1/16", 3/4", 11/16" and 5/8". All are in like-new condition; a couple have never been used, the others used only on aluminum. Retail on this set is about $140.00.

Thank-you.

You may have adversely affected the coil form by spraying it....however, you may want to try simply (carefully) chipping away at the core until it is finally broken up and totally removed. Then go down to local surplus store and find a coil with a similar core length and of course the same diameter...or check for one in your junk box...

Well, that will not be an easy task
provided that you can get parts. You
will have to remove the 10M trap, install
a 10M coil, I think a new bandswitch and
a few other things. You might want to
inquire with KM1H (via the AMPS reflector
on CONTESTING.COM) to see if he has some
parts. I had the necessary parts from Heath
to do it when I built my SB-221.
Good Luck - Gary KN0V

Hi Jeffrey-

I would be very careful about how much cleaner you spray into that coil.
Some cleaners will attack the enamel on the wire and render the coil
useless.

I thought it was because all or most of them were somehow related.

The guy who started Swan, I can't remember his name right now, must have lived in Oceanside. I thought he started making them in his garage.

Eventually, he sold the company. The company that he sold it to had a division (or started it after the sale) called Siltronics. Siltronics may have been more a marketing arm than a manufacturing division, since the infmaous 10-11 started out as a Swan ham rig, very briefly, and then rematerialized later as a Siltronics CB rig. Cubic was either the company that Swan was sold to, or a later brand name for the amateur rigs put out by the company.

Years after selling Swan, the original owner started a new company called Atlas. Presumably he still liked the area, so it was located in Oceanside.

I never noticed that Alda was located in Oceanside. I recall the company, but I don't recall seeing anything about it other than the ads.

Hi Randy -- Herb Johnson W7GRA had a big influence on O'side Ham radio scene. Here is a snip from the Swan Virtual Museum at URL:

http://www.pcs.mb.ca/~standard/

Swan Electronics, then Swan Engineering, began as a one man operation with Herb Johnson, then
W7GRA, building the first ten single sideband Swan rigs in a garage in Benson Arizona during the
winter of 1960-1961. At that time, the only other SSB Transceiver on the market was the well
known Collins KWM-2, selling for considerably more money. Production continued into the 1970's
with thousands of rigs being produced in Oceanside California, an affordable solution to high power
SSB transceivers .
The first ten tranceivers were serial numbered from 101-1 to 110-1, with the first nine being
SW-120's operating on 20 meters, and the tenth, 110-1, being the first SW-140, operating on 40
meters. The rest.....is history.

I believe Herb later started Atlas Radio. Swan was eventually bought by Cubic and they made Ham gear for a few years.

More Swan radio info at URL:

The TS-830S is an analog - RF tuned radio as opposed to todays rigs
which are synthezized and broad band front ends. So I suspect it may be
difficult. I believe the TS-830 had an aux position of some sort. A
possible solution is to find or build an SWL converter -- seems like
I've seen these for car radios which outputted to an AM frequency --
then tune the TS830 to the 160 meter low end. Just an idea -- never seen
one in action.

Otherwise a Radio Shack SWL radio is cheap enough. I have a RS DX-398
which receives quite well world wide.

Source record: 87462

Hi Folks,
Last night I finished scanning the manual for the National NC-183D I picked up last week. I've converted the scanned images to a couple of Adobe Acrobat files, so you'll need Adobe Acrobat Reader to view and/or print the manual. You can download the manual files at

http://www.ipass.net/~kf4kl

There are two files - each corresponds to half of the manual. Total file size is just just over 3.5 megabytes, so you can enjoy a cup of coffee or other beverage of your choice while they download. Feel free to make these files available to others. If you have a web page and want to put them there, that's fine.

Hope the manual files are useful to you. 73 and see you on the air.

Doug Hall, KF4KL

Already has 14 bids.

73 es rotfl,

Casey, KS7J

Heh heh, pretty slick (not!). Last week or the week before, I saw an early TR-4 up for auction, which was described as having 'checked out' on the seller's dummy load/watt meter: "swings out over it's rated 300W *on all bands*"(emphasis original in seller's description). Never did receive a reply to my email in which I very innocently asked how he connected his meter :)

Caveat emptor, and it's a shame to see a nice Drake hacked up by some 11M dim-bulb. And hey, here is another jackrabbit butcher, from a post to r.r.cb last July (BTW, this subtle little 'mod' probably won't work very well anyhow, and doesn't accomplish much if it did. What a waste!):

A TS830S is sa boatanchor now?

It's not a matter of clipping a diode or something. It's designed to cover
the ham bands and while it's been a while since I looked at the block
diagram, the scheme use to inject into the first mixer is a great scheme
to simplify that, but a complicated scheme if you want general coverage.

Another big consideration is that it has no AM detector, and no wide
filter unless you add one. I've never found it pleasant to listen to
shortwave stations adjacent to the ham bands with it, because of this.

Free Speakers are a threat. You should have to be registered and
fingerprinted before being allowed to Speak Freely. Also, there needs to be
limits on how much Free Speech you can dispense. For example, you should
only be allowed to Speak Freely once each month, and after having waited a

week "cooling off" period. Religion is a threat. You should have to be registered and fingerprinted before being allowed to practice your Religion. Also, there needs to be limits on how much Religion you can practise. For example, you should only be allowed to practice Religion on Mondays. People who Freely Associate are a threat...

Eewww. I don't like where this is going.

also a B.B.

Jeffery

I use to do TV repair in the days when we would use a sweep generator and realign from the tuner through the IF board then the croma board (and an audio board on ocasion). Every once in a while I would run upon the same problem. More than likely the slug has cracked (using the incorrect or worn tuning stick usualy does it) and the only solution is to (1) replace the coil or (2) carefuly using an ice pick remove the old slug piece by piece and replace the slug. I have removed and replaced slugs many times, just becareful and do not brake the wires on the coil....

Mike;
You're right. It's a beauty. Unfortunately the extensive labor that you,
or someone else, put into it to make it all clean and shiny, doesn't make it
worht the price you're asking. The number of bids you've received on it
reflect that fact.
E-mail me direct and I'll give you a serious, honest bid.

From: mmoss@mindspring.com
Message-ID: <36f4348f.1337249@news.mindspring.com>
Source record: 87481

2 meter VHF transceiver with the following crystals:

Transmit/receive
146.94/146.94
146.16/146.76
146.22/146.82
146.28/146.88
146.13/146.73
146.35/146.97
143.95/143.95
147.75/147.15
147.69/147.09
142.15/143.45
146.52/146.52
146.34/146.94

Will sell "as-is" for $20 plus shipping.
Was working when removed from service several years ago.
Have copy of manual. No mike but any dynamic mike will work with
standard 1/4 inch phono plug with PTT.

Marv

Mark,

If you check the closed auctions for the R-390A, there's one that sold for $1075 and another that netted $695. Both auctions kicked in the last day of the auction, yielding the most number of bids during the frenzy.

I agree that Mike's is an excellent looking unit but it appears like it's NIB rather than cleaned up. If it was restored, it's certainly now quite a piece of work!

Regards,

Bill

If that receiver sells for that price it will be the bargain of the
century. I would be proud to own that beauty for twice the
money. $400 is a pittance for a R390A in NEW condition.

Hi John,

If you have a panel but it is in rough shape - consider Lynn N0ALO@southwind.net. He just did a new silk screen on A Gonset panel for me- better than original and the work is extremely reasonable.

:-
:-What a SHAME that critics of the NRA so EAGERLY assume that all it's
:-about is nasty GUNS! Fact IS, the NRA is about individual freedoms
and
:-the rights of ALL, combined with access to the tools, to most
properly
:-maintain it - as outlined and established in our country's Bill of
:-Rights - the rights of INDIVIDUALS! The NRA, and its members
basically

What people fail to realize is that the "Bill of Rights" is not a document which defines rights given by the US government to its citizens. Rather, the BoR merely states for all the World to see that certain rights are inherent (inalienable) in ALL humans.

All humans, whether in the USA or Kosovo are born with the right of free speech, the right to be secure in their homes and the others spelled out in that precious document.

It is only in this country and perhaps, to a limited degree, a very few others, that our government, through the founding fathers, proclaimed that these right MAY NOT BE TAKEN AWAY! You see, God given rights may not be given by governments, they may ONLY be taken away!

We, in this country, are so very fortunate. We have had the wisdom of Jefferson, Madison, and other brave men who themselves had everything to lose and little to gain. Through them, we Americans are the most free peoples on earth.

Ask the folks in China or Kosovo just what freedom of speech is. They would look you in the eye and not be able to answer. How about the right to bear arms. We have that right (in the near term) and I carry a pistol with no fear of reprisal from law enforcement so long as I break no laws. In many other countries just having a weapon will land

you in jail, or worse!

No, my friends, the NRA is a manifestation of the BoR in its broadest meaning. FREEDOM FROM GOVERNMENT!

:-feel that without the "enforcement" capability provided by the second
:-amendment, all the rest are uninforceable when push comes to shove...
:-Sort of what would happen in civil law enforcement if we only had
:-police, but no judges or prisons to actually ENFORCE controls upon
:-those who disregard our laws.
:-
:->
:->I have to agree with Charlie. The Left has really
:->dropped the ball. It's tragic. However, we've been
:->rather quick to forget the travesties committed by
:->the two previous, republican presidents. A similar
:->litany to Charlie's of Bush's and Reagan's careers
:->would be quite impressive.
:-
:-Not sure WHERE this non-sequiter came from - Heston's comments were
:-aimed at opposing philosphies of our society, not individual
:-Presidents - did you perhaps feel a twinge of discomfort due to your
:-political affiliation?
:-
:->Speaking of other countries, is Canada hiring?
:->
:-
:-UMMmm - well, I would suppose that if you are deeply inclined to seek
:-out and become a part of a country/society more involved in the
:-idealogy that all you have, are or ever hope to be, MUST be provided
:-and controlled by a government "caretaker", Canada WOULD be a good
:-place to start...
:-
:->Sincerely,
:->

If you still have the AC-4 power supply, I'll pay you the $65.00; however, I think it makes more sense for you to pay the shipping. In over thirty years of hamming, I've never sold anything and asked the buyer to pay the shipping.

Heh heh, pretty slick (not!). Last week or the week before, I saw an early TR-4 up for auction, which was described as having 'checked out' on the seller's dummy load/watt meter: "swings out over it's rated 300W *on all bands*"(emphasis original in seller's description). Never did receive a reply to my email in which I very innocently asked how he connected his meter :)

Caveat emptor, and it's a shame to see a nice Drake hacked up by some 11M dim-bulb. And hey, here is another jackrabbit butcher, from a post to r.r.cb last July (BTW, this subtle little 'mod' probably won't work very well anyhow, and doesn't accomplish much if it did. What a waste!):

I agree. If one set of rights is comprimized, when does it stop? Geee, my company is already trying to stop the right to free speach. I got into an altercation reciently about a comment I made opposing one of the corporate scared cows. I got the usual, obligatory meeting with the 'managers". They were really laying down the law acording to them until I brought out a copy of the first ten ammendments of the constitution and proceded to read them. Wow, dead silence! Hmmmmmmmm. I asked them how much they felt violating my constitutional rights was worth to them. They became very friendly and apoligetic all of a sudden. I work for a fortune 500 company, have for 20 years, and have never seen such a degridation in individual rights as I have seen since around 1990. My point, if you do not stand up for your rights, you will loose them. I could have stood passively by and let those corporate assholes intimidate me and feel they got away with it. But, I would have set a corporate wide precident. As we all know, our legal system is based on earlier interpretations of the laws or precidents. If I would have caved in, then the company would have felt free to violate the rights of others. Now, I am making them rethink some of their policies. Now that they know they may have to shell out for a huge law suit, some of their policies may no longer look quite so attractive.

It is up to each and everyone of us to blow the whistle on violations of our constitutional rights. If we don't, and we let them get away with it long enough, then we will loose those rights. This is essentially why the NRA lobbies so strongly against ANY gun control. I'm sure that some of it makes sence to them, but if they cave in to any comprimise with respect to our rights, then again I ask, where will it stop? How long before you can't have a certain weapon, or whatever because some fool used one in a hold up? How long before you loose the right to keep and bear arms? or in my case, how long before I loose the right of free speach?

B.B.

4619. Re: HEATH VTVM meter PART NEEDED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-21 00:00:00 UTC
From: k6stu@aol.com

Source record: 87294

Hi. I have a heathkit vtvm meter that is rectangular 6 inches from left to right 4 1/4 inches from top to bottom. It will fit in a 2 11/16 inch hole It is marked 200 ua and 800 ohms.
The scales read from topto bottom:
1-1000 ohms, 1-15 vdc, 0-50 vdc, 0 center +-7, 0 center +-25, 0-15-rms ac, 0-50 rms ac.
It is manufactured by mercer electronics and has number 103 stamped on it in red.
I don't know if this is what you are looking for and I don't remember which unit this came out of. If it is what you need you can have the entire meter movement for $25.00 including shipping. If you don't need it maybe you can tell me what unit that it goes in and also HOW DO YOU CONTACT THE HEATH REFLECTOR TO MAKE A LISTING. I SUBSCRIBED TO THE HEATH REFLECTOR AND GET THE LIST BUT WAS NEVER GIVEN THE INSTRUCTIONS ON HOW TO LIST WANTS OR FOR SALES. any help would be appreciated. Thanks de Mike, K6STU

4623. Re: Why was Oceanside CA. hotbed for radio mfg.?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-21 00:00:00 UTC
From: wa6fec@nospam.znet.com
Message-ID: <36f452fb.2280899@news.znet.com>
Source record: 87298

Another interesting and related note.
The company I work for was started in Oceanside.
It was called Vacuum Tube Products. Way
back in 1946 they where making the equipment
to weld the little parts of Vacuum Tubes together.
It was bought by Huge Aircrash (Hughes Aircraft)
and a few years ago we bought ourselves from
General Motors. We still prosper under several different
company names making the same sorta precision
welding and bonding equipment. In fact I was
just messing with fixtures to mass weld getters
for some tube last week. We are, basically, still
in Southern California not too far from Oceanside.
Our division makes the equipment that the solar
cells in spacecraft are welded with. Millions of
battery packs are welded with our equipment.
Lots of LCD interconnection flex boards are bonded
with our products and so forth. We still make many
of the same pieces of equipment that we made
20 - 40 years ago. Good designs! The government
comes back and wants to buy stuff that has not been
made in decades because they too like the stuff.
The San Diego area trully is Silicon Valley South.

I'm looking for an SWTPc computer, any model. Typical SWTPc (Southwest Technical Products Corporation) models were around in the late 70's. If you have an SWTPc computer buried in the shack and are interested in selling it please email me at chipsndips@snet.net.

Alan

I'll never get to these radios. Maybe someone wants to restore them or use them for parts.

Hallicrafters S-36 receiver. Looks complete. S-meter was removed but I have it with the radio. Overall condition not too bad. Asking $50.00

Super-Pro. I'm not sure what model it is (not a 600). Has an external power supply. Might be a 200 or 400. Looks restorable. Asking $30.00.

National NC-173. Fair condition. Will need some TLC to restore. $65.00.

These things are not light! I do not want to ship them. I will meet someone within 75 miles of me (I'm near Allentown, Pa.) if they don't want to pick them up at the house. Gotta make a path to my shack. Please e-mail if interested. I can dig a path to the Hammarlund if someone needs more info on it. Thanks for reading.

4661. TDB, or ET-8019 ship xmtr?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-21 00:00:00 UTC
From: Brian Harrison <bharrison@apple.com>
Message-ID: <7d3i9l$50n$1@fir.prod.itd.earthlink.net>
Source record: 87336

Hello, and thanks for reading...

I just "picked up" (heavy!) a WWII maritime xmtr, called a TDB or ET-8019 for the commercial version which is what I picked up. Manufactured by Radiomarine Corporation of America (RCA), it puts out 200+ watts on CW or modulated CW from a pair of 813s, from 2-22 mhz...

I wonder who else is using one of these on the air, and if there have been any articles
on any mods, especially how to build up a modulator for use on AM. This xmtr has a mod xfmr installed for the A2 (modulated CW) mode. Thinking back I believe I worked a fellow using a TDB some months ago on 3579 khz, the boatanchors CW frequency. If anyone knows someone using one of these on the air, please let me know...

thanks and regards,

brian

> another hams shack, should identify with their call stroke your call.

No. Read 97.119(e) Appending my call to another when I am a designated control operator of another ham's station is only required if my operating privileges exceed his.

97.119(e) "When the *OPERATOR LICENSE* class held by the control operator exceeds that of the *STATION LICENSEE*, an indicator consisting of the call sign assigned to the control operator's *STATION* must be inlcuded after the call sign" (My emphasis)

This is only an issue if you are actually operating outside the station licensee's operating privileges. The format would be to use the station's call stroke my station call. 97.119 is full of referal to call signs as being assigned to stations.

And yes I am used to a "parade of operators" using the same call sign in the LMR business. But I am also used to a "parade of operators" using the same amateur station call sign at club stations, special events, field day, etc. The only difference between amateur and LMR is that amateurs are required to have an operator license in addition to the station license.

I have one, actually mine is an ET-8019A. I have the original manual
marked "restricted". I was under the impression that they just dumped
raw AC to the plates of the 813's for MCW mode. I also have a 1945 QST
add that shows one with the side panels removed. There are no pix's in
the manual.

They certainly were constructed using the "brick shit house" rule, all
wires run inside lead tubes. Also seems to me there was something
"goofy" about the xfmrs. 110vac @ 87 cycles or so. look at the tags.
They ran off a shipboard MG set that was dedicated to the TX.

Mine was gutted by someone who made a 160m amp out of it :(..
I was thinking about tossing an AF-67 inside as an exciter and running
the 813's linear, but want to consider class C finals and modulate
it with a pair of 811's. The cabnetry is fantastic!!! They dont make
em like that anymore. It is an interesting study in construction
diferences between wartime "war material" production which had a
specific

"design life expectancy" versus the merchant marine philosophy of "make it once, make it right, make it last forever".

There was/is someone in your neck of the woods that has/had one on the air for a while. Seems there is also a guy out of Ill. that is running a Federal who I guess was RMCA's competition at the time.

Your a lucky man Brian to be able to aquire such a "piece", and we on this NG are lucky to have people like you who appreciate it.

Source record: 87355
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I purchased a partial kit (PC board, crystals, and ICs) and built the kit about a year and a half ago. The rig has adequate sensitivity, clear audio on transmit and receive, and the receive current drain is only about 35 mA. After checking out the transceiver, I made the following modifications:

1. The author of the plans seemed to have a misunderstanding of how you measure PEP. He talked about measuring peak-to-peak voltage across a 50 ohm resistor, squaring it, and dividing by 50 to get PEP. He left out a factor of 8. At the time I bought the kit, it was advertised as having 5 to 8 watts output, but mine would only put out about 5/8 to 1 watt PEP. I used a voltage doubling transformer between the output transistor and the filter to bring the PEP up to about 3 watts with a 13-volt supply.

2. The VFO uses a type 2 (red) toroid core for the inductor. Substituting a type 6 (yellow) core (and adding a couple of turns to get the same inductance) improves the temperature stability by a factor of about 3.

3. The VFO inductor is very close to the T-R switching relay and experiences a slight inductance change due to the stray magnetic field. To minimize the amount of frequency shift between transmit and receive, it was necessary to rotate the inductor until the best position was found.

Possibly some of these design flaws have been corrected since I built my kit.

What a surprise. I have one (fourth edition) I bought new when I was in high school (between 53 and 57) for about $15. As an engineer I still use it from time to time for reference. Guess I will take better care of it. But then, an engineering handbook these days goes for about 100 to 150 so I guess it's is still cheap. It has 1482 pages BTW., it was a fairly bright red new. Now it is still fairly bright but, the cloth is wearing out at the edges. It is interesting, that transistors were beginning to be around in the mid 50's, but there is not a mention of them or semiconductor in the index.

at one time that was also the case in amateur radio -- you had to get a call
for every station location.

However, at some point in the past, things like secondary and club licenses
were pulled and the call you used was the call you were assigned for your
home station. this is probably where the operators started thinking of calls
= name...

4685. Re: Radiotron Designers Handbook

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-21 00:00:00 UTC

Now that you mention it, I notice mine is a brighter red on the front and back than on the spine. Obviously, it was on a shelf and the spine has had to endure sunlight over the years.

But wasn't $15 a lot for someone in high school in the fifties?

My first ARRL Handbook was the 1971 edition, when I was 11. It had a cover price of $4.50 in the US. It had a nice red color too. I used it quite a bit, and then a few years later gave it away, since I'd picked up subsequent editions. In more recent years, I've regretted giving it away, since it was my first. Last year, I found the same edition for twenty cents at a Rotary Club "garage sale". The red is red, and it's in much better shape than my original copy was when I gave it away.

I must have been given the money to buy the original. I can't remember whether I thought $4.50 was lot back then or not. However, I can remember looking at ads for electronic and radio books and wishing I could buy them.

As for transistors, my 4th edition Radiotron has a 1952 copyright, so it might have been a bit early. Wasn't there an article in QST in the early days about how transistors were only a fad and they wouldn't last, or something to that effect? (Or maybe it was a mythical comment.) I can imagine someone saying that at the time, since the early transistors were so limited. If the comment was representative, an author might not want to put transistors in a book that must have already been a standzrd, prefering to wait until they were more definite.

I suggest you look for the RF-2900 and 4900. They have a fluorescent display that uses less power than the LED display in the 2800/4800. This means longer battery life.

SWL wrote:

The following manuals are offered for sale. Prices include postage.
Please contact me at kq4by@rocketmail.com to hold for you. I will ship
upon receipt of payment.

73,

Larry Keith, KQ4BY
KQ4BY@rocketmail.com

1. Swan Model 250 Operation and Maintenance Manual (Copy). Fair
condition but it is all there. I think this has been hanging around the
shack a long time! $8.00

4. Electron Tube Test Set TV-7/U Operation and Maintenance Manual
(Copy). This does not contain the tube settings data. This is the
operation and maintenance manual only. $10.00

5. Radio Set SCR-274-N Handbook, Maintenance Instructions, TO
12R2-3SCR274-
2 Revised 25 July 1956. 206 pages. $25.00

6. Radio Set SCR-274-N Handbook, Operating Instructions, TO
12R2-3SCR274-1,
Revised 25 July 1956. 28 pages. $15.00

7. Radio Set AN/PRC-47 Marine Corps Stocklist. 10 pages. $5.00

10. Frequency Meter, AN/USM-159, Operator's Manual, TM 11-6625-486-10,
April
1962 (Copy) 27 pages. $10.00

11. Heathkit Model SB-220 Linear Amplifier Assembly Manual, very good
condition. $25.00

12. Heathkit Model SB-100 SSB Transceiver Assembly Manual, fair
condition (cover is frayed and loose) but it is all there and not
written on. $15.00

13. Heathkit Model IM-105 Volt-Ohm-Milliammeter Assembly Manual, Very
good
condition. $10.00

16. Heathkit Model HW-32A 20 Meter SSB Transceiver Condensed Manual (no
assembly instructions), copy by Heathkit! $10.00

17. Heathkit Model HW-22A 40 Meter SSB Transceiver Assembly Manual, good

condition. $15.00

19. Heathkit Model GC-1A Mohican Communications Receiver Assembly Manual,
fair condition. $12.00

20. Heathkit Model DX-35 Amateur Transmitter Assembly Manual, fair condition.
$15.00

21. Heathkit Model DX-35 Amateur Transmitter Abbreviate Manual (no construction instructions). 11 pages (Heathkit copy) $10.00

22. E. F. Johnson Operation Instruction Manual, Johnson Viking Matchbox Antenna Couplers. Covers Models 250-23, 250-23-3, 250-30, and 250-30-3. 11 pages (copy).
$10.00

23. Radio Receiver, Model SP-600-JX, Handbook, Service Instructions, TO 31R2-4-17-2, 4 September 1952, 64 pages. (Copy) $20.00

24. Hammarlund HQ-129-X Amateur Communications Receiver Instruction Manual
and Technical Specifications sheet. 20 pages. $20.00

25. Hammarlund HQ-110A Communications Receiver Technical Description and

Operating Instructions. 25 pages.(Copy) $20.00

26. Hammarlund HQ-110 Communications Receiver Technical Description and Operating Instructions. 21 pages (Copy). $20.00

27. Hallicrafters Model SX-96, Mark I & IA Communications Receiver Operating
and Service Instructions. 18 pages (Copy) $20.00

28. Gonset G-66 and G-66B Mobile Receiver Instruction Manual. 13 pages, Fair condition (covers are loose and pages are stained. But, it is all there and perfectly legible). $20.00

29. General Electric Receiver Type ER-9-A Instructions, Instructions for Low-Pass Filters Type KY-4-A, Interconnection Diagram and Schematic Diagram for the receiver. Approximately 10 pages, fair condition (schematic has been taped and annotated).
$10.00

30. Electro-Voice Service Manual for FM Stereo Receivers Models E-V 1180, XAM
4TA, FM Stereo Tuner E-V 1159, XAM 5TA, and Stereo Amplifier E-V 1122, XAM
3TA. Approximately 12 pages (Copy) $15.00

31. Eico Model 625 Tube Tester Instruction Manual. Approximately 12 pages (5 x
8.5), (Copy) $10.00

32. Eico Model 625 Tube Tester Construction Manuals. Approximately 12 pages

(Copy) $10.00

33. Drake Model TR5 HF Transceiver Instruction Manual. Approximately 30 pages
(Copy) $20.00

34. Drake Model R-4B Receiver Instruction Manual. Approximately 40 pages.
$25.00

35. Collins Automatic Antenna Tuner, Models 180L-2 and 180L-3, Service Instructions, TO 12R2-4-8-2, 12 Dec 1994, Approximately 225 pages. And, Overhaul Instructions, TO 12R2-4-8-3, 30 Jan 1995, Approximately 55 pages. $30.00

35. Amdek Model Video 310/310 12" Video Monitor Owner's Manual. $10.00

36. Allied Radio, How to Build the Knight VOM. 17 pages. $ 10.00

Hello Harvey,

It's a fine point, but these are all thyratrons, not thyristors. The latter are semiconductor devices. Most device names that end in "tron" mean a hollow-state device. Some examples: Pliotron, kenotron, magnetron, decatron, rhumbatron, klystron, megatron, ignitron, and of course thyratron.

Contact cleaner is the wrong stuff. Try WD-40. If that doesn't work,
try a bit of heat from a hair dryer or heat gun (don't overdo).

Used to have the information to the Drake reflector, but changed hard
drives
and lost it. Anyone with information on getting on the Drake reflector
please
let me know. Thanks.
Randy

4700. Re: LOOKING for Crystals.

Newsgroup: rec.radio.amateur.boatanchors

Source record: 87375

There are small lots of hamband crystals (mostly ft-243 style) that
are sold on Ebay from time to time. Might be worth a look to see if
the prices are OK for you. I know Ebay isn't a popular topic here at
times, but I've bought some tubes & stuff reasonably. It depends on
how badly other folks want an item.

4701. FS TR4CW Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-22 00:00:00 UTC
From: chashugg@earthlink.NET
Message-ID: <36F60BBF.7C989CBF@earthlink.net>
Source record: 87376

Nice Drake TR4CW transceiver for sale, includes AC4 power supply, MS4 speaker, all cables and original manual, the transceiver and power supply have been fully checked out and work perfectly. The AC4 has been recapped with Drake parts. Cosmetically, the TR4CW is nice, has original paint with some scuffs and scratches, not bad, front panel is perfect. The MS4 speaker cabinet has been repainted, front panel is perfect. $375 plus shipping, Charlie, K5MBX

4702. For sale : Transmitting tubes/roller inductors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-22 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <36f5f1d8.21428541@news.pipeline.com>
Source record: 87377

Following is available:

RCA roller inductors, approx 9" x 5" x 4", value of approx 35 uh,
shaft extends 3/4" front front panel. Silver with double rollers.
3 available @ $50/ea

Tubes (empty state devices):

Amperex 4-250A, European equivalent - 1 avail - used - $25
Penta Labs 5D22/4-250A - 1 avail - used - $50
RCA 4-250A - 1 avail - used - $50

Eimac 304TL - 1 avail - used - $50

Western Electric CW705A/VT255 - 1 avail - used - $10

Hytron 801/VT62 - 4 avail - used - $10/ea

United 813 - 2 avail - new except for test scratches - $30/ea
National 813 - 3 avail - new - $40/ea
RCA 813 - 4 avail - used - $15/ea

RCA 814 - 1 avail - new - $25

RCA 828 - 4 avail - used - $15/ea

RCA 833A - 1 avail - used - $50

RCA 8008 (mercury vapor rectifier with same ratings as 872A but
different base) - 5 avail - used - $15/ea

Philips 5894 - 1 avail - new - $25

Also, a selection of large wattage (100 watts or greater) wire-wound,
plug in resistors (they look like cartridge fuses) - various values -
INQUIRE.

All tubes are guaranteed 30 days. Shipping is extra - probably about
$5 to $10 per tube. Most of the used tubes are used only in that they
were kept in a test jig.

I'm SLIGHTLY flexible about pricing.

4703. Re: Radiotron Designers Handbook

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-22 00:00:00 UTC
From: sb@zip.com.au
Message-ID: <36f6312d.1092732@news.zip.com.au>
Source record: 87378

Just as a matter of interest the Radiotron Designers Handbook was an Australian publication though a US version of the 4th edition exists. The earlier editions are much thinner. I have a copy of the 2nd edition of 1935 (price 1/- = 10 cents US) and it has only 60 pages. The 3rd has about 240 pages and was published in the early 1940s.

It was produced under the auspices of the AMALGAMATED WIRELESS VALVE CO LTD, who made Radiotron brand valves, as a useful publication for their customers and grew into the fine textbook that the 4th ed represents.

The 4th ed fetches anything from $A10 - $A40 when they crop up at collector sales here ($1A = SUS0.63), depending on the weather and the buyer.

Source record: 87390

This set was manufactured shortly after
WWII. Around 1947-48. It suceeded
the model 1-10. It could be used as a
converter if fed thru a receiver such as
the Hallicrafters SX-100 and using the
SX-100 IF system. the HFS could also
receive FM by slop detection.
Its principle circuit is a super regen circuit.
Your best bet is to get hold of a manual
for it. National supplied an external
power supply for it.

Randy,

How could a seller set a fixed price that included shipping and be
fair to everyone? Shipping costs vary by distance and method of
shipping. I've sometimes offered to pay shipping on a light item
at a fixed rate, but for heavy items I must first find out where the
buyer is to quote a fair shipping price, else I'd have to set my price
at the max. rate, which would not be fair to those near my QTH.

Price + shipping, especially on heavy items is the norm.

Dave,

I doubt he was being dishonest. My guess is he has no idea what
he is selling, or hears voices, or just goofed on the text, or all of
the above. I'd almost say that if someone bought it based on the
info in the posting, they got what they deserved, hi!

Someone else posted that they saw a 2-NT there with similar/same
text.

Like the poster said. What Mil-Spec is referred to is very important. Do
you know
what Mil-Spec you want.

MIL-STD-12
MIL-STD-100
MIL-STD-167-1
MIL-STD-740-2
MIL-STD-810
MIL-STD-1397
MIL-STD-188-118
MIL-STD-901D, & many more

Lots of specs to manufacture a piece of equipment to. Which one would be
the most important to you. How about MIL-STD-901D, Shock and Vibration?
What part of the Spec was used to test. Was it Grade A, Grade B? With
out
the whole test report it becomes useless information to say it is MIL-SPEC

radio.

KF4YYA

Source record: 87398

FS SWAN 500C Includes: 117XC Power Supply/speaker;Cubic/Shure Mod. CM17L Mic; Mod. 405X Crystal controlled oscillator; WM-3000 SWR/PEP reading wattmeter; mod. FP-1 hybrid phone patch. All in very good to excellence condition. The 500C has 8950 finals and comes with a spare set. Has just been completely gone through-complete re-alignement-receiver and tramsmitter (by ex Swan tech).This is a very nice and complete Swan station. The 500C showes a little paint wear around the Band switch and the "Tune;CW etc." switch.Ware on paint is on the lower cover, not on the front cover which is in exelence condition. Have all manuals,execpt for the WM-3000. Also the mods to change back to the 6LQ6 finals.(12 back to 6 volt fills.) 475.00 U ship from 92104. Any Questions? Please E mail to: KE6HLW@aol.com

The S-2 was the double crystal bank, and then the S-3 had some circuit improvements for better operation, based on the KWM-2. Prices are all over the map. $300 to $1000. Maybe even $250 for a ragged out but operating S-1. Check DejaNews for recent postings for prices.

Message-ID: <36f6d52d@news1.us.ibm.net>
Source record: 87411
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

The 51J-3 brochure shows a optional cabinet, but no speaker. Cabinet similar to 75A-3, but all openings near the top, hand hold and 18 slots in a rectangular pattern. May have been used for the 75A-1. I have seen "matching" rack mount speakers, but you must realize that in the typical government collection site, they fed audio switches from the 600 ohm connections and then on to recorders, demodulators, etc. If you have more than 2 receivers in operation on different circuits, speakers will drive you crazy. Hence the name:

You can but you also have to install coils and caps in 3 different sections of the band switch it I remember right. I think it would be easier to get a crystal cut and try it out in the 15 meter position if you can get it to load up and recieve well you can build a relay crystal switcher and use the 15 meter position.

A common failure of the R390-series radio is the
3TF7 ballast tube that drops the 24 volt dc supply
voltage to the filaments used in the PTO oscillator
and BFO oscillator tubes.

There is a simple mod to replace the hard-to-find
3TF7. e-mail me if you get one of these sets
and I will send you the info ..

Au contraire! You are much safer dealing with an ebay vendor than with any private seller! The ebay vendor has his/her reputation at stake, as you have the opportunity to leave feedback on the transaction for all to see forever. The occasional newsgroup/swaplist seller has no such motivation to make you happy with your purchase. As an ebay purchaser you have the opportunity to essentially blacklist the vendor by leaving negative feedback on them.

Less than straight forward? What seller in his right mind would NOT want to get the highest return for his goods? Fair value is set by the free market. Don't think everything is high priced on ebay----there are great deals there sometimes!! My experiences there as a buyer and seller have been much better than local or newsgroup purchases have been.

However, I do agree that proper etiquette dictates that the "FA" should always be used instead of "FS" on auction link ads. Auction link ads that are not properly headered even annoy ME!

Regards,

Tim VE7SEZ

Recent selling prices from over 4700 sales of over 1400 different pieces of test equipment.

Please don't start a thread about 'that auction'. Use this data for whatever reason you want.

It's always nice to know if you are selling way too cheap or buying way to high.

I've included a link to another site that has a large collection of usenet and swap page asking prices as well.

I am interested in the purchase of a pair of meters for an R-390A. I would prefer originals (the ones with the radium scales), but would consider reproductions if they are of VERY good quality.

Please reply with details and price.

Thanks!

Mike, WB5MYY

I have more confidence in a seller that states his price. The auction sellers are essentially saying they want to get the most they can regardless of the fair value of the item. I suppose this is the capitalist way but it seems less than straight forward to me. I also suspect that you're more likely to get the shaft from an auction deal.

Larry, You are correct. This requires 24-28VDC, not 13.8VDC as I indicated below. The 13.8V supply is model MP-1 or something like that.

This PS runs the KWM2 and the 32S-x series transceiver/transmitter.

Hi,
Looking for the old Turner +3B microphone (of 1970's CB vintage)
or the Turner CS-1 custom special mic. This is for a nostalgia ham
station that I'm putting together. Does not have to be perfect,
just working and looking reasonable.

Check your top shelf -- probably been collecting dust since the
1970's, right?! Let me know condition and price.

thanks,
Joe K7JOE

A few observations on e-bay:

How do we know the seller is not bidding against himself,using another name and address,to raise the price?

What reputation does any e-bay seller have to protect? If he gets caught,he just makes up another name for the next deal.

In response to the "what seller in his right mind" question,there are actually people who are not out to get more than the fair value of an item. Apparently you're not one of them.

VE7SEZ wrote:

Source record: 87256

I am nuts about unbuilt vintage tube-type kits. I'd like to try and
preserve as many as possible - I'm not a re-seller or dealer, just
another happily irrational boatanchor fanatic.

I'm looking for tube-type unbuilt ham radio and hi-fi kits
from Heath, Eico, Knight, Johnson, Dynaco, Scott, Fisher, etc.
Will pay serious cash or trade other vintage gear (or duplicate kits).

Example - will trade late model 75A-4 for an unbuilt Heath
RX-1 Mohawk receiver. $100 reward paid for info leading to
acquisistion of an unbuilt Mohawk.

I have in beautiful conditionn a I-177 Military Tube Tester. This is a wonderfully preserved unit that works very well. It comes with the original tube chart for the settings also in good condition. The paint is good and there is no rust or dings. The faceplate is like new.
If you want a very nice dynamic mutual conductance tester, this is the one. $175 JPG available on request. 73 Chris VE3NGW/W4 Florida

Hi OM

I am looking for the modification details for converting the FT101B/FT101 series of TX/RX's for 6146B's.

An article in Radio ZS (journal of the SARL) August 1998 describes the details. I would appreciate a copy of the article or the info.

The British version was called "Radio Designer's Handbook"
by F. Langford-Smith. It is still available as a copy of the original
1953 4th edition with 1498 pages at
'Reed Educational and Professional Publishing Ltd"
ISBN 0 7506 3635 1 (1997) for a price much lower than the today's
price for an old original copy.

The 3TF7 is NOT hard to find. Fair Radio has all the 3TF7s you'd ever want at about $17 each. The best mod for this is to jumper the filament in the 3TF7 and replace both the BFO tube and the PTO tube with 12BA6's (they were 6BA6s). Easily reversed and doesn't hurt the functionality of the receiver.

Anyone out there seen the imported Star SR700E or ST700E Receiver Transmitter pair? While didling through my QST CD rom set I ran across a "Recent Equipmen" review on the pair, August 1967 QST. Looks like a fairly nice pair of old tube radios. Interested in hearing about these and if I could find a pair at a price that less than the original selling prices (somewhat less) I might be interested. BTW the RX sold for 400 dollars, the TX sold for 550 dollars. Did the Japanese Star company evolve into something else?

Tnx for the read

73

Surplus Sales of Nebraska, 1-800-244-4567
UG636 (C male to BNC female) $20.00 (ouch!) last time I bought

What does the break in switch do?

Allows operation with a transmitter

> How do I field adjust the carrier Level meter.(It doesn't act like an
S-meter)

Better check the manual (Fair Radio sells them: 419-223-2196 ask for Dave)

> I hooked the IF out to my SE-3 Synch. Detector and the AM is better than
my WJ
> HF-1000 .

It ought to be!

> Tuning the radio is sometimes on and somes off. What am I doing
wrong.(Zero
> Adj???)

Calibrate it to see if that helps. Set freq to a zero setting, ie.:
8000mhz. Engage dial lock.
Set function switch to CAL. Turn BFO switch to On. Turn KC knob slowly
until you hear a null.
The set is calibrated. If the PTO is out of adjustment the frequency
reading will still be off. If it's
4-5 KC's off you'll need to decide if you can live with it. To fix, see the
manual :-]

Message-ID: <19990322203153.10655.00000326@ng-fb1.aol.com>
Source record: 87426

Per the Collins Pocket Guide...the 51j series used a 270G3 - plain, no sound deadening material inside, no logo on the outside, looks like the speaker matching the 75A2 except has 3 holes in each side for the mounting ears for rack mount (like crazy George has seen). Hard to find, I haven't seen a Collins speaker go for less than a couple hundred bucks lately and they go fast. Good Luck &73, Scott

A chronic problem with 390s is that the carrier level meter zero adjust pot gets dirty. Either replace, or put a 10 ohm resistor in series with it to get the wiper to a clean spot on the pot.

Also this may be indicative of AGC problems. One of mine had leakage through the mechanical filters which put positive bias on the AGC (ouch!). Cure was a .022 600V cap in series with the "primary" of the mechanical filter circuit.

This question shows, once again, the value of reading one or more of the ham radio hobby publications. See the regular advert in QST:
"CRYSTALS: FT-243's for QRP, vintage equipment made to order. 160-2 meters. 4 stamps or $1 for catalog/circuit package. C-W Crystals, 1714 N. Ash, Nevada, MO 64772."

> >identifies the station, not the operator. I have always found this to

Ah while a call sign may identify the station an Amateur Station is very personalized, its a hobby and the call sign was earned by the work of an individual, as a hobby the individual who earned the call sign is usually the one using the "station" the majority of the time (except for say a club or repeater). Of course its not really even an individual station as we take our Callsigns mobile or portable with us and even our fixed station is usually in our personal residence. So its pretty easy to see the call sign being linked with the individual, besides there might be a dozen John Smiths or Jane Thomas's but the call sign itself is unique (and as stated above usually is linked to the single individual who holds it).

Sometimes calls have sentimental value, for example I don't really think of myself as N9KKP which I got when I failed to renew my license on time during a period of inactivity. Thanks to the Vanity program for a measly $13 I will (hopefully) receive my original Callsign which I earned through a lot of hard work when I was in High School a big accomplishment for a 14 year old kid. I think that's the other reason for personalizing our Callsigns, its like a fond memory, I have thousands of conversations as Steve some good some for work, some not so good. But all the conversations I've had with my callsign since it was a hobby and for fun have been mostly pleasant (similar to my IRC nickname, it helps make the hobby relaxing leaving some of the day to day issues of ourselves a bit behind).

Regards,
Steve
N9KKP

Who the hell are you anyway, I've never replied to anything you ever posted, but I will now, bear with me and accept my apologies other NG users.
I made a comment, I didn't ask for anyone's opinion, including yours Gary. That's what's wrong with this world today, too many people sticking their nose into other people's business. And no, I don't know how to activate my filter, wasn't aware I even had one. But seeing as how you know it all oh wise one, how about "elmering" me on this subject. And then I could filter out your posts. And yes, I can skip over threads such as these, and I don't read them. But I have one question, what in the hell do boatanchors have to do with shooting people?
You don't know anything about my Real problem, or my Willpower, or my inner "need", or even if these things exist. And you really should have

sent this post to me PRIVATELY, but seeing as you apparently have the "need "to waste NG space,(and you've proven that) it's fine by me. I'm not going to make any assumptions about you Gary, but I don't need to, I can tell you're a jerk. I may be white but I'm not stupid.
Apparently there are others that agree with me, seeing as how you had the need to state "private email from those complaining about my posts" blah blah blah, so forth and so on.
Thanks(?) for showing me the error(?) of my ways, now go and take one(or 100) of your blood pressure pills, Keeps Jacking 6 Queers, or you're gonna spontaneously combust. 'Nuff said? BTW, I will accept private email from anyone, even you, especially if it keeps this kind of BS(this reply included) off the NG's. You may not get a reply, but if you were to take the time to write, I'll at least be a man and read your message.
I apoligize to the other NG users that read this, but I really don't have to take this kind of unsolicited crap, and you don't either.
May God bless our servicemen and women, who at this moment are doing what is right on behalf of those who cannot. My heartfelt prayers are with you.

<Remainder of senile rant deleted...>

Why OM, I'm TRULY chagrined at your distress, and your need to even go
so far as making *multiple* posts to as broadly as possible
distribute your anguish... I'm SO distressed, I may even burn my
license, toss out my PC and chop down my tower... NO!, I'll do THIS
instead (watch carefully now...) and just filter YOU!

Here's how it's done :

<FLUSH!>

THere, now, as far as MY PC is concerned, YOU don't exist anymore...
But I'm not REALLY sure you ever did anyway... BUT, *do* rant on
endlessly for the benefit of the others - I'm SURE they are quite
amused...

Gary - KJ6Q

From: kf4kl@ipass.net
Message-ID: <36fb5f0a.203460533@DOUGHALL>
Source record: 87199

Hi folks,

I have scanned the 30L-1 manual and converted it to an Adobe Portable Document Format (PDF) file. I also scanned the schematic onto four sheets and combined them into a PDF file. If you need a 30L-1 manual (or if you'd like a decent copy to work with so you won't spill coffee or beer on your original) download these files and print them out. You can download the 30L-1 manual and schematic files from

http://www.ipass.net/~kf4kl

You'll need the Adobe Acrobat viewer to view or print these files. It's available free from http://www.adobe.com

The manual itself is 1.7 MB, while the schematic is 144 KB. Email me if you have any questions or problems.

Enjoy,

Doug Hall, KF4KL

Seems to me that Americans WITH GUNS are the ones who took Hitler off your backside and kept the Iron Curtain out of your backyard. If we decide to no longer cover your butt, can you? How is your marksmanship? Are you good enough to take on an all out aggressor in a day? Don't knock the force that gave your freedom or we might stop buying tulips.

Message-ID: <19990324070442.29008.00000837@ng119.aol.com>
Source record: 87210

When I got this tube tester it was still sealed in the box but it was the inside only with NO case. The person that I got it from had about 20 units and they were all the same. Inside Only with no case. He said they were left over stock from a goverment contract. I picked up a junker TV-7 at a hamfest just for the case, and I put my new inside unit in the old case.

Source record: 87213
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.equipment

Looking for Drake T-4X transmitter parts (not for T-4XB or T-4XC): need a front panel, a complete set of knobs, VFO knob skirt (with the 0-10-20-30-40 markings on it), rear cabinet feet, and maybe a meter face.

I got this transmitter at an auction (estate gear). At some time in the past, someone tried to clean the front panel and knobs with some kind of solvent, and they ruined the paint and the knobs (all pitted and badly discolored). I don't know what they did, but they sure made a mess of it!

73,
Dean / K5DH

Source record: 87226
Cross-posted to: rec.radio.amateur.equipment;,rec.radio.swap;,rec.radio.amateur.boatanchors

Drake experts:
I have an opportunity to obtain a TR7 (not an "A") in good shape, with power supply and book(s). It does not have the CW filter or noise blanker. Price unknown at this point.
Questions:
1) What does it take to make this thing into an "A"? I am guessing at: noise blanker, aux 7 option and CW filter.
2) About how much do these pieces go for these days?
3) Can it be put on the WARC bands without a redesign?
4) The owner seemed interested in trading for my mint Kenwood TS820S with CW filter. Is this a fair trade? I'm guessing the 820 is worth $350.
Thanks
Bob

Don't know how to activate your filter?

Don't know how to skip over a post when the subject is CLEARLY
indicated?

I suspect your REAL problem is that you haven't the WILLPOWER to avoid
the very subject you CLAIM annoys you,

AND that you suffer the inner "need" to play "newsgroup censor"...

Is this a moderated group? If it IS, the moderator is capable of
controlling posts - if not, then let your conscience - and your
keyboard - be your guide.

As for ME, all private Email from those complaining about my posts
here on this and similar subjects, will be "deleted unopened"...

'Nuff said!

I made a comment, I didn't ask for anyone's opinion, including yours Gary. That's what's wrong with this world today, too many people sticking their nose into other people's business. And no, I don't know how to activate my filter, wasn't aware I even had one. But seeing as how you know it all oh wise one, how about "elmering" me on this subject. And then I could filter out your posts. And yes, I can skip over threads such as these, and I don't read them. But I have one question, what in the hell do boatanchors have to do with shooting people? You don't know anything about my Real problem, or my WILLPOWER, or my inner "need". And you really should have sent this post to me PRIVATELY, but seeing as you apparently have the "need " to waste NG space, it's fine by me. Go to Dejanews and see if there are any posts from me attempting to be a "newsgroup censor".
Thanks for setting me straight, Keeps Jacking 6 Queers.

4868. Rechargeable Alkaline batteries question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-25 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@digital.com>
Message-ID: <01be76b3$4e53f060$4701c510@utovandongen2.uto.dec.com>
Source record: 87087

Recently I obtained a 1970's military A13 HP. It came with two original rechargeable Alkaline batteries 12 volt 2,6 Amp-hr. When I charge it with a 12 Volt Nicad charger with 0.5 amp it starts blowing bubbles from different cells after one hour. I've never used rechargeable Alkaline batteries (didn't knew they existed) and don't know how to treat them. Can they be revitalised like NiCad's or refilled. Every cell has a nipple like a lead-acid battery but there is a warning on the battery not to unscrew it.

ok i have a Gonset communicatorII! now it is in pretty bad shape. the
power supply in it will not fire up at all without having some arching
in one of the 6x4 rectifier tubes.
now the case is all beat up. and i have absolutly no documentation on
this rig! does anyone out there have any documentation on this rig or am
i wasting my time trying to restore this radio. let me know please!thanx

I have some broadcast equipment for sale. may need minor work...
or may not.
prefer pick up due to size of equipment...OR...I will meet you
with in 40-60 mile radius of Jackson, Mich.....

But, shipping can be done on most items, you pay for materials
(I buy new boxes & packing material) & shipping.

Console:
Collins stereo console...needs minor comedic touches...weight approx 135 lbs.
asking $250 with original manual...big VU meters..

Sparta 5 channel $50, *missing 2 pots and jack from front panel not the main
panel.
*(headset volume & monitor volume & jack) w/PS,

cart machines...$50 each...(10 to choose from)
cart machines...record/play units..(2 only)..$75
Carts available for above...$4.00 each with purchase of machine...
These are the smaller carts...

QRK 3 speed turntable w/ arm & pickup & pre amps...$100

Phaser Parts (10 coils & 3 turns counters)..from Gates 3 tower phaser...
good 160 phased tower project...$300 for all...
(thats figuring 10 coils @ $25 each and 3 counters for $50 (new they are about
$100 each)....

radio shack 35 watt amp...like new..MPA-46 p.a. amp...mic 1&2, aux/cd inputs and
3 band EQ...$40

new sealed in bags 2-pin mic connectors...4 available $20..

BSR 10x1 audio routing switcher...10 in to 1 out..push button selectable..
2" rack unit...$80

100TH w/ socket...$50

Beckman 5424-16 preset counter w/ original manual...needs 4 tubes..$75
rack unit...

HQ-129xr..RACK mount receiver..could use alignment..but works close as is..
has resilk screened front panel..non-original knobs though...$140
will throw in a manual copy also..

JAN CRC 832A tubes..have 11 nos in boxes...$30 for all...

tentec nos 241..osc. in the box never used..$30

SyQuest EZ-135 scsi external drive w/cable($30 new never used)
...$75 these store 135 mb on a disk...

TCS 12 Collins restored xmitter & TCS 13 Hamilton receiver (needs restored)
w/ power cable and manual copy covering most TCS units..$200

Palomar FC-40 SS frequency counter...digital..bnc on front, so-239's on back...
ac/dc operation....$50

Technics SL-PG440 CD player...has many features not on consumer units..
$75...

Sansui..AU-517 integrated amp & TU-217 AM/FM matching tuner..both
are rack units..tuner works fine...amp needs some attention in the
preamp section..65-WRMS per channel...$200 for pair...

Bogen Challenger CHB-10A...small pa style amp..$25...

email me if interested in any of the above, or call at 517-789-8702...
if you get no answer I may be on the internet
if you think my prices are out of line, Lets talk!!
I don't bite.

I think some official at the ARRL(a left over spark op?) said that these new fangled Transistors were to complicated for Hams. I know that they were too expensive. A Raytheon CK 722 was US$ 15 in 1952.

I would like to find an old TenTec IV noise blanker board.
Would purchase whole rig if price is right. Might need for parts someday.
Plan to use rig as a mobile in my truck. I have mod'ed the vfo to digital lock
with a readout so would make a nice mobile if didn't lack the blanker.

Uses a single 5CX 1500A @ 2500\3500 Volts (comes with a spare!thats a two lifetime supply) CW\SSB for 4000 watts PEP input, up to around 2400-2600 out(into a dummy load of course).Standard Henry Console look but RF deck sets straight not tilted up....paint in Very good condition...a few scratchs but no biggies...could be restored to new with only touch up!! This unit must weigh near 250 with two big transformers and two smaller ones....Continuous coverage from 3.5 to 30 Mhz with NO blank spots....It is located in Odessa, Tx and Im willing to deliver it within 500 miles for $250..or 50cents per one way mile.....Will sell the unit and hand deliver and set up for $2750.. plus the shipping charge...some trades considered.... Would swap for a late nice 775 Icom or what have you....I can only confirm two sales of these units in the last 6 mos...one for $3500 and one for $2900....If you think the price is outrageous #1. Dont bother to tell me....#2. Show me a cheaper one, though it wont change my thinking....I also need a nice Mid sized automatic & air car, for my book keeper at the conveneice store, to drive....So....SOMEONE WANT A BIGGIE? Thanks 73 Murray K5MDM Picture on request...

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a Hallicrafters S-38 EB (the AC/DC model).

It appears the previous owner thought that the radio would work better if he/she applied AC to the headphone jack on the rear of the unit.

It does not appear to have caused the radio any major harm but there is (was) a resistor(?) across the headphone jack which is now mostly vaporized.

I'm looking for a schematic or source for info on what this resistor was and also how the headphone jack is wired in so that I can check if anything else was damaged.

If I can buy a manual, get a copy of the schematic or other option, it would help me get this radio fixed up.

Thanks, Mark K3FWT

Hi Jason -- I have an S40B an oldie but goodie. There were three models
-- S-40, S40A, and S40B.

You can download a freebee manual at URL:
http://www.hallicrafters.org/manuals.htm

Or buy one for a nominal price at URL:
http://www.ac6v.com/pageaae.html

The SWL Receivers Book lists all 3 models as common -- not rare. I
bought an S-40A in 1949 for $89.00 -- for todays prices see URL:

http://www.ac6v.com/pageswap.html

Hope you can replace the transformer.

Idiot, you're doing it again. Not content to have cross-posted a message that had nothing to do specifically with amateur radio in the first place, and seen it turn ugly because it had nothing to do with amateur radio, you are now cross-posting a second time because you didn't like people criticizing you for doing it in the first place.

I have a choice whether I want to read political diatribe. I can very easily find plenty of newsgroups set up for that. I choose not to. I expect to not find them in the amateur radio newsgroups, especially when the threads ignore the fact that not everyone here is American.

I shouldn't have to filter to keep your junk from my view, because I've made the decision to not read it by not reading the newsgroups where it belongs.

Why don't you just stick to rec.radio.swap and sell your junk there, instead of turning newsgroups intended for discussion of specific amateur radio related topics into your personal advertising space. Since you have no consideration for that in the first place, I'm not surprised that you'd think nothing of posting your off-topic political junk here.

I always remembered the comment as being from someone at the ARRL, though it was before my time. I know I've heard people repeat the comment, but I think I might have even come across it in QST somewhere.

In some ways, the comment isn't too hard to accept. Those early transistors, like the CK722, had terribly limited capability. The fact that they weren't good at RF might explain a lot.

Interestingly, the transistor is now older than the tube was when the the transistor came along. People weren't sure what to do with the tube in the beginning. The transistor, on the other hand, came from deliberate work I thought. And the whole field of electronics and radio had developed tremendously from the time the tube was new.

I'm still puzzling over how people had the sense of exploration to "invent" radio in the first place, so I'm not surprised that there would be a lag between the invention of the tube and a practical use for it. But you'd think by the time the transistor was invented, people had realized that things would improve quite rapidly.

The change from spark to tube seems like a very large step; the change from tube to transistor seems relatively small.

The right to have a gun can be very practical here in the wild west. After the recent infamous O.J. trial, when the L.A. riots started, the cops just backed out and abandoned the citizens. Those with guns got some respect and saved their businesses. Those without were burned out...

Hi Tony,

I beleive you are a bit ill-informed regarding the early days of WWII and the virtually complete lack of small arms in the British Isles. Litterally THOUSANDS of sporting firearms were donated by concerned American gun owners so that the Brits could defend themselves from Hitler. Seems the government there had curtailed individual rights to bear arms, with predictable results once the bulk of thier "official" arms were lost in Northern France, Singapore, etc. While it wasn't a huge number and they went to Home Guard units, these arms freed up a bunch of Enfields, and a couple of extra divisions made a BIG difference early on. Enough to turn the tide? Probably not, but it's just another example of why an armed citizenry is the best guarantor of Freedom.

Bob - its probably a fair swap, although you might be a little low on the value of your 820. You see these routinely going for 500 to 600 bucks with supply and in excellent shape. I bought a beater with noise blanker, aux7 board, 4 filters and matching tuner for 300 at Dayton last year. Go figure. You will have a heck of a hard time buying a blanker, but the other filters surface in the 40 to 60 dollar range on the Drake net quite often. The TR7 ain't real stable, but the receiver is solid. You can use it on AM for SWLing by putting a low ohm resistor across one filter position - the selectivity is then the 9 khz of the roofing filter - this was another thing they did in the TR7A - if there's no QRM, it sounds great. There is a "cut one circuit board trace" Mars mod thar enables general coverage transmit, therefore no need for an aux 7 board unless you want to receive below 1500 khz or want to switch directly to the WARC bands. Hope that helps. Scott

I have a Variac variable transformer for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=82618541

Here is the description:

This is a Superior Electric (Bristol, Conn.) Powerstat variable bench transformer rated at 10 amps, 0-140 volts output. Model is 3PN116B, 50-60 Hz. 120 volts input. In excellent condition, used but not abused. Useful for dimming lights, powering up old tube radios in a gentle manner, making a foam cutter for model airplane building, and many other uses. Retails for around $200.

Closes 3/31/99.

Thank-you.

Source record: 87150

Hello all,
I have some National NC57 parts available. This is due to the tremendous good luck that I have had looking for parts and parts sets here on the newsgroup. As a result of the responses, there are now 4 running NC57's that were previously junkers.
As a by-product, I have some leftover parts that someone out there may need for their ailing set. If anyone is in need of parts for their sick NC57, let me know by e-mail what you need and if I can help, I will.
These parts will NOT be offered up on ebay (enough said there).
Once again, Thanks to all of you who responded to my pleas for parts & parts sets..
Kindest regards,
NC183d@aol.com

Hi Jr,

Lack of education is hard to cope with. However, as long as you do not realize that the first military bombing of an open - read: undefended - city occured in the Netherlands, May 1940: the city of Rotterdam, the discussion ends. That sort of warfare will not be opposed by hunting guns. I might mention the Grebbeberg as well, look it up. Or ask me for details.

Sorry, group, I've laid low for days, waiting for the sentiments to blow over. But frankly, I've had it with the half-educated nonsense here.

Hi, D.S.,

1) The Low Countries, as you put it, are a rather strange combination of both the Netherlands and Belgium. Two different states. that fared differently in the second world war. We share a language - Belgium has also French and German. Nothing more.

2) 'Scuse me?

> Right on!.....and look what happened to the Low Countries in '38 thru '41.

Both Belgium and the Netherlands were invaded in 1940. The Germans were expelled from both countries in 1944 and 1945.

> Some people never learn!!!

How very true...

Sorry group, but I've taken all the abuse I could. Laid low for days, but some people just have to voice unfound opinions.

Kind regards, Wammes Witkop

Dear Gerald,

Do I understand correctly, that freedom means no comment at all could be allowed? Free speach only to those of American Blood? Otherwise, you wont't buy Tulips anymore? I don't give a hoot wether you buy tulips, honestly. But I do know, I'd like to present you with some. Only where... Oh - here's the clue: butt. Bend over. They'll stay fresh longer...

By the way, it seems you did forget quite some other nations involved in WWII. English, French, Greeks, Polish, Soviets, even Dutch. To name some. Sorry, Australians and all the others...

And sorry, group. I've taken all the abuse I will, publically and privatly. I waited for this to blow over, but stuff turns up here and in my mailbox that I will not stand for. Anti-military does not mean I will accept endless abuse!

Kind regards and excuses to all others,

Wammes Witkop

4900. SB-200 Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-25 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <36f9ab5e.271337915@news.supernews.net>
Source record: 87154
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Help!!

I've got an SB-200 and am unable to get it to load up on 10m. It used to work on 10m, giving me 500w out or so. But something apparently has changed in the last few months, and I'm having a heck of a time figuring out what is wrong. Let me say upfront that I don't know much at all about tube amps, but I can read a schematic and have a good general idea of how it all works...

The problem is that I see an SWR of > 3:1 on 10m at the exciter, and I can't get even 100w output from the amp with 50 to 100w input. The internal tuner in the exciter can't get a better impedandce match at all. I've tried different lengths of coax, etc to no avail. It appears that the SWR is fluctuating very rapidly - the SWR meter in the exciter (FT-920) is an LCD bargraph, and I can see it going back and forth between say 2:1 and 5:1 or so, very very rapidly.

When the SWR at the tuner is lowest, I see a plate current of about 100 ma and a grid current of 10ma or less. But less than 100w out for 50 watts in, and the tube light up bright red in a heartbeat.

I've just installed a brand new matched pair of Svetlana 572Bs, and can load 700+ watts out on most of the other bands; the old tubes still loaded up to around 500w on all bands but 10m. So I'm fairly confident that most of the tuner works fine.

I've replaced the 10m input coil and the 68pf capacitor on the 10m input network, to no avail.

I've also tried disconnecting the capacitor on the input network - that gives a much better match at the exciter, but I reach a point as I increase input power where the SWR suddenly skyrockets, the exciter cuts back it's output power to protect itself, the SWR comes back to normal and the cycle starts over again.

Beyond that, I have no idea where to look to find the problem. It seems obvious that there's one or more components somewhere that are affected by 10m operation, but I am stumped.

Any suggestions would be greatly appreciated. Please reply here and via direct e-mail if you would as I can't get to the newsgroups as often as I need to.

73 & thanks in advance.

Robert
Try SchematiCAD (SJMTech)
I thinkk its $20.00 for the full version.
It has valves and you can make your own symbols.
The shareware version does not allow saving of files.
I did a search on download.com or shareware.com
There are one or two others.
Please let me know if you have any trouble finding it or if yoyu find
anything else interesting.
Don Vosper

Bob,
I had the same question. I am now using Isis Lite from
www.labcenter.co.uk.

I paid 20 pounds for it [around $30]. I does a lot more
than I want [all I wanted was to draw schematics using tubes].

I'm pleased with it. Paying via credit card [if you choose
to do the honest thing] can be done over the phone
with a US credit card.

The only snag is the in this version you have to create your
tube symbols but that is easily done and you can create them
in the style you like best.

You can download it an try it before paying .

Good luck
Martin

For Auction: Military R-390A/URR 500 kHz to 32 MHz Radio Receiver

An absolutely beautiful R-390A military radio receiver. Excellent condition, Super clean, Shines inside. Everything works. All bands checked.

Motorola manufacture, contract 14-PH-56. All 4 mechanical filters are Collins manufacture. Includes meters, and top, bottom, and tuning cover. Also comes with spare set of NOS JAN 5749W tubes.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=80702369

Listing includes large detailed pictures.

If the tubes are running red at that power level, then your efficiency must be pretty low. This is indicative that something in the output network is not tuning properly.

The only part of your description that doesn't fit together is that you are getting red anodes with only 100 ma plate current??

Stop spending time on the input side and look at the ouput tuning and loading area. Are the 10 meter bandswitch contacts OK? Also, I once had an SB-200 problem with similar symptoms and it turned out to be the plate RF choke had many shorted turns from being overheated. I had to rewind it with #26 enamelled wire. But, the problem mainly showed up on 75 meters, as I recall, because of the lowered inductance.

Hope this helps,

Al - K8EUR

The Orcad website has, in archive, their DOS version of schematic capture (SDT). One drawback... it can be a real challenge to print from Windows, especially since it is a DOS program and the printer drivers are all obsolete (unless you hv one of those printers).

the orcad SDT library editor is extremely easy to use.

food for thought.

Forced to sell part of my extensive collection. I would rather avoid the nonsense on E-Bay, so please reply to me directly if something interests you.

National NCL-2000 Amp. Used (2) 8122 tetrodes designed for SSB service. Puts out 1400 watts on 220 VAC with current tubes. Will include a spare set of tubes and a copy of the original manual. Cabinet is in good shape, as is the front panel. Inserts on the 4 large knobs are tarnished. Price is $650. Would prefer pickup pr deliver within a hundred miles of Houston TX. We'd have to discuss shipping.

Drake TR4-CW with RIT. One of the last made. Part of the lettering on the side mounted headfone jack is worn. Front panel is perfect, knobs shiny and stiff, as new. 2 small hairline scratches. Operation on transmit and receiver is 100%. Included is RV4-C remote VFO and AC-4 power supply. They're in the same condtion. Original manual is slightly worn. Price is $600. Prefer pickup, but shipping is certainly possible.

Drake R4-C. High serial number with nylon gears. Has properly installed Sherwood engineering power supply kit. This is truly necessary to keep heat and hum down. Gain falls off after an hour's use, affecting AGC operation. Doubt it's related to power supply mod. Noise blanker, but no extra filters. Price is $150. Shipping is possible.

(2) Drake MS-4 speakers. Fair condition, speaker is OK on both. Cabinets were never repainted. Prices have shot up on these for some reason. Price is $45 each, and shipping is no problem.

Hammarlund HX-50 SSB transmitter. Output power vaies from band to band, and VOX doesn't function. Does work on all bands. Physically, in very good conditon. Cabinet and front panel restored by an expert collector. Price is $150. Prefer pick up, shipping is possible.

Heath SB series station. SB-303 receiver and SB-401 transmitter. Dial needs some work on receiver. Transmitter appears to function normally, with slightly lower ALC readings than expected. Transmitter has full crystal pack for self contained operation. Includes original (but well worn) construction manuals, cable set and original Heath microphone. Price is $150. Same terms as above.

I'm NOT a dealer! Locating to the West Coast on a personal move. I hope you can add some of these items to your collection.

73,

Alan

Then, don't.

I need not remind you that it is your history, not their's. They don't remember it, you do. Naturally, those with less experience will resent those with more, because they FEEL that they have a lot of it (rightly or wrongly). Bad enough that someone lives by their FEELINGS. Those who quickly react, though, aren't worth your time and energy to make a reply. They are intractible, and are only trying to get your goat. Please, believe me: I speak from too much experience. Do not waste yourself on the boobs.

Bottom line: Ignore the ignoramus.

LOL

But really, Kitchen Table Amateur describes me quite well. When it comes to this stuff, I mean. By day, I am a Systems Engineer for a major IT outsourcing company. I have been working with computers since I put the lollypop down. Tube sets, though, are a whole different ball game. Who understands inductance, or impedance, or capacitance? Who the heck invented all this stuff, anyway? I am at my wits end trying to comprehend the schematic for my Howard 418 (sans Perm-A-Matic). All those coils and grids and gangs!

And what fun trying to figger it all out.

Have at it, people. We are lurking.

4924. HOW TO FILTER OUT POSTS YOU DON'T LIKE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-25 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36FA8B8E.DB7C4642@ix.netcom.com>
Source record: 87178
Cross-posted to:
rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.audio.tubes

(This is for Netscape 4.5 and later only--
Other news readers will work in a similar fashion to this.
I don't know Internet Exploder and
hope you MS fans will provide the much-needed primer.)

Although I clearly didn't want to start a thread, I'm responsible
for a big, off topic one. This is my attempt to help
people who either cannot or will not simply ignore
posts they say they don't like, be they off topic or auction.

This primer will show you how to "filter" messages so that
you never see them and are therefore not tempted to "click"
on them. I do this to filter out posts about YaeComWoodies,
about which I have not the slightest interest.

1. Open your news reader. Select the newsgroup you want to filter.

2. On the upper tool bar, click on "Edit."
Select "Message Filters..." from the pull-down menu.

3. Click the "New" button. This will open a window called
"Filter Rules." Give your new filter a name.

4. Examine the boxes. You have many options to delete, mark
or otherwise automatically handle message from selected
persons or about certain subjects. For example,
you can tell your new filter to delete any messages
from "CBSambo" or "the cuban." You can also send
all auction messages to a special folder by filtering
for "FA:" or "ebay."

5. When finished building your filter, click "OK."
Restart your internet software and your new filters should
be ready to remove your temptations.

You can create multiple filters for each newsgroup if you wish.

I hope this is of some help and invite others to write short
primers on how to do this for other news readers.

Kind Regards,
David Stinson

A TR-7 with all the components that comprise a TR-7A, is not a TR-7A.
You will be money ahaead to buy a real TR-7A...if you hurry up.
Drake is the next upcoming supply and demand market to be exploited.
Any vintage TR-7 with a little work and patience can rival todays radio,
less the gadgets.
Jim

For sale: 10 ft. dish antenna (C band expanded radar mesh) and polar mount, 2 linear actuators, C band feedhorn, C/Ku band feedhorn, C band Uniden receiver (synthesized) w/remote, C/Ku band receiver (synthesized) w/remote, several C band LNB's (one is 40K), several Ku band LNB's, cables and who knows what else. All should be functional. Pick up only in South St. Louis County. I need to make space, so no reasonable offer refused. "Reasonable" has to exceed the scrap value of the aluminum or it's off to the recycler...

Source record: 87037

I have three mint, relatively rare Swan accessories for sale as a package to anyone who would like to add them to a collection or put them on line. They are:
1) 405X xtal oscillator, useable with 400/350/500 series transceivers to provide fixed-freq. and out-of-band (e.g. Mars) capability.
2) FP-1 phone patch. Rare as hen's teeth, and in beautiful cosmetic condition. Also works great!
3) SWR-1 swr/relative power meter.

As noted, all in top condition cosmetically and otherwise. All come with documentation. $75 for the set + shipping. Jan N0JR

4934. WTB TenTec IV Noise Blanker board

Well, what is it then? Is a BMW 740 with all the components that
comprise a BMW 740 actually a cheese sandwich or perhaps a BMW 739.5?
:=)

Seriously, other than the "A" after the "7" (which for argument's sake I
could fake if I wanted to), besides serial nos., how would I know the
difference? And why would I care?

Thanks .. Grant

Bob,

The matching speaker is a 270G__, I think 1 or 2. It is the same as a 75A-3 speaker except it has a couple of holes for mounting rack mounting hardware on the side/front of the speaker. There is a picture of one in the Collins pocket guide.

Source record: 87046

I need some help with this rig....just got it today...after 4 hours of burning in...(rig sat for years).....tuned and loaded into dummy load....fine so far.....switch over to tune antenna.....POOF finals went! I opened up the cage and put the only other two 6HF5 I have...(stole them from another rig) and discovered that the 4MC coil form was melted and warped! Obviously this was old.
I need help with getting 6HF5 tubes and that coil! For those of you have Swan 350 schematic it's L402 (80M coil) on the schematic, one end going to 20 M coil other end to antenna with one tap. This one may still work, but the form is no longer even.
WHY DIDN"T SWAN make these damn coils on ceramic forms!?? instead of open air coils?
Also need help with repair of Swan 500CX..replace one rf choke bad..all tubes voltages ok, but this rig will not tune or load into dummy load on ANY band! Any suggestions? PA tubes are questionable, but on adjusting bias I can get them to conduct current up to 250MA.
Thanks for any help!!
PLEASE REPLY MY EMAIL ADDRESS

Hi,

I own a HRO 500 and I love it! I don't have the VLF Preselector or the matching speaker (another rare bird). I bought mine for $250.00 at the Slidell, Louisiana Hamfest last year The only thing it needed was a nice fresh coat of paint on the cabinet. I know I bought mine for a steal, don't know the real value the the radio though.
Sometimes I don't know which radio to use, the R390A or the HRO 500.
I love them both!

Gentlemen:

I have been reading articles regarding the poor audio power performance of the VIKING II modulator section. I have a VALIANT II and it seems to be capable of >100% modulation without modification. I guess that I am assuming the audio sections are similar. The VIKING II is a newer unit. Can I hear for someone with experience with both units?

My only modification to the VALIANT II was to regulate the RF final screen bias to 180 vdc.

Thanks in advance

Roy

Re-chrome?? You must have the wrong knobs for your unit. Thats
an aluminum cap on the knobs.
Caveots-follow the manual for tune up and DO NOT over drive in
SSB mode. My meter barely moves with max output in SSB.
Mike

Dear Mr. Stiglitz, and to those following this thread.
I mean no offense to anyone's personal beliefs (nor do I mean to violate anyone's privacy), however I would like to share a few facts that bear relevance to this discussion.

1)Americans did join the militaries of Canada, Britain (and other free fighting forces in Europe) before the U.S. became officially involved (in both World Wars). Many of these people did bring their own weapons with them, typically handguns to be used as a secondary weapon. While this may have been "officially" frowned upon, most of the allied nations allowed it since they all (minus the U.S.) had a shortage of weapons, which brings me to the second fact:

2) After the British defeat/rout at Dunkirk, the British military was in short supply of weapons (having left most of them on the European beaches). Thousands of americans donated their personal weapons to the British government, as part of a U.S. Gov. sponsored weapons drive. While few of these weapons made it to the front lines in Europe and Asia, they served proudly in the British home guard and reserve/training units, thus freeing-up the purpose-built military arms (made in the US, Canada, Australia, India and the UK) for front line soldiers

3) The pilots and air-crew members of the U.S. military are still allowed to carry personal pistols as part of their survival gear, assuming the firearm meets a few minimum standards.

Now allow me to shift slightly into a philosophical mode:

If a people are disarmed, their freedoms are kept about only through the good will of those who would otherwise take them. I'm sure (ok, its actually just an opinion) that every Albanian in the Balkans wishes he or she had a firearm right now.
I believe it was Jefferson who said "Our freedoms are protected by three boxes: the soap-box, the ballot-box and the cartridge box"

Sincerely,
James Jewell

I think George is right about Yaesu. My Dad and I used the receiver for years. We had gone into NYC intending to trade an HQ170 for a Hallicrafters(SX115?) to get better frequency stability for SSB. Side by side comparison with the Star and we thought we were listening to a different band - the Star was that much more sensitive. Nice gear driven VFO. Selectivity was variable, as was the BFO, at the 60KHz IF. Never used the transmitter but I think they could transceive together.

FC-901 500w Antenna Tuner

Yaesu FC-901 500w amateur radio antenna tuner. Matches the classic FT-901dm and FT-101zd radios. A very nice accessory, and in very good condition.

Another side thread: I think Swan may have inadvertently started the TRW Swap Meet. Years ago, Swan had a periodic "swap meet" , where they sold items they no longer needed. One of the TRW radio club members, Bill Dews, and some others went down there. They liked the meet, but it was a long drive, and Bill said, why don't we have a swap meet? One was started, and in their peak days, regularly drew people from Santa Barbara to Tijuana (sp?). People may have come longer distances, but I regularly saw attendees from these cities.

Ivex Design International http://www.ivex.com has a program called
WinDraft Schematic Capture. An evaluation program that allows 100
items (I think) is available as a free download. Tube symbols are
included, but leads must be connected as if the tube socket were used,
so you probably can't put the grid connection at the left side and
plate at the right. Be sure to download the documentation. A few
symbols are shown at the right side of the screen, giving the
impression that not many are available.

That's kinda what Gary was infering (about you)

including yours
>Gary. That's what's wrong with this world today, too many people
>sticking their nose into other people's business.

You set the example okay... I mean so we'll know what it looks like when we
see it!

And no, I don't know
>how to activate my filter, wasn't aware I even had one. But seeing as
>how you know it all oh wise one, how about "elmering" me on this
>subject. And then I could filter out your posts.

You 'can' filter his post's... All you have to do it jump aroung them. I on the other hand am having to drop to the bottom of the list to 'find' the thread, as it contains some ongoing dialog I am interested in.

And yes, I can skip
>over threads such as these, and I don't read them.

You don't read what? "BUSTEEEEEDO"

But I have one
>question, what in the hell do boatanchors have to do with shooting
>people?

Well I think you have just won the "Pinko Liberal Award!" Where in this thread have you seen anyone carry on the dialog that pertains to 'shooting people.' My threads, and those of other's have by and large been contained to the subject of our "Inalienable Rights." Please don't attempt to 'group' individuals into what is obviously "your" 'contentious' predisposition on the subject of guns, when the subject matter is deeper than either guns in general, or as you put it, 'shooting people.'

Oversimplification of the 'subject at hand' is boorish at best.

I have a quantity of vacuum tubes that are surplus to my present needs
and therfore are offering them for sale as listed below.

new old stock
Jan 5719 Simalar to CV 4008
Triode / A.F. Amp
Sharp cut off
Heater 6.3 V @ 150 mA
Max Plate voltage 165V
Max plate current 3mA
Max plate dis. 0.6 W

Typical operation
Plate 150 V 2mA
Gm 2300 umho Mu 70
EIA Base 8DK
Pin - 1 Grid
Pin - 3 Heater
pin - 5 Cathode
Pin - 6 Heater
Pin - 8 Plate

Most are Philips ECG
some Sonotone marked as JOZ 5719
all white box new old stock
115 pcs available
priced at:
From 1 thru 4 tubes $2.50 each
From 5 thru 9 tubes $2.25 each
From 10 thru 49 tubes $2.00 each

Westinghouse brand
Jan 7645
Twin tetrode
Usable as amp to UHF frequencies
Sharp cut off
Heater 12.6 V @ 300 mA or
Heater 6.3 V @ 600 mA using center tap
Max Plate voltage 250V
Max plate current 40mA
Max plate dis. 3.5 W

Typical operation
Plate 200 V 20mA
Gm 10500 umho
EIA Base 9HL

Pin - 1 Grid #1
Pin - 2 Cathode - Common
Pin - 3 Grid # 2
Pin - 4 Heater
Pin - 5 Heater
Pin - 9 Heater center tap
Pin - 6 Plate # 1
Pin - 7 Screen common
Pin - 8 Plate # 2

75 pcs available
priced at:
From 1 thru 4 tubes $7.50 each
From 5 thru 9 tubes $6.75 each
From 10 thru 75 tubes $5.00 each

Philips / Sylvania brand
Jan 5933 WA
Ruggedized tube
military replacement for 807
Pentode
EIA Base 5AW
Pin - 1 Heater
Pin - 2 Grid
Pin - 3 Grid
Pin - 4 Anode
Pin - 5 Heater
Cap Plate

200 pcs available
priced at:
From 1 thru 4 tubes $8.00 each
From 5 thru 9 tubes $6.50 each
From 10 thru 75 tubes $5.00 each

Tube Prices F.O.B. Edmonton Alberta
In U$ Dollars for CDN multiply price listed X 1.5 round down to nearest cent.
All taxes and shipping Extra / Will Quote at time of inquiry
(est 5.00 for first 1 - 4 Tubes add 0.25 for each additional tube)
Tubes sold on a first Contact basis
if intrested Email at once to check availabilty and reserve available tubes
reservations limited to 30 days unless special araingments are made
All payments By Postal or Bank Money order in advance of shipment.
Will entertain offers and quantity discounts on mixed lots over 50 tubes.

>And what fun trying to figger it all out.

First thing to remember when working on the kit powered up,
"keep one had in your pocket at all times".
That way if you gotta go you'll know it is still there.

You won't go back in a hurry for another 250 VDC nip.
350 V is beginning to get serious.
I think the worst shock that I ever had was a crock clip to the forehead with 400 VDC, RF and Amplitude Modulation whilst standing in a puddle wearing leather shoes. That was 50 years ago and I still have a little mark where the spark was drawn.

>Have at it, people. We are lurking.

I suggest a visit to the Science Museum, take a look at the section that has a demonstration of all of the basic electrical units. A model of Faraday's first electric motor consisting of a wire dipping into a pool of mercury with a magnet in the centre of it. Fascinating stuff, I could take my bed to that section.

Hi Jason.
I have the data on the Comm II's.
Need to know what band it is for.
If it is in real bad condition you might just want to sell it as a parts rig.
Let me know what you need.

Well, I have to agree they were not citizens, they lost that freedom when they became GIs. I believe that when they went through basic traning, it went faster because most had guns as citizens and were already proficient.

Just my 2 cents worth, so please don't be embarrassed, unless you don't know what your talking about!

Jerry

...Only the serial number can make it a TR-7A. But the radios are identical in performance if you have the same options and late revision boards.

Here's an obscure one for the REAL TR-7 experts: Was any TR-7 or TR-7A ever shipped with the band-1 low pass filter installed? I've always assumed it was only included in the commercial versions destined for maritime service. I purchased the components and installed it in my TR-7. Needless to say, if you have to ask me what it is...

Hello to everybody!

About 3 weeks ago I found on the InterNet an announcement of a British (I think I'm sure) firm which announced a Plessey HF receiver to sell. Price was arround 700 Br. Pounds. Unfortunatly I lost this adress. Can anybody help?

All the best from Vienna.

I don't have patience to fix these so they're up for sale!

Swan 350 - needs new final coil..has new finals (someone overheated the
final at one time....warped the coil. cabinet 8/10
Swan 500 - works but S meter not working right (could be somewhere in RF
gain or AGC circuit) cabinet 9/10
Swan 500CX - will not tune or load any band...receiver fine. cabinet 8.5/10

Come with power supplies for each one.

Offers for the lot!! Cash or trade for one GOOD working rig!

There is a mod that completely overhauls the Valiant's audio section (Electric Radio) and it makes a dramatic difference! Frequency response is better, the envelope is symmetrical, and it approaches 100% modulation at rated power. The useless clipper section is deleted, entirely. I read that the V-1 and V-2 can't modulate at 100% at rated power, even with mods due to the inadequacy of the mod transformer. As I recall, one can do about 80 watts and get 100%. There's a big difference twixt the V1/V2 and the Valiant series.

Some paint stores can make an electronic color density reading of a sample (abt 1" sq.) and can mix and put in spray cans for you. Walmart can read and mix but don't put in spray cans.

ACE Hardware (and no doubt others) sells a nifty little CO2 powered sprayer for $10 bucks or less. I took in a piece off a BC-610 exciter chassis and they color matched the paint *exactly* with latex paint. After masking off the good original portion of the painted chassis, the CO2 sprayer was used to apply the latex. The latex flows on and 'cures' smoother than does the enamel spray. After the latex dried it was extremely difficult to discern where the new and the old painted portions were.

Since age twelve I have owned both ham radios and guns.

Naturally, I'm of the opinion that I have a right to own both, inasmuch
as I have never abused either.

Now there are Newsgroups for Hunting, Guns, etc., and Newsgroups for
various aspects of my ham hobby.

Which of my hobbies do you think, this newsgroup should best represent?

Well, don't answer that, as I'm going to another group, maybe Skydiving,
maybe Square Dancing, maybe Salmon Fishing,
maybe Stop-watch Repair, ...in short...
anyplace but here.

...hmmm, yuh suppose theres a group on Newsgroup Filters ????

Happy Hamming!!!
..and Gunning!!!

Found a circuit diagram for a Motorola VHF receiver. It looks very much like AN/PRC-10, but covers the larger range. I am not certain about how much similar the receivers are. The Motorola receiver uses almost the same modules and valves, it is marked ISSUE F Part No.63E845727. 'AN/PRC-10' transceiver seems to have been manufactured in Sweden (which is a non-NATO country) as Ra105, perhaps the technique is not as secret as we were told when I was in the army 32 years ago....

I would be interested to modify the selectivity using readily available 455kHz ceramic filter. Circuit says "permakay wave filter", but 50kHz bandwidth may be somewhat too much - even for the antique 6m net.

if you convert it (ctrl-insert/ctrl-v) to bitmap or gif file it
shouldn't be a problem. I use powerpoint to draw circuit diagrams, but
would like to have orchad if an inexpensive version was available for
win98. Powerpoint has the advantage that you may make your own symbols
and make the connections as you like, but win98 version seems not as
good as previous win3.11 and win95 since it is a limit how small
symbols you can make

I have no 1st hand experience with both units, but I know that some of
your assumptions are wrong. The Viking II is older than the Valiant
II by approximately 5+ years. The Viking II was introduced in the
early 1950s and the original Valiant came out about 1956, and was
updated as the Valiant II around 1960. I know the Valiant had two
6146 tubes as modulator finals while the Viking II used 807 tubes as
modulators.

5037. FS: HT-32

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-27 00:00:00 UTC
From: kx4r@atl.mindspring.com
Message-ID: <7dilpeago1@camel19.mindspring.com>
Source record: 87078

Still thinning down the collection here.
I have an HT-32 that I won't get around to. The
transmitter lights up when turned on and
that's the extent that I have checked it.

All original knobs and very good front panel.
Cabinet could probably stand a repaint
although it's not too bad .

Price $125 plus shipping from 30178
Would prefer someone around the Atlanta area
to p/u but will ship if necessary.

Please reply direct to kx4r@mindspring.com

Its no joke. Upon completion of your $500 unbuilt heathkit HW-8 qrp cw
transceiver, it will be valued at $80 to $100 American.

Brian

5039. Auction: Variac Variable Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-27 00:00:00 UTC
From: JBR1@my-dejanews.com
Message-ID: <7disv3$2jm$1@nnrp1.dejanews.com>
Source record: 87080
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a Variac variable transformer for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=82618541

Here is the description:

This is a Superior Electric (Bristol, Conn.) Powerstat variable bench transformer rated at 10 amps, 0-140 volts output. Model is 3PN116B, 50-60 Hz. 120 volts input. In excellent condition, used but not abused. Useful for dimming lights, powering up old tube radios in a gentle manner, making a foam cutter for model airplane building, and many other uses. Retails for around $200.

Closes 3/31/99.

Thank-you.

Ok,
let's lay this one to rest here. The issue at hand is not weather or not we should be able to have guns, but weather or not we are going to keep giving up our Constitutional rights. As American citizens, we are endowed with certain rights as set forth by the constitution of this country. A constitution that was written by men who had far more intelligence and forsight then any of the morons presently in power today. If we give up ANY of these rights it sets the stage for the powers that be to pick and choose whatever right they want to violate in the future. Where will it stop? Will you soon have to file an environmental statement to fart? Will you be thrown in jail for having any dissenting opinion? How long before we end up nothing more then a cowering mass at the mercy of the govenrment's every whim? If you look at a lot of what has been tried, with respect to censorship and the like, you can get an idea of the supressive agendas a lot of polititions (and their wives, Hello Tipper G.!) have. No, the issue here is not wheather or not to bear arms, the issue here is weather or not we are going to let our constitutional rights be eroded away for the sake of expediency. Anyone who believes unarming american citizens is going to cure all gun related problems is a fool. Criminals and bad people will always be able to procure weapons. It will just mean that joe average will no longer be able to buy a shotgun or hunting rifle at the local Wal-Mart.

Well, if we take away the 'cartridge box" how much longer till we also loose the 'soap box' and the 'ballot box"? I believe that was his point, and is mine.

Message-ID: <922640112.931.54@news.remarQ.com>
Source record: 86896

Atlas 350-XL

All solid-state HF SSB/CW transceiver with 350 watts PEP input and a receiver with a -135 dBm noise floor and better than 0 dBm third order intercept. Features input preselector, RIT, 500 Hz cw filter, notch filter, automatic noise limiter AND noise blanker separately switched, and separate power level, mic level, and alc controls. CW has extremely smooth full break-in. Both sidebands available on all frequencies with separate 2.7 KHz usb and lsb crystal filters.

This set includes all three WARC crystals although alignment is not optimized for those bands; the 350-XL does general coverage with auxiliary crystals except for a 5-6 MHz guard band.

Also included is the built-in DD6-XL digital dial dot matrix LED display, the model 305 built-in auxiliary VFO, and the 350-PS power supply rated at 14 volts at 32 amps.

Both radio and supply are in particularly good clean shape with no obvious wear, dings, etc. It's a late model, bought in 1978. Comes complete with original manual and copies of invoices on all service performed.

Price $550 plus shipping if needed from Plainfield, NH 03781, figure 30 and 37 pounds for shipping weights.

Please use e-mail to respond; don't use the newsgroup.

tnx ex 73,
-Pete

FS...Johnson Viking II...its complete, but I don't have the
inclination to plub it in...$100.00
Hallicrafters ..HT-37 its also complete, but once again I
don't have the inclination, nor the strength to mess with it..$100.00
Hallicrafters..SR-160..this is a transceiver of the 60-s
..cover 80-40-20 meters..this one seems to work well when I tried it
out about two months ago..the original power supply comes with it, but
the previous owner has replaced the original power t-former with a
larger size one, that functions beautifully, and runs cool as a
cucumber, but its larger than the original ...$125.00 (nice shape)

I have the manuals for the two Hallicrafters...These units are PICK-UP
only as I have no intentions of crating, or lugging these things down
to have them crated..that includes the SR-160, as the power supply is
very heavy..Who knows, someone who wants to buy all three might turn
my head with $300.00 total...Bob on L. Island.....
Pse remove the (ns) from my adr..Thanks.....

5059. Getting an "ARC-5" Transmitter On the Air.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-28 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36FE7279.FD56FC6B@ix.netcom.com>
Source record: 86900

I've had about a dozen recent requests for this,
so it's time to post it for general information again.
Copied from a letter I sent to a fellow mil-radio sufferer ;-)

If I get a few requests for power supply information,
I'll post it along with diagrams on my web site.

I've cleaned out quite a few soldered-in rear connectors. They're
just hollow tubes so if you have some solder wick or a solder
sucker, you should be able to get them cleaned out....

My first "dit" on the air (1972) was a BC-459 and I've been an avid
collector ever since. At the time, I followed all the "conversion"
articles, not knowing any better, and hacked-up quite a few.
Now I appreciate the history and romance of these old war heroes.
I've restored many and put them on the air. My first contact with
a complete-everything-dynamotors-too 274N rig was on 75 meters.
I fed it to a Swan Mark II amp so it was kinda loud for an "ARC5" ;-).

Now I have several complete sets working.
The only un-original part is the T-17 microphone element,
which I replaced with a telephone element.
The T-17 elements are very insensitive, which was fine
in the cockpit of a P-47 but not good in a ham shack.

Here's a few tips they didn't tell you in the conversion books:
All the talk about TVI in these rigs is pure, unadulterated B.S.
I've done the work with an IFR COM-120 and other instruments
and it just ain't so.
I think some person just repeats what he's heard said, etc.
The output tank was never designed to tune a 50-ohm antenna.
Hams typically ended-up with zero loading coil, full coupling
at the link, low power and too-high harmonic output.

The correct way to tune for a 50-ohm antenna is to put
a capacitor in series with the antenna lead before the coax.
If you don't have the external antenna switch with its
vacuum cap, you can use a high quality 1500V or better
NP0 cap. It must be NP0 because the cap will dissipate
some heat and if it drifts it will detune your tank and
cause chirp. Just solder it in place of the lead between the
tank link coil and the loading coil. About 50 pf for 40 meters
and around 75 pf for 80 meters. This will give you full output
at about 2 o'clock on the link and around 1/3 rd of the loading
coil, if memory serves. I've made extensive measurements with

hi-tech comm equipment and the transmitters are cleaner then modern
synth rigs when tuned properly. You can also use a 4:1 "UNUN"
toroid. This will eat a little power but works fine and
you get to watch the RF ammeter in the BC-442 swing ;-).

The only "modifications" needed to a Command transmitter if you're
not going to use the whole set-up are simple and 100% restorable.
As far as I know, they were first suggested by "Boatanchor Bob."

1. (Except this one. He and I disagree a little here.
He's never found a bad one and I've never found a good one!
Probably because he's a nicer person then I am ;-).
Replace the three capacitors in the bathtub on the back.
Even if you think they're good, they're bad. Trust me on this.
Leakage in this bathtub cap causes big headaches.
If you're not crazy like me (I open the bathtub, replace
the caps then seal it back), here's an easy way-
Snip-off the leads of the bathtub cap, leaving the wires intact.
Coat them with insulation. "Liquid Tape" by GC is good and available
at most electronics parts places, or just use tubing.
Leave the wires where they are as their distributed capacitance
is part of the design.
Get some of those little mylar .047s from the parts house.
They're about the size of a pencil eraser. Trace the wires from
the bathtub to where they connect, then solder the cap between
there and the nearest ground.

2. Unsolder one lead from the antenna relay. Roll the spring
contact from the loading coil around so it's always in contact.
Either put some Cramolyn on this contact or polish it as
detailed below.

3. Check the selector relay and make sure that the osc. B+
contact makes before the 1625 cathode contact. Carefully bend
them to make sure. You key the rig with this relay.
Put a "spike killer" diode across the relay coil winding
(anode to positive voltage lead) to keep the inductive
kick off the filaments and keying leads.

That's it. All the hole drilling and output hacking and
"de-TVIing" of the 50s and 60s was completely unwarranted.

If you really want to make it easy to tune and remove a
source of possible "chirp," here's a good exercise.
This is some work but well worth the effort-

All the roller coil assembly metal parts (less screws)
are plated in silver. This gets oxidized (that black stuff).
When you're loading the rig, you'll notice "intermittent" power
out as you roll over the gunk. If your loading point is
cruddy with this black stuff, it will heat when you key
and change the loading enough to introduce some chirp.

Go to Wally World and get some cream silver polish.
Don't waste your money on the "dip" stuff.
Put a towel or other "parts catcher" on your bench.
Completely disassemble the roller coil unit.
The leaf-spring contact on the coil axle (ceramic support end)
needs to go back right-side-up, so you might want to mark it
or just notice how it goes back in.
Use a linen or other lint-free cloth to polish the coil,
roller bar, roller, axle leaf spring contact etc.
Use a "Q" tip to polish the inside of the roller wheel as well.
Once all the crud is polished away, rinse off all the polish
with clean water and allow the parts to completely dry-
especially the coil. Don't want water under the turns.

As you reassemble, lubricate the thumb-wheel end and thumb-wheel
axles with petroleum jelly or graphite. Do not lube the
ceramic-to-coil joint, but do lubricate the roller coil axle and
leaf-spring contact with paste Cramolyn or other
good contact lube. Be careful not to overtighten the screws
that are threaded into the ceramic!
Just finger-tight them and lock them in place with some
paint or fingernail polish. Seal the roller-bar screws
with paint as well. Now enjoy easy tuning.

On "chirp:" This is a classic MOPA rig. While you can expect
some small amount of chirp, I've got many transmitters in which
it is difficult to hear any at all. I've never had one that,
after I finished restoring it, had what I call "bad" chirp.
Noticeable chirp in and "ARC-5" transmitter can usually be
traced to a few sources.
Here they are in order of their usual appearance:

1. Poor power supply regulation.
Your supply needs guts enough to maintain 500-600 VDC at 180 mils
and 24 VDC at about 2.5 amps.
(if you don't want to use DC on the fils, put a diode and
filter cap at the relay)

2. Leaky bathtub caps. Reduces osc. drive, messes with
B+, reduces grid bias to the 1625s. See above.

3. Cruddy output tuning network or antenna connections.
Anything that changes the loading- like heating the crud
between the roller and coil- is going to pull an MOPA rig.

3. Low under-load emission in the 1626 Osc.
Swap it out with a known-good one.

4. Grid emission in one or both 1625s. Especially
noticeable in one that's been run at 800+ volts.
Swap with known good ones.

I've seen changed resistor values in the osc. stage
and misc. other stuff, but these four are the usual bandits.

While I've heard of the other mica caps going bad, I've worked on many dozens and never seen it happen. I've also never seen that custom "button" cap go bad, though I've heard of that, too.

I hope these tips will be of value to you.

Good Luck with it!

Hello, I have the following literature that is out of print,
and very hard to find. These are very high resolution LASER
monochromatic reprints of the rare originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices INCLUDE POSTAGE, in the
continental USA. Others by actual quote.
Thanks, and if you need tubes, visit our sister screename,
Tubecntral@aol.com

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2,069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"
price update for Dec. 6, 1946.Another excellently illustrated info
source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951
25 pages crammed full of information IN DEPTH! Has everything you
ever wanted or needed to know about running these tubes, a real

nicely illustrated easy to understand manual, Price 10.00

The BC-655 is a WW-II era low-power transmitter designed to act as a "target" for radio direction finding sets. It transmitted a signal between 17 and 158 MC. You put it out in the field and used its signals to calibrate your direction finder receiver's indicators. Was used with SCR-555, SCR-575 and RC-93 sets. Manual is TM 11-4050.

This is a rare one in excellent condition. Very few were built. Using only high quality Johnson ceramic caps and Roller Inductor. This tuner handles 2KW output. It has a built in wattmeter and SWR 200Watt and 2000Watt and it has a bypass switch. Outputs for coax or longwire. Case is wrinkle black and front panel is black. No dings no scratches. The counter is very smooth. All connections inside are made using large RG8 coax. Tunes all HF bands $295+shipping.

I got a Precision Apparatus Series 924 Electronamic Tube and Set Tester,
but need the manual and schematic. Where can I look for it or find
someone who'd have one? Please use email reply: n3cs@qis.net

Tnx!
Chris

I think we are going to be putting that theory to the test here shortly,
Gary. I die a thousand death's when individual's see us as intruders on
foreign soil, thinking that we as Americans 'go blindly' while others burn
our flag in retaliation.

Burn my flag today... Tomorrow I will 'still' have the courage of my
convictions to stand my ground knowing that for all it faults, this country
is 'still' the land of milk and honey, and if other's could, they too would
model their government's after that of ours.

The unarmed sheep are on the ground now, and I think they are being lead to
the slaughter!

Not sure why you would need a special license. Go to your local state
store or wherever spirits can be purchased and buy a bottle of 190 proof
grain alcohol. It's as close to pure ethyl alcohol as can be bought.
If there was a bottle of 200 proof, when the cap is removed, the proof
drops. Alcohol sucks the moisture right out of the air. Or get 120

proof vodka, it will likely do as well. I use it to dissolve glue and stuff.

What is left over of the 190 proof you can cut it with an equal amount of water and end up with about 85 proof vodka.

For goodness sake don't rely on guidance you might
get on Usenet where electrical safety is concerned!

Buy a copy of the NEC or a guide based on it, for example
ISBN 0827383509 House Wiring With the National Electrical
Code : Based on the 1999 National Electrical Code
by: Mullin, Ray C.

Hints - wire guage is determined by current, not voltage
nor power. Wire guage must be related to length of run
and breaker rating.

The above is not engineering advice, we have
no engineer/client relationship.

Hi OM:

Although I don't really want to publicize this company as a last resort you can get a 51S-1meter from Surplus Sales of Nebraska for around $80.00 I know they are not cheap but they do have 'em if you can't find one here for less.

Actually SSN is no more of a rip-off than your local car dealership - as witnessed by the exhorbitant price of some replacement parts.

Good luck!

I am a little surprised that these would be auctioned on Ebay (I was
not able to find the link quoted). The collector price for one of
these in working condition, and reasonable but not perfect
cosmetically is $5 - 10, maybe a bit more sometimes, in this country.
Add shipping and it is hardly worth the exercise.

BTW did this item sell and if so what for?

Henry Black gave good advice throughout, but he neglected to specify if the 220v line should be 50 Ohms, and the 110v line 72 Ohms impedance,...or is it vice versa? I'm pretty sure though, that all green ground leads are 300 Ohms...all us older gentlemen get a little confused.

If I were to give advice, I'd say hire a licensed electrician to handle the whole job, and concentrate on your "Sky-Wires".

Source record: 86792

I did the 500 Hz mod with no problems. I first used hook up wire and immediately noticed some leakage so I change the cable to sub-minature coax. I also used a sub-mini SPST switch drilled through the front panel. It works very nice - SSB comes through nicely on 40 meters.... but the real improvement comes on 15 meters. Having a wide bandwidth helps me copy CW since there is not the QRN noise on 15 as there is on 80 and 40.

EVERY HW-16 chirps. This is because the power supply is shared with the RX -and- it is not regulated in any way. During my first week I got three (3) OO notices telling me about "my"
chirp problem... (despite the fact that CO stations are about 20X worse!)

I add a voltage regulator tube to the 6CL5 oscillator. I opened the B+ going to this stage and tapped off the voltage from the RX section of the power supply... The tube is mounted in the space just to the right of the 6GE6 final... chirp all gone now....

You are correct about the HW-16 rig. I bought a Ten Tec Century 21 (Analog) in the hopes it was a better CW rig but frankly for me it isn't...

Yes it has more bells and whistles (and bands!) but the HW-16 still is the one CW rig for me... I have a VFO but I still use my old FT-243 xtals...

This used to be my novice rig 27 years ago...

can you tell?

Source record: 86946

Hi,

I'm in the process of wiring my new ham shack and I'm going to include a 240V circuit for use in the future when I pick up a linear amplifier. My question is what guage of wire would be recommended for this 240V circuit? Is 12 guage wire sufficient? I also am keeping in the back of my mind that I may want to run some higher power AM gear at some point in the future. Anyone have suggestions on what I should use?

Thanks for any and all suggestions!

Brian KB8IIC

>I've heard there are mods out there for the venerable old HW-16. The one I
>am particularly interested in is the one that makes it full tranceive
>without a remote vfo or crystal. However I'm interested in anything you've
>got.

Hello John,

Here's a list of mods from QST, plus the product review:

Jan 1968 page 53 - Product Review (not as complete as current product reviews,
but still interesting)

Aug 1972 page 51 - Putting the HW-16 on 20 Meters (H&K) - Converts the 15 meter
bandswitch position to 20 meters.

Nov 1974 page 20 - Adapting VFOs for the HW-16 - Covers using VFOs other than
the HG-10 with the HW-16

Nov 1975 page 35 - Modifying the Heath HW-16 from 15 to 20 Meters - Converts
the 15 meter bandswitch position to 20 meters. Similar but not identical to
August 1972 article.

May 1977 page 48 - Sidetone Level Adjust for the Heath HW-16 (H&K) - Adds a
sidetone level control - 500 ohm potentiometer. Saves your ears, particularly
when using 'phones.

May 1978 page 29 - Sunspots and the HW-16 - Converts 40 meter bandswitch
position to 20 meters

Aug 1979 page 50 - Help for the Heath HW-16 (H&K) - Improves 15 meter
performance by reducing pi-network coil inductance.

I haven't tried any of these, so I can't comment on how good they are. But all
of them seem to be theoretically sound. All of the HW-16s I've encountered were
somewhat marginal performers on 15 - I'd convert to 20 if I had one today.

One conversion I have done is to replace the original 2 pole IF filter with the
4 pole filter found in the HW-101 and SB series Heath gear. Improves the skirt
selectivity of the receiver. The conversion consists of removing the existing
filter, fabricating a bracket to hold the new filter, and installing 2000 ohm
resistors and .001 ufd capacitors for the second mixer plate and first IF grid

circuits.

The HW-16 is not really a transceiver in the strictest sense. It's actually a receiver and transmitter in one box with a common power supply and a control system. Making it into a true transceiver involves replacing the first 6CL6 with a dual conversion heterodyne system - two mixers, a crystal oscillator, a bandpass filter and a tuned circuit at the signal frequency. Care has to be taken to avoid spurious outputs. Not a simple job. I haven't seen such a conversion, but would be really interested if one exists.

5144. The WW-II Era RCA Light Aircraft Radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-29 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36FF268B.4BA145EC@ix.netcom.com>
Source record: 86955

(I've also collected these for a long time)
(Posted to the list for general information)

Introduction to WW-II Era
RCA AVT and AVR Series Light Aircraft Radios.

The RCA AVT/AVR series of radios were introduced in the mid-30s
for use in light civilian aircraft. Many models of the line were
pressed into service early in the war and officially adopted later.
Most served in either light spotter aircraft, such as the
Stinson L-5, Tailorcraft L-2, and Piper Cup, or as "ferry" radios.
They were all very small, light weight, extremely
simple in design, easily produced, and very effective.

"Ferry Radios"
Military aircraft built in the U.S. were "ferried" to their
units before final outfitting. Ferry pilots used the "radio range"
system while crossing the U.S. and most allied countries,
and needed a means of plane-to-plane and
plane-to-tower communications.

The Radio Range system used navigation beacons in the 200-400 KC
range and a "standard" tower-to-aircraft frequency of 278 KC.
Aircraft-to-tower transmissions were usually on 3105 or 6210 KC.
Also, the ferry pilots needed a "standard" radio channel
for plane-to-plane work-- usually also on 3105 KC.

U.S. Army Air Corps units in different locations tended to use
different types of equipment and/or frequencies.
A P-47 for instance, delivered with an SCR-522 in it would have
to sit on the ground for refit if that squadron
was using the SCR-274. Better to deliver the aircraft sans radios
and let the ground crews install the proper set in-theater.

To solve these problems light, easily-removed radios were
tacked into the aircraft before it's delivery flight.
Once the aircraft was delivered, the "ferry" radios were removed
for the trip back to the factory and re-used on the next flight.
The "tack in" method was often very primitive, and could be
as simple as bolting the radios to a plywood board which was
aid on the floor of the aircraft. Sometimes it was strapped
under the dash. The practice of "re-use" over and over again might
explain the rough condition of most surviving examples.

Light-weight, low power radios were also required in unarmed
spotter and light transport aircraft. These aircraft could overfly a

section of the battlefield and direct or correct artillery fire,
air strikes or give "early warning" of advancing enemy units.
They were usually fabric covered and capable of low passes with
high maneuverability at slow speeds. General Patton's personal
light transport aircraft was outfitted with a set of these RCA radios.

These extremely light aircraft usually lacked an electrical
system of their own. Providing power to ancillary equipment like
radios could be a problem. This was often solved by useing a
wind generator that was mounted on the underbelly of the aircraft.
It could provide power directly to the radios, or charge a battery
that fed a vibrator power supply. Often the pilots simply
carried several fully-charged batteries along.

I don't have a complete list of RCA AVT/AVR sets that then existed
but I can discuss these following which are in my collection.
The list might serve as a starting point from which
we might build a more thorough accounting.

Receivers:
AVR-7 (uncommon).
A real 1930s multi-band "Rube Goldberg" radio.
A flat panel about 5" x 7" inches with the controls and tuning scales
mounted in the cockpit. It was connected via spline shafts and cables
to a black box bolted somewhere on the firewall.
The band-change control is a "push-pull" cable gadget from the
panel to the electronics package,
just like an old automobile "choke"control.
Appears in a 1936 book on aircraft radio.
Military use (pre-war?) documented by a yellow
Signal Corps inspection stamp on the example in my collection.

AVR-15 (uncommon).
This radio looks just like the more commonly seen HF model AVR-20,
except that it's a "radio range" receiver tuning 200-400 KC. It has a
fixed-tune position for 278 KC, which was the most common "tower to
aircraft" frequency in the 30s-40s.
Documented military use TO 08-45-17 dated July 1944.

AVR-20 (common).
Most commonly seen AVR receiver. Mounted under the panel or on the
ceiling. 2700-6700 KC in a single band. 1930s-40s civilian aircraft
usually talked to the "tower" on either 3105 or 6210 KC and the tower
responded on 278 KC. These receivers allowed aircraft-to-aircraft
communications. A surprisingly good-soundng receiver once recapped.
Military use documented in spotter aircraft
in North Africa 1943 (photographic), D-Day (photographic),
in military manual TO 16-45-15 July 1944, and
in the Stinson L-5 maintenance manual.

AVR-100 (uncommon).
A "mount in the panel" radio similar to the BC-1206, but

even smaller then that radio. This receiver had two bands-
BCB and BEACON (radio range), plus a fixed-tuned position for 278 KC.
Military use documented by Signal Corps inspection stamps and
inclusion of spare parts in Signal Corps SIG-5 parts catalog 1945.

AVR-101 (uncommon).
Also a very small "mount in the panel" radio, this set tuned the beacon
band 200-400 KC. Military use documented by Signal Corps inspection
stamps and inclusion of spare parts
in Signal Corps SIG-5 parts catalog 1945.

AVR-103 (uncommon).
Single band "radio range" receiver, 200-400 KC. Mounted "under the dash"
with an odd, tilted front to the chassis that displayed the slide rule
tuning dial to the pilot. Much larger then the 100/101.
I have found no evidence of military use.

AVR-104 (scarcity unknown).
A post-war set (1957). Two parts with a control head/RF amplifier
unit that mounted in the panel and a cylindrical IF/AF electronics
package mounting elsewhere using shock mounts. Interconnecting cable.
200-415 KC with a fixed-tuned position for 278 KC.
Navy use documented by NAVAER 16-45-622.

Transmitters:

AVT-15 (uncommon).
"Big Brother" to the better known AVT-112, but only physically.
The AVT-112 is a much better design, but this one "looks" better.
Internal vibrator power supply. 2500-6700 KC two channel
crystal control. Crystals can be changed by unsnapping
the lid on the top of the transmitter. 6L6 oscillator modulated
by a single 6L6 provided about 7 watts out.
Tunable from the front panel with a built-in RF meter.
Most often used with the AVR-20 receiver.
Military used documented by Signal Corps inspection
stamp and in the Stinson L-5 manual.

AVT-111 (very uncommon).
Same size as the AVT-112 but stripped-down.
Permanently installed crystal at 3105 KC which could be
doubled to 6210 KC. No tuning controls available to the pilot
as all tuning was done through capped access holes
through the front panel. Only controls on the front are for on/off
and switching between a trailing antenna for 3105 KC,
fixed antenna for 3105 KC and a trailing antenna for 6210 KC.
This lack of tuning flexibility doubtless caused
very limited range and may be the reason this cheaper radio
wasn't produced in the numbers of the tunable transmitters.
I haven't found any documented military use.

AVT-112 (common)
Very well designed and compact transmitter. Crystal control with xtal socket on the front panel. 2500-6500 KC at 6 watts out. Fully tunable from the front panel. 6V6 oscillator, 6V6 power amp modulated by push-pull 6V6s. Dual scale tuning eye tube displays both power out and plate current. Despite it's excellent service, they did have a problem with breaking off the bakelite "tabs" used to slide the antenna tuning core. Excellent audio out of this rig, even with a carbon mike. It and the AVR-20 are both a bear to recap! Note that most RX/TX switching in this set takes place in the AVA-126 vibrator power supply pack. Military used documented in North Africa 1943 (photographic), D-Day (photographic), in a military manual TO 16-45-15 July 1944 and in the Stinson L-5 maint. manual.

Typical Accessories:
AVR-15: AVA-51 storage battery box.
AVT-15: MI-5883A remote control panel (Unobtainium).
(On/off, mike input, channel select)
In installations using AVT-15/-112 and AVR-15/-20:
AVA-126 power supply (uncommon).
AVA-120 Trailing antenna reel (VERY scarce).
Crystal rack holding 12 crystals and with
a canvas cover (rumor of one surviving).

There have been some reports of the AVT-112/AVR-20 set using storage batteries without the AVA-126, but this is unlikely since most of the PTT switching for this set is located in the AVA-126. It is much more likely that these reports concern the AVT-15/AVR-20 sets, since the transmitter's vibrator supply was internal and the receiver could be powered from the transmitter. This set could operate from a single 6 or 12 volt storage battery.

73 DE Dave Stinson AB5S
<arc5@ix.netcom.com>

*****
editorial comment)
Dave's classification of "common" is in comparison with other radios of this same series and may not necessarily reflect your ability to find one of these radios.

Two ground versions of these radios are known to have been produced. Both were the result of the re-packaging of the basic AVR-20 receiver, combined with AVT-112 into a common single cabinet. The transmitter was modified for Master Oscillator frequency control rather than the typical crystal control and provisions for CW were added to the transmitter and receiver. The resultant radio was the SCR-288(BC-474).
The second version is believed to be a very early BC-474 which included the transmitter and receiver in separate cabinets vice a single/common one.
Only one surviving example has ever been reported and the details on it are very sketchy.

....although these aircraftradios saw extensive military/combat use,
none were ever affixed or assigned official military nomenclature...

Dave,
Thanks for the ARC-5 pointers! I'll print them and save them in my
old CQ Surplus modifications book. I've hacked a few of these TX's
in the past for parts (note they were already messed up, I've never
butchered a clean one). I hope some day to try putting one on the
air. I've thought about it off & on ever since one summer at a Scout
Summer Camp when I met one of the kids who had his whole ARC-5 only
station with him. Sure looked like fun!

There is also another mod for it to receive SSB. All that's required is mounting a SPST switch to the chassis and running two wires to the P.C. Board. If I saw a picture of the trace side of the board, I could tell you exactly where to run the wires.

Good luck!!!

Hello group,

Picked up a very nice Globe Scout 65 at the Madison, OH hamfest this weekend. Can anyone supply me with information about this TX? I did not get a manual with it.

If you have one of these would like to know some basic info:

The plate current setting?

What are the two antenna jacks on the rear? I noted that one as a inductor conected to it, for different antenna types perhaps (different feedpoint impedances).

Oscillator seems unstable on mine, does not want to start at all times, need to tweak the oscillator variable cap to get it to run.
Tnx!

> Christopher Zeman, KB9RHA

Hello,

That's one I haven't heard of. The change must involve bypassing the 500 Hz filter in the second (3395 kHz) IF.

Personally, I would be very hesistant to make such a change. The skirt selectivity of the receiver would be degraded by any leakage paths around he filter. Wiring in an SPST bypass switch could provide such a path around the filter, thus degrading CW performance.

The HW-16 is perhaps one of the best, if not THE best, "value for the money" ham rigs ever produced. Its purpose was to give the Novice the best possible CW rig at the least possible price, AND be easy to build and operate. The HW-16 design eliminated every feature that was not essential to good Novice CW operation, yet included features not found in rigs costing much more. That's why there is no S meter, no AGC, no wide filter, no transmitter VFO, and such limited frequency coverage (only the first 250 kHz of 80, 40 and 15 meters). Yet for under a hundred bucks the newcomer got a stable, sensitive, selective, slow tuning receiver and a "Novice gallon" transmitter with full breakin and sidetone. More than three decades after its introduction, the HW-16 is still a pretty good CW rig, given its limitations.

Historical note: In 1967, when the HW-16 was introduced, Novice HF privileges consisted of 3700-3750 kHz, 7150-7200 kHz, and 21100-21250 kHz, CW only. Transmitters had to be crystal controlled, and power input could not exceed 75 watts.

See ad below -- Astron power supply is SOLD, rig and tuner still
available.

FORSALE - MINT Icom 735 HF rig, MFJ 949E tuner

I have an absolutely mint condition (still has the
protectice plastic over the slide swithces!) Icom 735 HF rig that
I'd like to sell. The rig includes the optional 500-Hz
CW filter, original hand mike with up/down controls, original
manual, and all original packing. I am a non-smoker. Also have
as-new MFJ tuner and Astron power supply:

ICOM 735/cw filter/mic $575.
MFJ 949E tuner 100.
Astron RS-35A ps 120.

Entire package for $775. + shipping.

Joe Levantino
KB2FSH
(732) 949-0664

Rig is located in Monmouth County, NJ.
$550 plus shipping.

For your Hickok or military tube tester- the "83 eliminator". Remove the 83 rectifier tube and plug this in the socket, that's it! No more glowing fuse lamps, or expensive 83s to replace. No modifications required to install! High quality part, $12.50 each

Priority Mail shipping up to 2 lbs. is free on orders of $50.00 or more, otherwise add shipping of course (usually $3.50 for USA). Insured shipping is slightly more. Please e-mail me if interested. Thank you very much.

Jim McShane

5171. FS/RME 70 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-29 00:00:00 UTC
From: mrhro@pdq.net
Message-ID: <3MRL2.48$Bt.3848@news13.ispnews.com>
Source record: 86982

Selling this pre World War 2 classic. The RME 70 is jet black, with a very unique 2 dial tuning setup. Large S Meter lights up green..

Physical condition is above average, but not mint. 50 years will do that .A piece of decorative trim is missing, but this doesn't destroy the receiver's looks. Paint is original, showing signs of wear. Some tarnish around original control decals. Original speaker is included, along with the rare DB-20 preselector. A copy of the schematic's also enclosed.

Receives on every band, from Broadcast to 30 Megacycles. AM audio is clean and nearly distortion free. A BFO is part of the circuit, you can tune SSB and CW, patience please.

Price is $350 dollars, we'll discuss packing and shipping.

Hope you can add this fine receiver to your collection.

John Orahood

Not only do they provide excellent reception, but you can also build
awesome biceps just by moving them around the shack!

My R-390 (a mystery set, as the tag is missing) is a personal
favorite. I picked it up for about $100, give or take, plugged it in,
and have been using it since. I recently reconfigured my antenna
system, so am currently using a 12" piece of wire hanging out of the
Unbalanced antenna connector. I logged 18 stations on 49 meters this
evening. :-)

Keep 'em burning!

I also have an R-390A that Rick brought back to life, and I suspect it
is better than new. I guess that a new radio like that today would
cost Uncle Sam well into the five figures. Rick, by the way, is in
Toledo Ohio.

Hello Bill,

Some thoughts on what could be improved in the R-390A as a ham receiver:

1) The tuning speed is too fast. I like 4-5 kHz per turn for CW work. Most
'390s take too much torque, as well.

2) Not enough choices of CW selectivity

3) No matching transmitter that will transceive.

A very short list for a receiver whose design is as old as me.

Hello All:

Doing spring cleaning and organizing have the following for sale;

HeathKit HW-101 SSB Transceiver, with Manual.
No power supply or mic. Unfortunately I have only 1 power supply
and mic. and I need them for other rig. This one does work. Has been
used, in fair to good condition. Could use a little cleaning. One belt
broken.
But in over-all good condition.
asking- $100.00 plus shipping.

Hallicrafters SBT-100. Has all cables, plugs, remotes and crystals.
However, no mic or manual. Does work, brought it up slowly on variac.
In good condition. Made in early 70's. A para-military HF rig, with front
rack handles. Covers 10 thru 80 meters. 85 watts pep.Solid state, except
for
tube finials (which are good).
$50.00 plus shipping.

TUBES: 2 RCA 6KD6 transmitting tubes. NOS.
Will selling as pair or seperate. Asking $20.00 each.
plus shipping. They go for $30.00 with most suppliers.

Have many more sweep tubes and recieving tubes for sale. Will post later
in the week.

Thanks for reading.

Source record: 86815

I'm willing to be corrected on this, but the Stewart-Warner unit's I've seen have a 'less stout' mechanical gear train than does the other R-390A varients. By this I mean the gear train appears to have less metal in it. Otherwise I've seen little or no difference in performance as compared to the Collins and Motorola designs.

Others report that the older R-390 without the mechanical filters has better sounding audio on AM stations.

As far as weight is concerned, this is a PLUS since it classifies the R-390 as a true boatanchor :-)

5191. replacements for 3TF7 Ballast tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-30 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <3700F213.1064@ix.netcom.com>
Source record: 86816
Cross-posted to: rec.radio.amateur.boatanchors,,rec.radio.swap

Thank you for your interest.

I've had two 390-series, receivers fail where the
3TF7 ballast tube had opened up, causing
a failure of filament voltage to the
PTO, and BFO oscillator tubes.

Rather than search for more ballast
tubes at the (then) price of around
$60.00-$70.00 each, I explored other
ways of providing the necessary
12 volt filament voltage to the
series-connected 6-volt tubes that
run off of the 25 volt filament
supply in these sets.

I found two different vacuum tubes
that have the same voltage and
current requirement as the
the 3TF7 ballast tube (12.6 v @ 300ma)
and the current spec is the same as the
filaments for the 5749's.

I did the following:

1: remove the 3TF7 ballast tube
2: rewire the two leads to the socket of the
3TF7. Move the lead on pin #2 to pin #4.
Move the lead on pin #7 to pin #5.

3: plug in <either> a 12BY7A, <OR> a 12BH7 into
the modified socket that was used for
the 3TF7.

You are only using the filament of the tube,
however 12BY7A's are a lot more common to
find (and cheaper) than the original ballast
tube, that is in reality just another type
of filiment to drop the supply voltage to
the PTO, and BFO oscillator tubes, type 5749.

Yes, other substitutes for the 5749 could
be found that use 12 volt filaments and
not 6 volt, but I feel that A.C. power line
fluctuations would affect the two oscillator
circuits a lot more if each of the tubes are

using 12 volt filaments.

"If the idea is stupid, but works, then
it isn't so stupid" :-)

Trish

True, however a big QRP fan who had a little extra jingle might indeed fork over $500 for the experience of building what is surely the most popular QRP rig ever made. Although I'm not that guy :)

I have several ARRL publications and full-years of QST for sale. USPS 4th Class Bookrate can get volumes to your door for under $5 CONUS.

91 ARRL Antenna Book 16th ed Excellent $18
74 ARRL Antenna Book 13th ed Good $14
78 ARRL Hints and Kinks 25th ed Good $4
72 ARRL VHF Manual 3rd ed Very Good $10
48 ARRL Course Radio Fundementals 3rd ed Very Good $17
42 Editors & Engrs Radio Handbook 8th ed Good $15

QST full-year volumes:

98 VERY GOOD $8
97 EXCELLENT $9
93 EXCELLENT $9
92 EXCELLENT $9
92 EXCELLENT $9
91 EXCELLENT $9
91 EXCELLENT $9
90 EXCELLENT $9
89 EXCELLENT $9
87 VERY GOOD $9
86 GOOD $8
85 VERY GOOD $9
85 GOOD $8
75 VERY GOOD $9
74 VERY GOOD $9
72 VERY GOOD $9
72 VERY GOOD $9
71 VERY GOOD $9
71 VERY GOOD $9
70 VERY GOOD $9
70 GOOD $8
69 GOOD $10
68 VERY GOOD $11
62 VERY GOOD $11
61 VERY GOOD $11
59 VERY GOOD $13

If that isn't enough, I have many partial years and loose issues. Be glad to help fill out your collections.

Thanks,

73 es cul Bill N4ALG

Source record: 86819

The R-390 is an overdesigned mechanical
nightmare that is the direct result of the military-industrial complex. In my
book a
fine receiver would be simple enough for
the owner to maintain and operate. The
only owner that could ever appreciate the
R-390A would be Uncle Sam. In the
Government's concept of a receiver...it
worked fine. Easy to operate - - sure - -
they were parked on one frequency.
Maintenance a problem - - no - - you had
half a warehouse of spare modules and
half a batallion of technicians on-hand to fix
'em.

From a civilian-use perspective they are
cumbersome left-overs from the cold war.
They should all be dropped in the nearest
nuclear silo and cemented shut. I hate the
darn things!

Respectfully submitted,
Pat - - WB9GKZ

Collins 75S-1/32S-1/516F-2 for sale.

75S-1 CCA very good condition, has normal complement of band xtals. Spinner knob slips a bit when turned rapidly, but is fine at normal tuning rates. No CW filter. No Noise blanker. Includes AC cord and copy of 75S-1 manual. Front panel is blemish free and knobs are correct style and clean. Case and trim ring have the usual small scuffs and scratches. This receiver has been in a nicotine environment and needs to have that cleaned off, but once that is done it will be a very nice looking 75S-1.
Collins 32S-1 transmitter for sale.

32S-1 CCA good condition, as all band xtals have been removed by a previous owner. I popped a 14, 21, and 28 MHz band crystal in the transmitter and it tuned and loaded perfectly into my dummy load, and had good SSB modulation with a MM-1 microphone (NOT included!). original 32S-1 manual included. Front panel is blemish free and knobs are correct style and clean. Case and trim ring have the usual small scuffs and scratches but overall this is a nice looking 32S-1.

516F-2 is installed in cabinet. Cabinet has had speaker added by a previous user.

$850 plus shipping, US shipping destination only, please.

Win Dooley WB5KOM

I have at least 200 plug-in relays or choppers,mil-spec, unused. All are in sealed metal cans about the size of a mini tube and plug into a 7-pin mini tube socket. They have a coil and a SPDT contact which will close with just a volt or two on the coil. I have three different makers, but all look interchangeable: 1) Hughes 992200-1, Airpax C-747 2)Oak Chopper type 610, with same Hughes p/n and 3) Collins 54-1021-00, Airpax 300. All are unused. 5/$4.00, 10/$7.00, 25/$15 or 100/$50. Shipping extra. NOTE: Please REPLACE the "ns51" in my email with "wor" to make "worley" or call 334-347-5281.

5203. LF-AM-Aircraft receiver: AIR-O-EAR

From: Marco Ciocca <marco@pa.uky.edu>
Message-ID: <3701284E.958CE5F@pa.uky.edu>
Source record: 86828

A couple of week ago, after attending a hamfest, this followed me home:

Aircraft receiver AIR-O-EAR I couldn't pass it up, with a name like
this :-)
Model 711-WN
Nova-Tech

The dial indicates coverage in
LF (200-400 kHz)
AM
SW(1.6 -5 MHz)
Vhf(108-130 MHz)

On the bottom there is a label with the seller address (Nova-Tech Inc.,
1721 Sepulveda Blvd, Manhattan Beach, CA), the tube lineup (12AX7,
12AU6, 6BJ6, 12DT8, 12BA6, 12BE6, 50EH5), and model and serial # (Model
4b, serial # 130).

The controls are off-on-volume, tuning, band switch and squelch.

The am band seems to work ok, the others I don't know yet (I am a little
afraid of adding external antennas to AC-DC sets like this one).

Does anyone have any info on this receiver (date of manufacturing,
schematic, alignment instructions)?
Thanks a lot!

One can find the ad for the Air-O-Ear in "Flying" magazine, circa (+/-) 1957-63. Nova-Tech also built a 5 channel transmitter and tunable receiver for private aircraft during the same period. Your receiver was, arguably, the first commercial "scanner" for the aviation band. Notice also that it only goes up to 130 Mhz. In "those" days, only the big-boys (read: air carrier) used freq.s beyond 130 MHz, or for that matter above 126 Mhz. Channel spacing was 100 kHz, so poor selectivity was not a problem. I tried in the 60's to get a "book" on the transceiver for CAP, but Nova-Tech was unwilling to pass tech data on. Someone out there has the data, though, I'm sure!

I have a Narco Nav Com MK 12A. It covers 135.95 to 118.00 in 50KC steps plus 108.0 to 117.9 in 100KC steps. Other controls are volume, squelch, and ident.

Tubes are 6ar8,6ea8,6bj6x2,6cb6x2,6bh6,6ak5,7551,8106x2,6cw4
Also has a bunch of crystals.

I have too much debris here but could use 100' of ladder line in good, unused shape if anyone is up for a swap. Otherwise, it's rob the good parts and junk the carcass.

5211. broken bandswitch in Viking Matchbox

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-03-30 00:00:00 UTC
From: vogler@innercite.com
Message-ID: <7drlm0dfi1@nnrp1.dejanews.com>
Source record: 86836

Hello:

I just received delivery of a Johnson Viking Matchbox (275 W) in the mail yesterday and I opened it up for inspection. To my horror the front wafer of the 2 wafer bandswitch is cracked/severed. A piece of the wafer is "hanging" in free space held by the wire taps.

The question is, how do I fix it? Do I try and glue the cracked off piece back on, or do I replace the bandswitch?

The bandswitch is unique, it has a long shaft and the wafers are spaced such that one is placed under the front of the coil and the other is placed under the back of the coil. The spacing is accomplished by aluminum spacers and the spacing between wafers is approximately 3".

So if I wanted to replace this bandswitch, how would I proceed? It requires two wafers and each wafer needs 6 positions (1 extra to add 30 meters), 2P6T. Surplus Sales of Nebraska has such a beast. Is it possible to replace the shaft and spacings on these bandswitches?

Any help and suggestions would be appreciated.

73s,

Bill, K6QD

PS - Could posters also email me directly. My news feed at my ISP is flaky and I don't always receive all the news.

Bill:
I've repaired a number of phoenolic wafers with cryogenic glue and
graphite fibers.
Be sure the phoenolic is not saturated with cleaners oils etc. and dry.
The graphite material I purchased years ago for model aircraft use.
Adds lots of strength to the perimeter of the wafer and reinforces the
flat surfaces where needed.You need just a few strands about 1/16" on
the edge to do the job.

I work for a computer company and I'm amazed how some people ship
pack their monitors when they ship it back to us for service.
Some will put a 17" monitor in a 15" monitor box WITHOUT any padding
around the monitor. Some use wadded up newspaper for padding.
Some use boxes with cardboard so thin, it doesn't hold up.

It should come as no surprise that when people ship things that way,
we receive the item damaged. Fed-Ex, UPS, RPS, ... and other shippers
will not cover damages due to improper packaging. Nor will the
manufacturer cover damages due to improper packing.

I do have a gripe against UPS; When equipment is damaged and it was
packed properly, the UPS Claims Inspector comes up with every excuse
in the book to deny the Claim or they'll say they'll only cover up
to $99. .. Oh great, they trash $3000 worth of equipment and are
willing to pay just $99! So far, I've never seen UPS cover the full
cost of their damages. (Maybe the inspectors I run into are all
jerks or maybe UPS trains their inspectors how to avoid agreeing to
cover any claim.)

On the other hand, Fed-Ex does cover damages when it's their fault.
Fed-Ex overnight is VERY expensive; however they do offer a cheaper
2 day service.

I find the letters in the subject line "FA" to be a nice thing for
people advertising ebay articles. If I see FA, I just unmark the post,
and that's that--no wasted time, as I don't care to use ebay (I've used
it before, but the thrill of auctioning doesn't do it for me--I'd rather
deal with the seller directly).

I've noticed that the people selling things on ebay and then posting
stuff in this newsgroup have either used FA in the subject line, or
plainly said something to the effect, for auction on ebay. So, I have
no qualms about people using this newsgroup to post stuff on ebay.

For-sale ads for commercial ham gear, via ebay or otherwise, are not
appropriate on rec.radio.amateur.homebrew. Based on your earlier
responses to other people ("MIND YOUR OWN BUSINESS"), this and all other
ads for unrelated equipment you post to the group will be forwarded to
your ISP's postmaster and abuse accounts.

Source record: 86748

This receiver has its coils mounted in a cast aluminum "carriage" that runs on two polished steel rails on the underside of the chassis. When the band changing knob is turned, a rack and pinion arrangement makes the coil carriags move from side-to-side, bringing the appropriate coils directly under the sections of the tuning condenser (thus providing a low-loss path between them).

The 2-40-D, BTW, is one of my all-time favorite receivers...I still rue the day when I sold my last one. When properly aligned (and recapped), it's a very good performer up to about 20 mHz...falls off pretty badly above there.

If you can get the matching speaker, be sure to do so, as it is an electrodynamic model, I believe, with the coil being used a part of the power supply (a filter inductor). Someone correct me if I'm wrong here, please.

Good luck,
Walt

I agree with you Shawn. If I see FA I just don't bother reading the post.
If you visit rec.antique.radio-phono (or whatever it's called) there's as
much stuff for sale there as there are posts about other things. I will
grant you that since this is already being posted in rec.radio.swap, it may
not be as relevant in rec.radio.shortwave, but since he is putting FA in
there I don't think it's a big deal.

I have a TO-6 in excellent condition. This is the top of the line capacitor analyzer. It also has large enough transformers built it to reform electrolytics. It has an analog meter to check leakage and it is in beautiful condition. I have jpg pictures if you need to see it. This would make an excellent addition to any shack. $175+ shipping

Near mint 160-10 Meter transceiver with digital display, CW filter,
operator and service manuals. Very low hours...it still has the original
final tubes. No problems, a few documented reversable mods added from
Kenwood and QST hints and kinks. Two BNC connectors added on back to allow
external reciever. Asking $350. Local pickup in the Detroit MI area
preferred. I am the second owner (non smoker) and have had it since early
eighties.

I have 3 or 4 mil surplus modulator units from APS-104 search radar (likely from B-52 bomber - 1950s/60s vintage). These were used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays,transformers and other parts all in airtight aluminum canister. Also have copy of service manual. Unused, still in original box, collector's item, $65 (pick up only - exceeds UPS size limit) from southeast Alabama. 36330 zip. NOTE: Please REPLACE the "52" with "snow" to spell "snowhill" in my email or call 334-347-5281.

I've never looked in that particular box, but in the good old days, Centralab sold those rotary switches as kits of parts, and you could build almost any combination you could think of. The ceramic wafers went out of production in the 70s, and the phenolic type a few years later. The standard shaft was only 3 inches, but longer shafts were also available at one time. I suspect that your switch should disassemble (two 4-40 screws through the front, the spacers and the wafers) and individual wafers could be replaced. I would not expect the broken wafer to stay together even with good epoxy. Good luck!

I read somewhere that the Gonset Commander
AM/CW rig will do 160-6m, but all references I
found on DejaNews seem to suggest 80-6m, the
same as the Multi-Elmac AF-68.

I do see that the newer G-76 and G-76a models
were clearly 80-6m. Can someone clarify this for me
please?

Also, what are these rigs running for used these days
and what are the potential "gotcha's", e.g. hard-to-find
tubes, chronic hard-to-replace component failures, etc?

Thanks! & 73,
~~~

According to my reference, the Commander covers 1.7 thru 54 MC continuous. The Commander II is listed as continuous coverage from 160 thru 6 meters. Maybe the exact same range, but don't know for sure. In the case of the Commander, it says that 2 coils are provided for 10 thru 80 meters. For the Commander II, it says the same, plus it says you can use an external VFO for 80 thru 10 meters. Both models use a 6146 final. No idea what other tubes are used.

Source record: 86854

Gotta disagree about the CW selectivity issue. The R-390A was designed
primarily to receive CW signals and with a bandwidth selector that goes all
the way to .1 kc it does a great job. Audio recovery on voice signals
isn't the
best but, hey, this rig was created to intercept CW and RTTY...either ours
or
theirs!! I'll bet if you asked some ex Navy Ops or some ASA guys they
would
agree with me.

Bill,

I have a Ham Radio index that I put together just by copying the appropriate December multiple year indexes. It covers all 268 issues. The last year was a partial and I had to copy the table of contents for all those issues.

I don't know of a downloadable one. I've worked a little on scanning it and OCRing it but little luck so far. It would be a monumental typing task.

If you would like a copy of the Ham Radio Index I can probably get it copied for $6 plus a $1 for shipping. It is 30 double sided pages......Let me know...Rick...W5RH

Hello Brian,

First, it's a good idea to get some books on electrical wiring and the National Electrical Code. There are many details to be considered in doing a proper job. Safety is paramount, and you might need a permit and/or inspection. If you do not have experience in house electrical wiring, it is a very good idea to consult with someone who does, preferably a licensed professional.

Second, a lot depends on the physical layout of the shack/house. If your shack is close to the main electrical box, and it has several spare circuit breaker spaces, you might consider just adding on to the main box. But if the distance to the shack is considerable, or spare spaces are at a premium, it makes sense to use a sub-panel at the shack. The subpanel also gives you the ability to shut off all power to the shack by pulling a single breaker.

As a general rule, #14 wire is good for 15 amp circuits, #12 for 20 amp, and #10 for 30 amps. #8 is good for 40 amps and #6 for 60 amps. The wire will carry more current, of course, but circuit breakers come in those standard sizes. It is always better to use a heavier circuit than needed. The added cost of larger wire is trivial compared to the effort if you have to do it over again.

Current carrying capacity is not the only consideration, though. Voltage drop and light blinking caused by the intermittent load of a ham station can be real problems, so be sure to calculate the effect when choosing wire sizes. Poor voltage regulation can cause problems for an amplifier.

For example, suppose I use #14 wire to feed an amplifier that draws 1 amp on standby and 13 amps at full power transmit. The circuit is safe (barely) because it is not overloaded. (You might experience some nuisance trips from momentary surges, though).

But #14 wire has about 2.5 ohms resistance per thousand feet of wire. On a short run this might not be a problem. For a 200 foot run of cable, (400 feet of wire in the circuit) the total resistance is about 1 ohm. The voltage drop on standby will be 1 volt, but on full power transmit the drop will be 13 volts! (And that assumes there is no voltage drop from other causes). The amplifier may not perform well under such conditions.

Using #12 reduces the resistance to 1.6 ohms per thousand feet, or .64 ohm in the 200 foot run. The drop would be .64 volt on standby and 8.42 volts on full power transmit. #10 wire is 1 ohm per thousand feet, which gives .4 ohms in the 200 foot cable. The resultant drop on standby is now only .4 ohms, and at full power transmit only 5.2 volts.

In other words, the voltage regulation in the above example is 12 volts with #14, 7.68 volts with #12, and 4.8 volts with #10. All three installations, if done right, would meet Code requirements, but which one would you want to hook that expensive amplifier to?

Any more questions, just ask.

The ARRL has a complete QST index going back to 1915. It's accessible
via the members-only portion of the ARRL website
(http://www.arrl.org/). Alternative, it can be installed in your
computer -- in segments, as you buy the corresponding CDs -- with the
QST View (QST on CD-ROM) product.

I have the following Radio, and electronic equipment for sale. Will consider trades for Computer or Electronic EQ. All working last time tested unless noted.
Shipping is extra.
Thanks

Tempo-1: Tube type Ham Transceive with Power Supply.Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

Lafayette: HB444/25A Looks and works great. This is an all tube 25 channel base unit with a nice chrome trim all around. would rate an 8 in looks. I think the mobil mounting bracket is also included, with nice heavy cast alum mic. $125

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

Non Tube Items:

AR Inc: Stereo Amp, All solid state with the optional wood case.I would rate the appearance as an 8. $100

Traynor: Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Swan Phone patch: with hook up cords. This unit looks real good, but is also untested. As is $35.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $200 for both.

Bearcat 250 Scanner: Have two. One working and one for parts. $75 for both.

Bearcat 210XL and 220 Scanner: One of each complete, but not working. $25 each.

Kenwood MC 50 Mic: Works OK and comes complete with cable and input jack. $50

RICHCOM,

I am not generally a grump, but your method of posting to the newsgroups regarding items you are selling on EBAY is getting tiresome. If someone wnats to peruse EBAY and see what's for sale, fine, but parallel postings to the newsgroups is not appropriate, especially since you have no description in your posts, just a link to EBAY! Based on the number of items you've been selling and parallel posting here, you must be in the business of selling used equipment. In such case, you are violating newsgroup rules twice, once for your own gain, and the second by promoting EBAY.

If I wanted to look at equipment that is being auctioned on Ebay, I'd look on Ebay. But I'm not, so all these Ebay posts are just a waste of Usenet for me.

Plain "forsale" posts, even if inappropriate for the newsgroup in question, at least have some information about what is being sold and the asking price. Articles with nothing but a pointer to Ebay contain absolutely *nothing* of value or even interest.

I'm looking for a functional, unmodified R4B/TX4B. It doesn't have to be a cosmetic "10" - I want to use it, not put it on the shelf as a collectable.

Tnx - Al, WA2VEZ

5301. Re: QST magazine Indexes

The rec.radio.amateur.boatanchors FAQ site has the following:
From Beveridge to Oscar
indexes to back issues of QST, 73, Ham Radio, and CQ magazines
also an index of equipment reviews - hard copy or floppy disk
versions
DiDah Publishing
PO Box 7368
Nashua, NH 03060
603-878-3628

Info on magazines, manuals, parts, web sites, etc - all kinds of
neat groovy stuff about boatanchors can be found on the FAQ site:
